A Great Work.

TIRYNS:

The Prehistoric Palace of the Kings of Tiryns.—The Results of the Latest Excavations.

By DR. HENRY SCHLIEMANN,

Author of 'Mycenæ,' 'Ilios,' etc.

Published Simultaneously in England, France, Germany, and America.

The Preface by Professor F. Adler, and contributions by Dr. William Dörpfeld. With 188 woodcuts, 24 plates in chromo-lithography, 1 map, and 4 plans.

1 vol., royal octavo, $10 00.

"*Tiryns is the best, most interesting, and most important of Dr. Schliemann's works.*"—*Hon. Eugene Schuyler.*

"*The great debt which modern scholarship owes to Dr. Schliemann for his discoveries is still further increased by this new book. . . . The results of the excavations at Tiryns will be especially valuable for the light they throw upon the architecture of the prehistoric time.*"—*Boston Transcript.*

"We are not able to say too much in praise of the book or to commend it too cordially to our readers."—*Brooklyn Union.*

Messrs. Scribner have always ready for inspection in their retail department the richest and most complete stock of books issued by all English and American publishers in every branch of literature.

THE ANDOVER REVIEW.

On the whole the Andover Review is demonstrating its *raison d'être*, and deserves to be, as it is, the most popular religious review in America to-day.—*The Religious Herald* (Cong.).

The Andover Review well sustains the reputation generally accorded to it amongst our neighbors; the most valuable theological magazine published on this continent. —*The Week* (Toronto, Canada).

The Andover Review, an American religious and theological monthly which deserves attention and welcome on this side the Atlantic.—*The Christian World* (London).

THE ANDOVER REVIEW
FOR 1886.

The success which has attended the publication of the ANDOVER REVIEW for the past two years has led to its establishment upon a permanent financial basis. Commencing the year 1886 with increased resources, the REVIEW will be enlarged with each monthly issue to 112 pages, making an aggregate for the year of 1,344 pages, and the annual price of subscription will be $4.00; single copies, 35 cents. *Until January 1 subscriptions will be received at the present rate*, $3.00.

The ANDOVER REVIEW is a Religious and Theological Monthly, advocating the principles and methods of what is now known as Progressive Orthodoxy, but its discussions are not confined to the field of Theology. It is already recognized "as a strong expounder of the social questions of the day, promising a future of great influence." In future, articles upon Sociology will be supplemented by a department of Sociological Notes under the charge of the Rev. S. W. DIKE.

A Geographical and Missionary Department will also be added, under the care of Rev. C. C. STARBUCK.

Educational discussions will be continued, notably that introduced by Professor Palmer, of Harvard, in the November number.

The Moral Aspects of Literary Topics will be considered in special papers.

A series of articles upon Church Architecture, by Professor Churchill, will begin in an early number.

The Editorial and other departments will be conducted as heretofore, with increased attention to Book Reviews.

N. B. After Jan. 1, 1886, *the price of the Review will be* $4.00. *Until that date subscriptions will be received at the present rate*, $3.00, *from old and new subscribers.*

HOUGHTON, MIFFLIN & CO.,
BOSTON.
11 E. 17th St., New York.

No more luxurious book has ever been issued from the press than the superb edition of De Amicis' 'Spain and the Spaniards,' just published by the Messrs. Putnam. This edition has been limited to six hundred copies, the large part of which is already subscribed for. A competent critic says of this volume: "This indeed is an example of the best style of holiday publication—a book of popular and sufficiently substantial character, adorned with illustrations which add materially to the value of the text, and displaying in all its embellishment, whether of type, press-work, paper, binding, or proportions, a fine sense of what is appropriate as well as a liberal outlay." Price $15, $25, and $40. G. P. PUTNAM'S SONS, Publishers, New York.

Cushing's Manual of Parliamentary Practice.

Rules of proceeding and debate in deliberative assemblies. Price 75 cents. For sale at all book stores. Sent by mail on receipt of price. Address
THOMPSON, BROWN & CO.,
Boston, Mass.

No more attractive and well-selected volume of essays is published than 'Representative Essays,' from Irving, Lamb, DeQuincey, Carlyle, Emerson, Arnold, Morley, Lowell, Macaulay, etc., etc., just issued by Messrs. Putnam. Each essay is thoroughly characteristic of its author and is on some topic of wide interest. Price $2. Published by G. P. PUTNAM'S SONS, Publishers, New York.

FOURTH EDITION NOW READY:

THE RISE OF SILAS LAPHAM.

W. D. HOWELLS's new novel. $1.50.

"What Dickens was to London, Howells is to Boston." —*Boston Herald.*

"The best novel he has yet written. . . . A very remarkable story."—*Saturday Review.*

"'The Rise of Silas Lapham' is said to have invited more discussion during its publication than any serial since 'Daniel Deronda.'"—*Publishers' Weekly.*

"It is delicious."—*Every Other Saturday.*

"The dust of his writings is fine gold. Delightful in its perfection."—*Philadelphia Record.*

"The high-water mark of Mr. Howells's great and unique photographic genius. A marvellously minute and realistic picture of life in Boston—a miniature of high artistic value, delicately faithful."—*Pall Mall Gazette.*

"Irene Lapham is delicious."—*London Athenæum.*

"A work of genius—a great and perfect work of its kind."—*N. Y. Star.*

LOVE—Or a Name.

By JULIAN HAWTHORNE. 1 volume, 12mo, $1.50.

"Mr. Hawthorne's style is remarkably lucid, frank, bright, and vigorous."—*New York Telegram.*

"The book is intense, and as fascinating in its way as some of Hawthorne's more ideal fictions."—*Buffalo Courier.*

AULNAY TOWER.

A Charming Novel by BLANCHE WILLIS HOWARD. 12mo, $1.50.

"A delightful book, with all the gracefulness of 'One Summer,' and much of the strength of 'Guenn.'"—*Unity, Chicago.*

TUSCAN CITIES.

By W. D. HOWELLS. With many illustrations. Richly bound, with gilt edges. In a box. In cloth, $5.00; in antique morocco or tree calf, $10.00.

Florence and its famous churches and palaces. Siena, Pisa, Lucca, Pistoja, and other rare old cities of Tuscany.

"Vivid with the light and life of Northern Italy."—*Boston Advertiser.*

"All his wonted charm—graceful and finished in style." —*Hartford Courant.*

DAVY AND THE GOBLIN.

A Juvenile. By CHARLES E. CARRYL. 8vo, $1.50.

The Believing Voyage, the Sugar Plum Garden, the Butterscotchmen, the Moving Forest, Jack and the Beanstalk's Farm, the Giant Badorful, Sinbad the Sailor's House, etc. These fascinating chapters are illustrated with quaint illustrations.

"It appeals to children of any age from six to sixty."—*Quebec Chronicle.*

"A most enchanting story."—*Traveller.*

FOR A WOMAN.

By NORA PERRY. 16mo, $1.00.

"I have just read it at a single sitting, for I could not leave it. It is a success, and I am sure the reading public will so regard it. It is piquant as well as pathetic, and what is best of all, wholesome."—*John G. Whittier.*

"The Nutshell Series" comprises six tiny little volumes, exquisitely printed, in which are presented a selection of the best thoughts of the best writers, grouped under the following heads: *Wisdom, Philosophy, Epigrams, Proverbs, Sentiments*, and *Wit*. This set is beautifully put up and makes a most attractive present. Price, $3, $10, and $12. G. P. PUTNAM'S SONS, Publishers, New York.

New Books and Recent Publications of

T.Y.CROWELL&CO.,

13 Astor Place, New York.

Tennyson's Complete Poems.

Illustrated edition, with portrait, and 24 full-page illustrations by celebrated artists. Engraved by George T. Andrew. Uniform in size and style with Cambridge Book of Poetry. Royal 8vo, cloth, gilt, $5 00; morocco, gilt, $10 00; tree calf, $12 00.

It is well known that up to the present time there has been no *really first-class illustrated* edition of Tennyson published in this country. It is hoped and believed by the publishers that this attempt to produce such an edition will meet with a generous recognition and response from those who desire to possess a work of enduring value, illustrated by the best artists, printed on fine paper, and bound in a neat and attractive style befitting the works of this great author.

Red-Line Poets—Persian Leopard Edition.

20 vols., $3 00 per vol. In new and elegant leather bindings, round corners, padded covers, each volume in a box. The neatest and most attractive line of poets in leather bindings ever put on the market at so low a price.

Bryant, Favorite Poems, Lady of the Lake, Meredith, Scott, Burns, Goldsmith, Lucile, Milton, Shakespeare, Mrs. Browning, Hemans, Longfellow, Procter, Tennyson, Byron, Ingelow, Moore, Red-Letter Poems, Whittier.

Initials and Pseudonyms---A Dictionary of Literary Disguises.

Edited by William Cushing. 8vo, cloth, $5 00; half morocco, $7 50.

An indispensable volume for Public Libraries, Booksellers, and Literary Workers.

Her Majesty's Tower.

By W. Hepworth Dixon. A History of the Tower of London. 2 vols, 12mo, 47 illustrations, $3 50.

Princes, Authors, and Statesmen of our Time.

By James T. Fields, E. P. Whipple, Canon Farrar, Louise Chandler Moulton, and others. Edited by James Parton. With 60 illustrations. 8vo. $2 75. 4th thousand in press.

This valuable work is composed mainly of biographical and descriptive sketches of distinguished persons in this country and Europe, written by some of the most brilliant writers of the present time. They have been carefully edited by Mr. James Parton, and will be found not only of interest, but of permanent value.

Lives of Poor Boys who Became Famous.

(SECOND THOUSAND NOW READY.)

By Sarah K. Bolton. 12mo, $1 50. With numerous portraits.

Short biographical sketches of George Peabody, Horace Greeley, William Lloyd Garrison, Michael Faraday, Admiral Farragut, and other Noted People, who have achieved success in life, and left behind a record worthy of imitation by the young of the present generation.

Abbott's American History.

New edition. 4 vols. $6.00 per set.

This series has formerly been published in 8 vols., at $10.00 per set. We desire to increase their circulation, and have therefore prepared an edition in 4 vols., with all the cuts and illustrations, at $6.00 per set. They are well known to the trade, and their steady sale each year is a sufficient proof of their appreciation by the public.

Birchwood.

By Jak. 12mo, $1.25.

The initial volume of a new series by a writer of great promise, who has produced a work of unusual interest and value to young people.

Also, by the same author, *THE FITCH CLUB*, 12mo, $1.25, to be followed by *THE RIVERSIDE MUSEUM*

The Library Catalogue and Index is handsomely bound and lettered in one volume, quarto (6¾x8½ inches), made of the best paper, and will be mailed, post-paid, to any address on receipt of $2.50 by the publishers,

SHEPARD & JOHNSTON. 146 Monroe St., Chicago, Ill.

BAKER & TAYLOR,

Publishers and Booksellers,

No. 9 Bond Street, New York,

announce as now ready, a *new issue* of

THE WAVERLY NOVELS.

By SIR WALTER SCOTT, *Centenary* edition, in 25 volumes, illustrated with 158 steel plates. Sold only in sets. 12mo, cloth, extra gilt top, $31.25: half calf, extra, $68.75; half morocco, $68.75.

This is intended for, and believed to be generally acknowledged as, the best Library Edition of Scott's novels in the market.

BUNYAN'S PILGRIM S PROGRESS.

From this world to that which is to come. By JOHN BUNYAN. Being a *fac-simile* reprint of the first edition, published in 1678. 16mo, paper, 50 cents; antique binding, with renaissance design, gilt top, $1.25.

HERBERT'S TEMPLE.

Sacred Poems and Private Ejaculations. By GEORGE HERBERT, late Oratour of the Universitie of Cambridge Being a *fac-simile* of one of the *gift copies* printed for circulation by Nicholas Ferrar, before the publication in 1633, of which only one copy is known to exist. 16mo, paper, 50 cents; antique binding, with renaissance design, gilt top, $1.25.

WALTON'S COMPLETE ANGLER;

or, The Contemplative Man's Recreation. Being a *fac-simile* reprint of the first edition, published in 1653. 16mo, paper, 50 cents; antique binding, with renaissance design, gilt top, $1.25.

"These immortal works are here presented as nearly as possible in the precise form in which they were first issued. The paper is a close imitation of that manufactured two centuries ago, and the edges are, of course, uncut. This series of reprints is a most interesting one, and considering the low price, will doubtless attain a large circulation."—*The Literary World, London, England.*

"Two little books sure to be sought after are the *fac-similes* of George Herbert's 'Temple,' and of Walton's 'Complete Angler.' The quaint embossed binding in brown and white patterns at once distinguishes these books as unique. In both cases the result is very successful."—*New York Evening Post.*

"The printing and binding are so skillfully done in imitation of the antique as to deceive even the elect."—*Christian Union.*

"They are curious and valuable souvenirs of the authors and their works."—*New York Observer.*

"The *fac-simile* reprints are charmingly printed and bound in a fashion quaint and engaging. They are as pleasant little gifts for a friend as one could select."—*New York Tribune.*

The foregoing books are sold by Booksellers generally, or will be mailed on receipt of price by the Publishers.

Baker & Taylor, 9 Bond St., N. Y.

Houghton, Mifflin & Co.'s
NEW BOOKS.

A MORTAL ANTIPATHY. The First Opening of the New Portfolio. By OLIVER WENDELL HOLMES. 12mo, gilt top, $1.50.

A very engaging book, including a thoroughly interesting story, with chapters of personal reminiscences, full of wise and curious thought, brilliant in fancy and in wit—a delightful book, which only the author of 'Elsie Venner' and 'The Autocrat of the Breakfast-Table' could write.

BONNYBOROUGH. A New Story,

by Mrs. A. D. T. WHITNEY, author of 'Faith Gartney's Girlhood,' 'The Gayworthys,' etc. $1.50.

A New England story in scene and characters, marked by that peculiar earnestness, rare nobility of spirit, and interest which belong to all the stories that Mrs. Whitney has ever written.

*STUART'S LIFE AND CAM-*paigns. The Life and Campaigns of Major-General J. E. B. Stuart, Commander of the Cavalry of the Army of Northern Virginia. By H. B. MCCLELLAN, A.M., late Major, Assistant Adjutant-General and Chief of Staff of the Cavalry Corps, Army of Northern Virginia. With a fine Portrait of General Stuart and several admirable Maps. 1 vol. 8vo, $3.00.

General Stuart was one of the most conspicuous and most formidable cavalry officers on the Confederate side in the War for the Union, and the history of his campaigns is therefore of peculiar value and interest. Major McClellan, who served on his staff and was thoroughly acquainted with his military career, has told this story with excellent skill and good judgment.

251 BROADWAY, NEW YORK.

The Christmas Cards displayed in Messrs. PUTNAM'S Retail Department are more varied and attractive than ever before shown. Many dainty hand-painted cards, made exclusively for Messrs. Putnam, will be found in this stock, while the large space devoted to the proper arrangement and display of these cards enables purchasers to make their selections conveniently. It is suggested that it is advisable to examine this attractive stock before the rush of December.

27 and 29 West 23d Street.

THE MANHATTAN
Life Insurance Company.
156 and 158 BROADWAY,
NEW YORK.

"*I MUST DIE TO WIN.*"

This is a common expression, one used perhaps most frequently as an objection to the ordinary life plan. "It is an excellent form of provision for the family, but I must die to win."

YOU MAY LIVE AND WIN.

This refers to the Endowment plan, which meets the above objection. Take, for instance, a policy payable to yourself 10, 15, or 20 years hence. Say you die before the termination of the period; *your family wins.* You survive the period: the policy becomes at once a provision for your own advancing years. *You have lived and won.*

The "MANHATTAN'S" New Plan meets the case.

For example of its operation address the Company, giving your age.

Teachers.

A GRADUATE OF ONE OF THE first schools of the country, who has been studying in Europe for the 3½ years just past, and there received diplomas as graduate in the German, French, and Spanish languages, desires a position as professor of the same in some reputable college or university. References exchanged. Address, P. O. Box 280, Ashland, Hanover County, Virginia.

A LADY GRADUATE OF A MASSAchusetts Normal School desires a position as teacher in an academy or as a governess. Good references. Address Box 185, Quincy, Mass.

A YOUNG LADY DESIRES A SITUation to teach young children and to assist in household duties—or to be companion and helper to a lady. Address L. G. W., care of the *Nation.*

CHARLES W. STONE, *Tutor for Harvard,* 68 Chestnut Street, Boston.

Wants.

ENGAGEMENT WANTED BY LADY Stenographer and Typewriter. Competent, accurate; invaluable assistant to literary lady or gentleman; can read proof, revise manuscript; excellent critical faculty. Address EXPERIENCE, *Nation.*

IMPORTANT NEW BOOKS

JUST READY AND PUBLISHED BY

A. C. Armstrong & Son.

I. LIVES OF ROBERT AND MARY Moffat. By their Son, J. S. Moffat, an introduction by Rev. Wm. M. Taylor, D.D. With steel portraits, colored maps, and other illustrations. Octavo, cloth, gilt top, 520 pages, $2.50.

British Quarterly Review: "Here will be found the impress of a manhood of the very highest cast stamped on every page. Here will be met courage the most unfaltering and faith the most constant. A grand simplicity and heroic unconsciousness reign from first to last."

London News says: "The records of 19th century heroism and philanthropy have few more striking chapters than will be found in this memoir. It forms a very valuable and interesting record of a busy, earnest, and truly heroic life."

II. PRINCIPAL EDWARDS'S COMMENTARY on First Corinthians. By Thomas Charles Edwards, of Lincoln College, Oxford, and Principal of the University College of Wales. Octavo, cloth, 530 pages, $2.50.

London Literary World: "It is concise, clear, and scholarly; above all, it is eminently suggestive and readable. It is an admirable commentary."

London Expositor says: "It is learned, earnest, and philosophical, and will speedily take its place as the indispensable aid to the understanding of this part of the Bible."

A NEW VOLUME OF THE CLERICAL LIBRARY.

III. EXPOSITORY SERMONS ON THE Old Testament. By Archdeacon Farrar, Canons Liddon and Little, Rev. Drs. Joseph Parker, Maclaren, and other eminent clergymen. Crown octavo, cloth, $1.50.

The SIXTH Volume of this Valuable Series, "THE CLERICAL LIBRARY," which has met with much success both in Great Britain and this country.

WORKS OF THOMAS GRAY IN PROSE and Verse. Edited by Edmund Gosse, Lecturer of English Literature at the University of Cambridge. With portraits, fac-similes, etc. 4 vols. crown 8vo, cloth, gilt top, $6.00.

"Every lover of English literature will welcome the works of Gray from the hands of an editor so accomplished as Mr. Gosse. His competency for the task has been known for some time to students of poetry. This edition is at once careful and complete."—London Athenæum.

CHARLES LAMB—COMPLETE WORKS. With Life, etc., by Sir Thomas N. Talfourd. Corrected and Revised edition, with steel portrait. The most elegant edition published. Five vols. crown 8vo, extra cloth, gilt top, $7.50.

*EDGAR A. POE.—A NEW AND COMP*lete (illustrated) Edition. With Memoir and an Introduction on "The Genius of Poe," by R. H. Stoddard. With a new portrait on steel (the latest taken from life), etchings from original designs, fac-similes, numerous autographs, etc. Printed from new plates. 6 vols. crown 8vo, cloth, gilt top, $9.00.

JOHN KNOX. By Rev. Wm. M. Taylor, D.D. With a new steel portrait from a painting in the possession of Lord Somerville. 12mo. cloth, gilt top, $1.25.

London Lit. World says: "Dr. Taylor has succeeded in giving a complete and vivid account of the great Scotch reformer. The chief part of the book is naturally taken up with his work in his own country; a part is devoted to the deeply interesting relations between Queen Mary and her uncourtly subject," etc., etc.

TALKS WITH YOUNG MEN. By J. Thain Davidson. Bound in illuminated cloth. 12mo, vol., $1.25.

"Direct, practical, and pungent talks, such as young men like to hear. They are crowded with points of counsel and direction; will be invaluable to any young man, and all plainly and forcibly told, and fully illustrated."—Spurgeon.

WHAT IS SAID BY OUR

Highest Literary Authorities

Concerning George H. Picard's New Novel.

A MISSION FLOWER

"Choice literary work, a refined and delicate atmosphere, gentle irony, dainty humor, and careful study of character. All this and more. This new story has fresh elements; is placed in a section of the country not yet made over-familiar to us by writers; is planned and carried out with exquisite skill; deals with the deepest emotions of human hearts; is tender, is tragic, and has the power of holding the reader's interest in a tense strain."—THE LITERARY WORLD.

"Bears the stamp of novelty and develops into an extremely dramatic and picturesque story, formed from a series of clear, delicious little pictures that are something quite original in the fiction of the day. The conversations are simply delightful. In a word, the book is interesting."—THE CRITIC.

"Marks, let us hope, a new era in novel-writing. . . . Will be a positive and welcome surprise to the literary and reading world."—CHRISTIAN AT WORK.

"It is as easy to find lapses in the prose-writing of Oliver Goldsmith. . . . Its clear-cut lucidity reminds me of Balzac."—UNSOLICITED OPINION FROM A WELL-KNOWN WRITER (whose name the publishers do not feel at liberty to use).

Beautifully printed and bound.....$1 00

"If the reader once catches sight of the attractive exterior of the book, he will be likely to explore its contents."—THE DIAL, Chicago.

THE CHRISTIAN UNION says: "CLARA ERSKINE CLEMENT has supplemented her well-known and admirable 'History of Painting' by a new volume, published in the same style, and containing AN OUTLINE HISTORY OF

Sculpture

For BEGINNERS and STUDENTS."

Of this work THE BOSTON ADVERTISER *says:* "The author has given to her text almost the fascination of a well-told story."

THE BOSTON BEACON says: "May be heartily recommended as thoroughly sound, accurate, and helpful."

Fully and handsomely illustrated with 122 full-page illustrations or cuts set in the text. With complete indexes.

8vo. Tastefully bound. With artistic design stamped in gold on cloth cover, $2 50.

Covers the ground in an interesting way, giving a good idea of all the great sculptors and their works, as well as enabling any one who wishes a general knowledge of the subject to obtain it in a pleasant way. Very readable.

Notable Books for Children:

Rosebuds.

One of the most charming color-books for children ever published. Sixty-four pages of designs of little ones in many colors and mono-tints, by VIRGINIA GERSON. Beautifully printed in the highest grade of color-work. Bound in double covers with design of rosebuds and little children. 4to, boards, varnished covers, cloth back, $2.

"The most attractive volume for very little ones we have seen this year."—THE CHRISTIAN UNION.

"One of the loveliest of decorative gift books for little people."—BOSTON TRAVELLER.

Little Blossoms,

Merry Little People, Tiny Men and Maidens.

Each one of these three books contains a part of ROSEBUDS, and each one of the three has its own separate and distinct cover of most delicate and beautiful coloring. Boards, varnished covers, cloth backs, each book $1 00.

"A WONDERFULLY FUNNY CHILDREN'S BOOK," is what the *New York Times* says of

Slate and Pencil People.

By F. OPPER (of PUCK) and EMMA OPPER.

"An infinite fund of amusement for the little people in this dainty book."—*Boston Traveller.*

Large second edition now ready.

The illustrations are amusing, and are engraved so that their lines appear in white upon a black ground, in "slate and pencil" style. With bright colored cover designed by F. OPPER. Large flat 4to, boards, $1 00.

For full descriptions of many interesting new miscellaneous and holiday books (including the famous FLOWERSONGS SERIES *in remarkable new styles), send for White, Stokes & Allen's new catalogue. Mailed free to any address if this paper is mentioned.*

Any of the above books can be had of your bookseller, or will be sent to any address at publishers' expense, on receipt of advertised price.

Public Library

To the person receiving this as a Specimen Copy:

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on leading questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign, together with a Summary of the Week's News in six columns of brief paragraphs.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Your subscription is invited. To new readers who desire a better acquaintance with the paper than can be had from examination of a single copy, the *Nation* will be sent for two months at half rate—25 cents. (See blank on page ix.)

Terms, $3 per annum, postpaid. Address

THE NATION, 210 Broadway, New York.

Recent Press Comments on "The Nation."

"With the publication of No. 1043, our New York contemporary, the *Nation*, completes the twentieth year of its existence. Many changes have occurred since the *Nation* first appeared as an independent political and literary journal, not the least important being the improvement effected by its precept and example in political and literary criticism across the Atlantic. We trust that many years of life and usefulness are still in store for our esteemed contemporary."—*London Athenæum.*

"We have often had occasion to differ widely with the *Nation*; but its intelligence, its courage, and the great service it has rendered to purity and independence in public life, have always received our heartiest recognition. The *Nation* has appealed especially to thinkers and students, and although its constituency of readers has been comparatively small, its influence has been out of all proportion to its circulation. Its success has been almost contemporaneous with the rise of a new school of thinkers on public questions in this country."—*Christian Union.*

"The New York *Nation* has just completed its twentieth year of usefulness, and righteously rejoices thereat. It has won a place for itself by its great ability; however much we may differ from it in politics, we must accord it the palm for a fine presentation of its case. As a critical authority in matters of art and literature, it is unapproached and unapproachable. No journal exists that is its superior—few, indeed, are they that equal it—in these departments or in the world-wide correspondence it publishes upon all matters of interest to the best thinkers."—*Hartford Evening Post.*

"It is not too much to say of the *Nation* that no single agency has done so much to advance and dignify the calling of journalism in America. Including in its scope politics as well as literature and art, it has often aroused bitter political antagonism and suffered from partisan excitement and prejudice; but we believe no one—at least, no one whose judgments are valued by thinking men—has ever soberly questioned its sincerity and disinterestedness, or the remarkable force and candor with which its views have been presented. In literary criticism its methods and achievements have been such that this has almost become a new art under its leadership. In all departments the *Nation* has been singularly able and impartial, and its success is a cause of gratification, in which American scholars generally will share."—*Chicago Dial.*

"In celebrating its twentieth anniversary, the New York *Nation* takes a natural pride in showing how often it has been right when many of its readers thought it was wrong. Doubtless the readers of the *Nation* have always been the most intelligent and upright members of the Republican party—the pick and choice of the whole party of moral ideas. The depth to which that party had, as a mass, fallen in 1876 may then be guessed from the fact that the *Nation* says that in that year its opposition to the fraud by which Hayes was seated cost it three thousand of its subscribers. The *Nation's* subscription list was never large, and, as we have said, it was always made up of the very best class of Republicans, three thousand of whom dropped the paper because it exposed and opposed a known crime against the Republic. Truly this is a party of moral ideas."—*Knickerbocker Rough Notes.*

"The *Nation* announces in its number of June 25 that it has completed the twentieth year of its existence, and it indulges itself in a two-page retrospect of its very useful work. Started just at the close of the war, it aimed to discuss political and social questions in more moderate fashion and with fairer spirit than was then common to the daily press. It was very frequently in advance of the Republican party in this course, and lost scores and hundreds of subscribers at times by its independent course, particularly in 1876, when it denounced the methods by which Mr. Hayes was declared President. The *Nation* has fairly fulfilled its promise, however, to be independent of party, and is respected accordingly by thinking people. Its art and literary criticisms have always been of a high order, and have helped to give it a national reputation as a weekly paper of the first class."—*Philadelphia Public Ledger.*

"The *Herald* welcomes the *Nation* to its table, as one of the ablest and most fearless exponents of the leading economic and political questions of the time. The splendid success of this journal, now starting upon its forty-first volume, is the clearest evidence that absolutely independent journalism has a large and steadily growing field in this country. And while the *Nation* has often been opposed and bitterly criticised on the alleged ground that its positions were the independence of a dictatorial spirit, it has yet more frequently had the satisfaction of seeing its short-sighted critics ultimately wheel into line with its advanced ideas on some of the most important questions that have arisen during its career. The astonishing progress which has recently been made in the way of viewing political questions is largely due to the *Nation's* influence; and its projectors are entitled to the credit of having, through its columns, done something to hasten the coming of the better time, the reign of sweeter manners and purer laws."—*Council Bluffs Daily Herald.*

"During seventeen of the twenty years of the *Nation's* publication we have been among its constant readers, and have found it unequalled among American periodicals for pungency of style, candor and accuracy of statement, and force and originality in the discussion of political events and social conditions. In the course of its long history the *Nation* has often taken the unpopular side in the treatment of current topics, but it has been its happy fortune to see its opinions in most cases confirmed by the sober second thought of the people. It was the first Northern journal of Republican leanings that denounced the carpet-bag governments which, supported by Federal bayonets, so long preyed upon the industries of the South, and inflamed and protracted the disunion sentiments of its people. It had the courage, amid much obloquy, to question the impeachment of Andrew Johnson, and it was ten years in advance of popular opinion in unmasking that scheming demagogue Benjamin F. Butler. . . . Justly regarding James G. Blaine as a corrupter of political morality, as a schemer, and as a charlatan, it refused to give him its support in the late Presidential contest, and it has since found abundant reason for approving, in the main, the practical wisdom and honest purposes of the present Administration. In commending to our readers this able and independent journal, we feel that we are doing a service to the cause of public intelligence and morality."—*Portland (Oregon) Daily Standard.*

"Twenty years old" on July 1, and the *Nation* hugs itself with rightful self-respect as it announces the fact and reviews its past. We count ourselves happy in owning a nearly perfect set of the *Nation*—happy because from the close of the war till now it makes the best continuous record of contemporaneous history which our country has produced. One of *the* works on a young man's bookshelves should be the carefully-kept volumes of the best weekly newspaper he can afford. The growing series is his current cyclopædia, his public diary—*his* because it chronicles the yesterdays in which he lives. And heartily we name the *Nation* as, on the whole, our roundest, ablest, most trustworthy newspaper diary of the world's life and the nation's life and the world's and the nation's literature. It has been a great teacher; never popular, but very influential as a paper for editors, and lawyers, and politicians. Probably many a bright journal through the country has regularly watched the *Nation* as a compass. A strong, bold defender of the policies that have made for noble peace these twenty reshaping years, it has had the faults of its good qualities; comically omniscient almost always; holding its head high; seldom gracing itself with a confession of mistake; sometimes savage in its stamp on a poor sinner of a book; not heartless, but certainly polar in its manner; afraid of sentiment, and forgetful that cynicism is sentimentalism of rather a young man's, or an old man's, sort—it does not belong to the strongest years. But spite of all this, our clear-headed, outspoken, little-fearing, best newspaper. Twenty years of thanks to it, and twenty more of hopes."—*Chicago Unity.*

The Nation.

A WEEKLY JOURNAL DEVOTED TO

Politics, Literature, Science, and Art.

FOUNDED 1865.

CONTENTS OF THIS NUMBER.

THE WEEK 455

SUMMARY OF THE WEEK'S NEWS 458

*** Copies of THE NATION may be procured in Paris of J. G. Fotheringham, 8 Rue des Capucines; and in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; H. F. Gillig & Co., 449 Strand; and American News Reading Room, 8 Haymarket.

Schools.

Alphabetized, first, by States: second, by Towns.

CALIFORNIA (Southern) San Diego.

CIVIL AND MILITARY COLLEGE.—Full Collegiate Course for both sexes: Commercial, Scientific, Classical, and Military. Finest climate in the world; no heated terms; no cold spells.
General STUART STANLEY, Principal.

CONNECTICUT, Lyme.

BLACK HALL SCHOOL.—A FAMILY and Preparatory School for a few boys. Thorough instruction and careful training. New and enlarged accommodations. CHARLES G. BARTLETT, Principal.

CONNECTICUT, Middletown.

WILSON GRAMMAR SCHOOL GIVES a superior preparation for College. The Principal has served a term of three years as tutor in Yale College. Send for circular. E. H. WILSON.

DISTRICT OF COLUMBIA, Washington, 1916 35th St.

"THE CEDARS," GEORGETOWN Heights.—A Home and Day School for Young Ladies. Extensive grounds; superior scholastic advantages. Miss EARLE.

MARYLAND, Annapolis.

ANNAPOLIS FEMALE INSTITUTE. —Boarding and Day School for Young Ladies and Little Girls. MRS. RICHARD WELSH, Principal.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School. Address the Dean, EDMUND H. BENNETT, LL.D.

MASSACHUSETTS, Boston, 129 West Chester Park.

E. R. HUMPHREYS, LL.D., TUTOR for Harvard, Oxford, Cambridge, and other Universities and Colleges, has now completed his plans and staff of teachers, so as to meet the *modern changes* of studies recently made at HARVARD and at the English Universities, and is now ready to receive into his family three well-brought-up *boys* on *inclusive* terms, as moderate as the very liberal arrangements made will allow. As to the success of his pupils at Harvard at the last Examination (October, 1885) and in former years, he refers, with permission, to President C. W. Eliot, LL.D. Other references are in the prospectus. *Pupils entering before Nov. 20 will have considerable advantages.* Young women or men requiring advanced instruction only, can obtain First-class board and rooms a few doors off. For prospectus, address E. R. HUMPHREYS, as above

MASSACHUSETTS, Boston.

MISS PUTNAM'S SCHOOL, No. 68 Marlborough Street.

MASSACHUSETTS, Boston.

INSTITUTE OF TECHNOLOGY. Courses in Civil, Mechanical, Mining, and Electrical Engineering, Chemistry, Architecture, etc. JAMES P. MUNROE Sec'y. FRANCIS A. WALKER, Pres.

MASSACHUSETTS, Boston, 18 Boylston Place.

PREPARATION FOR THE INSTI tute of Technology. ALBERT HALE.

MASSACHUSETTS, Cambridge, Larch St.

HOME FOR BOYS.—DR. ABBOT AD- mits not more than three boys into his family, to fit for college or scientific study. The only pupil he sent to be examined last June entered Harvard as Freshman, without "conditions," and with "credits" in 12 out of the 17 subjects of examination. Separate tuition and best of care in all respects. Charming location, with fine tennis-court. F. E. ABBOT, Ph.D. (Harv.).

MASSACHUSETTS, Cambridge, 13 Appian Way.

MR. JOSHUA KENDALL'S DAY AND Family School for Boys. Fits for college. Circulars.

MASSACHUSETTS, Lanesboro, Berkshire Co.

ELMWOOD INSTITUTE, ESTAB- lished in 1849, fits for college or business. Rev. A. A. GILBERT A.M., Prin.

MASSACHUSETTS, Plymouth.

MR. KNAPP'S HOME SCHOOL FOR Boys.—Fall term (nineteenth year) begins September 24th, 1885.

MASSACHUSETTS, Quincy.

ADAMS ACADEMY.—PREPARA- tory and boarding school for boys. New year begins 14th September, 1885. For Catalogue and other information address WILLIAM EVERETT, Ph D.

MASSACHUSETTS, S. Williamstown, Berkshire Co.

GREYLOCK INSTITUTE.—A PRE- paratory School for Boys. 44th year. Circulars on application. GEORGE F. MILLS, Principal.

MASSACHUSETTS, West Bridgewater.

HOWARD COLLEGIATE Institute,—Home and Day School for Girls and Young Women. Offers a full preparatory, with shorter college course, including all collegiate work essential to a thorough general education, or to advanced work in American or English Universities. Age, 12-20. Will open eighteen new single rooms in November. For catalogue address the Principal,
HELEN MAGILL, Ph.D.,
Graduate of Swarthmore College, Boston University, and Newnham College, Cambridge, England.

NEW JERSEY, Morristown.

ST. HILDA'S SCHOOL.—A BOARDING School for Girls. Under the charge of the Sisters of St. John Baptist. Sixth year begins September 28. For terms, etc., address THE SISTER IN CHARGE.

NEW JERSEY, New Brunswick, 13 Livingston Ave.

THE MISSES ANABLE'S ENGLISH, French, and German Boarding and Day School will reopen September 23.

NEW YORK, Canandaigua.

FORT HILL SCHOOL (for Boys).—Second year. Enlarged accommodations. $600.
Rev. JAMES HATTRICK LEE, Head Master.

NEW YORK CITY, 231 E. 17th St.

ST. JOHN BAPTIST SCHOOL FOR Girls.—The school is pleasantly situated on Stuyvesant Square, and is a new building planned to supply all that can be required for the comfort and well being of the pupils. French and English teachers. Professors for French, Science, etc. Address
SISTER IN CHARGE.

NEW YORK, Garden City, Long Island.

ST. MARY'S CATHEDRAL SCHOOL, having taken additional building can accommodate a few more pupils. Apply early to
Miss H. CARROLL BATES,
Principal.

NEW YORK, Suspension Bridge.

DE VEAUX COLLEGE.—A Military Boarding School for Boys. $350 per annum.
WILFRED H. MUNRO, A.M., President.

NEW YORK, Utica.

MRS. PIATT'S SCHOOL for YOUNG Ladies.—The next school year begins Thursday, Sept. 17, 1885. Applications should be made early.

PENNSYLVANIA, Germantown, 5128 Germantown Avenue, Phila.

FRANKLIN SCHOOL.—AN ENGLISH and Classical School for Boys. Six resident pupils. Prospectus sent on application.
GEORGE A. PERRY, A.M., Head-Master.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S SCHOOL for Young Ladies will reopen Sept. 23, 1885.

PENNSYLVANIA, Philadelphia, Norwood Avenue, Chestnut Hill.

MRS. WALTER D. COMEGYS and Miss Bell's English and French Boarding and Day School for Young Ladies will reopen Sept. 21.

PENNSYLVANIA, West Philadelphia, 3903 Locust St.

MR. MARTIN'S SCHOOL. SPECIAL class with afternoon care of play and lessons.

PENNSYLVANIA, WEST PHILADELPHIA.

UNIVERSITY OF PENNSYLVANIA.
I. DEPARTMENT OF ARTS, four-years' classical course. Degree A. B.
II. TOWNE SCIENTIFIC SCHOOL, five-year courses in (a) Chemistry, (b) Geology and Mining, (c) Civil Engineering, (d) Dynamical Engineering, (e) Architecture, leading to B. S., and to technical degrees, P. C. (Practical Chemist), M. E., C. E., E. M., Architect.
III. WHARTON SCHOOL OF FINANCE AND ECONOMY. Courses in Constitutional Law and Public Administration, Political Economy, Mercantile Law and Practice, Finance, Banking, Railroading. Degree Ph. B.
IV. COURSE IN PHILOSOPHY, four years. English, Latin, French, German, Mental and Moral Philosophy, Mathematics, General Science, extended instruction in Biology with laboratory work. Degree Ph. B.
Liberal elections in and between these courses at close of Second Year.
V. COURSE IN MUSIC. Two-years' graded course. Degree Mus. Bac.
VI. MEDICAL SCHOOL. Three-years' graded course with optional fourth year. Degree M. D.
VII. DENTAL SCHOOL. Two-years' graded course. Degree D. D. S.
VIII. VETERINARY SCHOOL. Three-years' graded course similar to European schools. Degree V. S.
Clinical and laboratory advantages a prominent feature in these three schools.
IX. LAW SCHOOL. Two-years' course; diploma admits to Pennsylvania Bar. Degree LL. B.
X. BIOLOGICAL SCHOOL. Two-years' course, with extended laboratory work. Certificate admits to Medical School without examination. Special courses.
XI. DEPARTMENT OF PHILOSOPHY. Two-years' post-graduate course in numerous subjects leading to degree Ph. D.
In making inquiry please specify department.
Rev. JESSE Y. BURK, Secretary,
University of Pennsylvania, West Philadelphia, Pa.

School Agencies.

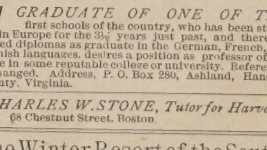
BROCKWAY TEACHERS' AGENCY, *Times* Building, Chicago, will supply superintendents, grade teachers, specialists with positions in Central, Western, and Southern States for ensuing year.

Teachers.

A GRADUATE OF ONE OF THE first schools of the country, who has been studying in Europe for the 3½ years just past, and there received diplomas as graduate in the German, French, and Spanish languages, desires a position as professor of the same in some reputable college or university. References exchanged. Address, P. O. Box 280, Ashland, Hanover County, Virginia.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut Street, Boston.

The Winter Resort of the South.



Send for descriptive pamphlet. H. PHOEBUS, Prop'r

New Books and Books for Holiday Presents

PUBLISHED BY

MACMILLAN & CO.

UNIFORM WITH "THE GRAPHIC ARTS."

LANDSCAPE.

By Philip Gilbert Hamerton, author of 'Etchings and Etchers,' 'The Graphic Arts,' etc., etc. Columbier 8vo, with about fifty illustrations. Price $35; large-paper copies, with proofs of the engravings, and bound in vellum, price, $70.

"The superb volume before us may be said to represent, so far as this country is concerned, illustration, decoration, typography, and taste in binding at their best, employed in a work devoted to the fine arts exclusively."—*Athenæum.*

"The illustrations of 'Landscape' are of a kind to which an especial and distinguishing praise must be given. In complete artistic quality no book illustration of the day equals them. They are, as the preface asserts, at the high-water mark of what can be done in this vein, and in consonance with the purpose of the book. . . . The get-up of 'Landscape' is superlative—the art of book-making in our day can go no further."—*Nation.*

Windsor.

By the Rev. W. J. Loftie. With Twelve Plates and numerous Vignettes. Imp. 4to, cloth, $7.50.

Isis and Thamesis.

Hours on the River, from Oxford to Henley. By Alfred J. Church, M.A. With 12 Plates and numerous Vignettes. Imp. 8vo, cloth, $6.

THE GREAT ENGLISH DICTIONARY OF BIOGRAPHY.

The Dictionary of National Biography.

Edited by Leslie Stephen. Vols. 1—4 now ready. The price of each volume is $3.25.

*** Further volumes will be issued at intervals of three months, and it is expected that the work will be completed in about Fifty Volumes.

"It is perfectly safe to predict, therefore, that this dictionary will find as ready acceptance here as in England. It is quite as necessary to an American as to an English library's completeness."—*N. Y. Commercial Advertiser.*

"It will stand almost in the same relation to our mutual wants as a dictionary of our common language."—*N. Y. Observer.*

"Of the general value of this work to Americans, we need hardly speak. In great part it is the history of our ancestors, and in the achievements of Englishmen in science, literature, art, and politics, we have the warmest and closest interest. No public library will think of omitting this work from its list, and the number of subscribers among those who know the value of a good private reference library will undoubtedly be large."—*Christian Union.*

A New Translation of Don Quixote, the Ingenious Gentleman.

Don Quixote.

By MIGUEL DE CERVANTES SAAVEDRA. A translation, with Introduction and Notes by John Ormsby, translator of the "Poem of the Cid." 4 vols., 8vo, $14.

"Mr. Ormsby has done his work well and has demonstrated beyond a doubt that he was a fit person to undertake the important task of translating anew the novel which many good judges have pronounced to be the best in the world."—*Boston Daily Advertiser.*

"Cervantes's Immortal Work. . . . It is decidedly more accurate than those which preceded it."—*Athenæum.*

"Enables the English reader to form some true idea of what Cervantes's great work really is. . . . Should certainly supersede all former versions of Don Quixote into English."—*Academy.*

BY MATTHEW ARNOLD.

Prose Works.

In Seven Volumes. 12mo, each $1.50.

Vol. 1. Essays in Criticism.
Vol. 2. On the Study of Celtic Literature—On Translating Homer.

Vol. 4. Mixed Essays—Irish Essays.
Vol. 5. Literature and Dogma
Vol. 6. God and the Bible.
Vol. 7. St. Paul and Protestantism—Last Essays on Church and Religion.

Poems.

Uniform with the above. Two volumes. 12mo, $3.50.

Vol. 1 Early Poems, Narrative Poems and Sonnets.
Vol. 2 Lyric, Dramatic, and Elegiac Poems.

The Poems and Prose, 9 vols., in paper box, $14.

American edition of the Poems, in 1 vol., 12mo, $1 50.

"It is to him and Clough that the men of the future will come who desire to find the clearest poetic expression of the sentiment and reflection of the most cultivated and thoughtful men of our generation."—*The Nation*

A New Illustrated Edition of 'The Water Babies.'

The Water Babies.

A Fairy Tale for a Land Baby. By CHARLES KINGSLEY. With 100 Illustrations by LINLEY SAMBOURNE. F'cap, 4to, cloth, gilt edges, $4.

LORD TENNYSON'S NEW BOOK.

Tiresias, and Other Poems.

By ALFRED LORD TENNYSON, Poet Laureate. F'cap, 8vo. [*In December.*]

LORD TENNYSON'S WORKS.

The Collected Works of Alfred Lord Tennyson.

A new edition, revised throughout by the author. In 7 volumes, globe 8vo, cloth. In paper box, $12.00. Each volume, $1.75.

A Special Edition of the same on hand-made paper, and in elegant binding. (*Sold in Sets only.*) Price, $24.50.

Vol. 1. Early Poems.
Vol. 2. Lucretius and other poems.
Vol. 3. Idylls of the King.
Vol. 4. The Princess; and Maud.
Vol. 5. Enoch Arden; and In Memoriam.
Vol. 6. Queen Mary; and Harold.
Vol. 7. Ballads and Other Poems.

"A neater, more convenient and more tasteful edition of the Laureate's Poems will probably never be printed."—*New York Tribune.*

"This edition fills every condition that an intelligent book collector could demand. The paper, the type, the ink being simply perfect, and perfect on account of their simplicity. No English edition hitherto published will compare with it, and certainly no American edition that we have ever seen."—*Independent.*

Browning Selection.

SELECTIONS FROM THE POETICAL WORKS OF ROBERT BROWNING. First and Second Series. Globe 8vo, each $1.25.

A SELECTION FROM THE POETRY OF ELIZABETH BARRETT BROWNING. First and Second Series. Globe 8vo, each $1.25.

A NEW VOLUME OF THE GOLDEN TREASURY SERIES.

In Memoriam.

By ALFRED LORD TENNYSON. 18mo, cloth, $1.25. Also, cheaper edition. 18mo, paper, 50 cents; cloth, 75 cents.

Christmas Double Number.

Price, 30 Cents. Annual Subscription, $1.75.

The English Illustrated Magazine.

No. 27.....DECEMBER.

Contents:

TWELVE FULL-PAGE ILLUSTRATIONS.

1. KISS AND BE FRIENDS. Author of 'John Halifax, Gentleman.' Illustrated.
2. SIR ROGER DE COVERLEY. From the Spectator. With Illustrations.
3. THE BODY BIRDS OF COURT. Stanley J. Weyman.
4. THROUGH THE CÔTES DU NORD. H. R. Robertson. With illustrations.
5. AUNT RACHEL. D. Christie Murray.

HEADINGS, INITIALS, ORNAMENTAL FRIEZES, &c.

The English Illustrated Magazine.

New Volume for 1885, consisting of 840 closely printed pages, and containing nearly 500 Illustrations of various sizes. Bound in cloth, colored edges. Price, $2.50.

"Really a charming magazine, and easily holds the front rank among English magazines."—*Churchman.*

"The magazine has achieved a pronounced success, and has become a feature in the current literature of the day."—*Sacramento Record-Union.*

NEW BOOKS FOR THE YOUNG:

A New Story by the Author of 'The Heir of Redclyffe.'

NUTTIE'S FATHER. By Charlotte M. Yonge, author of 'The Heir of Redclyffe,' &c., &c. 12mo, cloth, $1.50.

"Distinguished, as are all her works, for its high tone. It might be put into the hands of any child, and yet there is sufficient in it to interest children of a larger growth."—*Academy.*

A New Book by the Author of 'Carrots.'

"US": AN OLD-FASHIONED Story. By Mrs. Molesworth, author of 'Carrots,' 'Cuckoo Clock,' &c. With Illustrations by Walter Crane. 16mo, cloth, $1.25.

"We are glad to find that Mrs. Molesworth has returned to an English nursery, while she has contrived to introduce a new charm by calling back to life the days when Pamela was not an impossible name."—*Academy.*

A New Book by Alfred Russel Wallace.

BAD TIMES: AN ESSAY ON the present Depression of Trade, tracing it to its sources in enormous Foreign Loans, excessive War Expenditure, the increase of speculation and of Millionaires, and the Depopulation of the Rural Districts With Suggested Remedies. By Alfred Russel Wallace, LL.D. 12mo, 75 cents.

MACMILLAN & CO., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 3, 1885.

The Week.

In all the common relations of life the late Vice-President Hendricks was, we believe, without stain or reproach. This is very much to say for one whose life, for more than thirty years, had been exposed to the searching scrutiny of political rivals and political adversaries. He belonged to the class of public men whom it is safe to choose for places of trust and responsibility, when, for any reason, the choice of greater men and more positive characters is denied to the voter. Among the Democrats he was the foremost of second-rate men. He was not the equal of Tilden, Cleveland, Thurman, or Bayard, either in intellectual grasp or in moral courage. Yet he held a footing very near to them in the confidence of his party, through the general conviction that his aims were patriotic and conservative, his character honorable, and his abilities, though not brilliant or commanding, yet eminently respectable. He was no match for the late Senator Morton, his rival during many years for the political honors of Indiana, yet he held second place in their long and fierce contest, with the honor and esteem of his political adversaries. When Mr. Morton died, Mr. Hendricks became the principal figure in the politics of Indiana. Although he did not immediately succeed to the honors of office, he was recognized as the man best qualified to secure the vote of Indiana in any national contest. For this reason he was nominated for Vice-President with Governor Tilden, and again with Governor Cleveland, and in both instances vindicated the wisdom of the choice. A more arduous and doubtful contest was that of 1872, when he ran for Governor in the ill-fated Greeley campaign, but here, too, he was successful by a narrow majority. He was the only Democratic leader in the North who survived the catastrophe of that year. His success in that contest led the way to the higher honors that followed. If life and health had been spared to him, he would probably have been the choice of that division of the Democratic party which is discontented with President Cleveland's civil-service policy for the next Presidential nomination. His assiduity in getting places for his friends was unflagging and unconcealed. He belonged to the spoils-hunting wing of his party—the school of Jackson and Marcy—and he was quite willing to be known and advertised as such. His long experience in public life, his strong personal hold upon one of the "doubtful States," and his known dissent from the policy of President Cleveland regarding the distribution of the offices, all signalized him as the rallying-point of the disaffected Democrats. Hence his death makes a wider mark in the politics of the day than the death of a Vice-President ordinarily leaves.

The death of a Vice-President is not, however, even in the incomplete state of the law regarding the succession, an alarming matter. If the Republicans elect an acting Vice-President from their own number, as they doubtless will, and if President Cleveland should die in office, the law provides for a special election for President and Vice-President. The *locum tenens* of the Presidency can only hold his office little more than a year in any case, and it is not to be supposed that he would exercise the office in any other way than as a care-taker. Fortunately, President Cleveland is in sound health and in the prime of life.

A queer phase of the Logan campaign for the Presidency of the Senate is the fresh revelation which it makes of the ruling passion in the Blaine mind to "work" for every office which comes in sight. One would think that our highest deliberative body could be trusted to pick out its own presiding officer without outside help. The Senate has a Republican majority which is composed of men who represent fairly the highest wisdom of the party. These men ought to be able to decide this question in such a way as to be most honorable to themselves and most wise for the country. But the Blaine workers cannot take this view. They began within a few hours after the Vice-President's death to "boom" Logan for the place, and have hardly paused a moment since in their efforts to crowd him into it, whether the Senators think him the best man or not. They are attempting now to make him the caucus candidate, and force his nomination through in that way. It is noticeable that only a few of the Senators, among those whose views have been sought, are willing to commit themselves in advance as to their action when the Senate meets. They have evidently a much higher opinion of their own capacity for wise action than the Republican organs which are trying to pack their caucus for them.

The annual report of the Comptroller of the Currency repeats the suggestion made by Comptroller Knox last year, that a "safety fund" be accumulated in the Treasury in anticipation of the retirement, by redemption, of the bonds now held as security for national-bank notes. This fund, it is shown, might be collected without oppressing the banks or injuriously affecting any public interest, by applying to it the gains resulting from the loss or destruction of bank notes and the existing tax on circulation, together with the interest on the bank-note redemption fund, now amounting to $39,000,000. Until the scarcity of bonds becomes a serious impediment, this fund, it is shown, might be used as security in part for bank notes, dispensing with a certain percentage of the existing bond security. The suggestion is both valuable and timely. It is best to get ready for the inevitable coming change in the national banking system. The present bond security cannot last longer than the public debt itself. Something must be thought out to take its place, and it is the part of wisdom to take some tentative step before the pressure is seriously felt. Of course the question will eventually arise, In what kind of interest-bearing security shall the safety fund be invested when there are no longer any Government bonds to be had? But this question will be more easily answered if the safety fund actually exists than if it has to be both created and invested.

The political chapter in General Black's annual report as Commissioner of Pensions is open to criticism on the score of good taste, but the facts which he proclaims are unquestionably true. The Pension Office has been used for partisan ends in the most shameless way. From the Chief of the Bureau down to the Medical Examining Board almost every place has been filled with Republicans upon system. It would have been bad enough if the partisan character of this great governmental benevolence had been confined merely to the appointment of agents for disbursing its funds. But it did not stop there. The machinery of pension-paying was employed as a propaganda of Republican faith in a thousand ways, and the idea was sedulously cultivated and disseminated among pensioners that unless the Republican party were kept in power pensions would cease altogether. There is good reason to believe that the scandalous campaign work of Commissioner Dudley saved the State election in Ohio last year to the Republicans. While all or most of the charges made by General Black are probably susceptible of proof, we regret that he should have chosen the channel of his annual report for making them known. They are in some sense a blot upon the public records, which ought to be kept as free as possible from the traces of party strife.

The official count in Virginia puts an effectual quietus upon the claim that the Republicans were beaten by fraud. The total vote proves to have been nearly 4,000 greater than was cast in the Presidential election of 1884, which was by far the largest that had ever been known. In 1881, when Mahone swept the State and made Cameron Governor, his party polled 111,473 votes. In 1885 the Republican ticket received 136,129 ballots, the total vote amounting to 288,504 out of a population of 1,512,565 in 1880, which exceeds the highest proportion of votes to population ever reached in the State of Massachusetts. There have been intimations that Mahone would try to convince the country that he was cheated out of a victory, but we think that even he lacks impudence enough to claim that an election was unfair in which his party is credited with 25,000 more votes than it cast four years ago.

The election on the prohibition question in Fulton County, Ga., last week, brought out the heaviest vote ever known. The city of Atlanta "went wet" by a small majority, but the outlying towns gave the "dry" party a larger majority, so that the sale of liquor throughout the county was forbidden by the narrow margin of 216 votes in a total poll of 7,642. For President last fall Fulton County cast in all only 2,863 votes, or but little more than one-third as many as were polled on Wednesday, while the largest vote in any previous election—that for President in 1876—reached only 6,518, or more than 1,000 short of this week's. Many Northern comments upon

this extraordinary showing are based upon ignorance or misconception. The small vote last year was not due to intimidation of Republican voters and involved no unfairness. The reason for it was that the result of the election in 1884 was a foregone conclusion, and only a third of the voters cared enough about casting their ballots to go to the polls. Wherever there is a great laboring population, experience has shown that a large percentage will not pay even a dollar for the privilege of voting. The size of the total poll in a city like Boston is always regulated by the activity of rival partisans in paying by wholesale the poll taxes of indifferent voters. The Georgia law requires the payment of all the back taxes as a prerequisite to voting, so that if a man gets out of the habit of voting for a few years, he finds that he has $6 or $8 to pay before he can get his name on the list again. In last year's election nobody felt interested enough on the Republican side to spend money in paying these back taxes for the negroes, and, with the certainty of a small colored Republican vote, many white Democrats neglected to qualify themselves. This year, on the contrary, both "wet" and "dry" leaders were more than ready to settle the tax accounts of any negro whose vote they hoped to capture, and so the registration was unprecedentedly large. The color line was utterly broken down, and the white Prohibitionists frankly confess their indebtedness to the efforts of the negro clergy for their victory.

The December *Century* contains three interesting "Open Letters" on the question, "What Shall be Done with Our Ex-Presidents?" from Dr. Francis Wharton, Solicitor of the State Department; Judge Thomas M. Cooley, of Michigan; and Senator Edmunds. All three agree that the scheme of making ex-Presidents life members of the Senate is repugnant to the theory of our Government, and would work unfairness in the representation of the States in Congress. Mr. Edmunds sums up the case with admirable brevity and force when he says:

> "There are many considerations against disturbing the present autonomy of the Senate which I have not time to go into. There is nothing that I know of in the nature of republican government which makes it necessary that an ex-President should have any other station or title than that of an eminent private citizen, who has done his country important service in the most trying and difficult of all its public employments."

Mr. Edmunds regards the question whether suitable pecuniary provision for the maintenance of a retiring President might not well be made, as worthy of serious consideration, and Dr. Wharton makes a good argument for a pension, in such cases, of half the Presidential salary. There would probably be little popular opposition to such a system, but there is no question that the country will endorse Mr. Edmunds's opinion that the notion of giving every ex-President a life office is opposed to the very nature of our Government. The longest tenure known to us is tenure during good behavior.

The newspapers, during the past few days, have been full of interesting items of news relating to Messrs. Field and Sage's "trip to Boston." It seems that those gentlemen made a bid for some bonds of the New York and New England Railroad, which the State of Massachusetts offered for sale, that their bid was rejected, and a lower bid made by a Boston syndicate was accepted. On this Messrs. Field and Sage, who were directors in the road, hurried on to a meeting of the company at Boston, and at the same time filed an emphatic protest against the tyrannous and iniquitous behavior of the Governor and Council in rejecting their bid. Finding that no attention was likely to be paid to it, the two travellers returned home, Mr. Field so weary and disgusted with the outrage perpetrated upon him that he at once retired from the Board, and some one proceeded to sell stock so rapidly that in one day about 14,000 shares—a large proportion of the share capital of the road—was thrown on the market.

The Governor of Massachusetts has now explained his action in the matter in a document of great vigor, in which he reminds Mr. Field—and this is really the point upon which the whole dispute turns—that in the invitation for proposals this right to reject any and all bids was expressly reserved, in case the interests of the State should so require. The reasons why Messrs. Field and Sage's bid was rejected were these: first, because the State has an extensive interest in the road, which makes it necessary that the bonds should not pass into the hands of speculators who may act adversely to it; second, that on account of this circumstance it was deemed necessary to look behind the bids, at the bidders, and consider attentively what manner of men they were; third, that the bidders were Messrs. Field and Sage, two directors of the road who, according to "unquestionable testimony," had "openly advocated in the directors' meeting and elsewhere the purchase of the State's bonds for the purpose of compelling the unsecured creditors, by threat of foreclosure, to accept a low figure for their claims, and thereby enable them (Messrs. Field and Sage) to make money"; and fourthly, because these directors had criticised the present management of the road as being too successful, thereby diminishing the opportunities for "freezing out" the creditors. The Governor continues by saying that "the sentiment is still jealously maintained in Massachusetts that those who stand as trustees for any corporation or for the public shall in all matters so intrusted to them keep their hands free from the taint of private greed." Finally he says that rather than have accepted the bid of such persons, the State would not have sold the bonds at all. It should be remarked that Mr. Sage denies the impeachment so far as he is concerned.

The predicament in which General Shaler stands is one in which every corrupt official ought to reckon on finding himself caught first or last. We say this without prejudging his defence. He may show that the charge of bribery for which he has been arrested is false, and that what he did is "consistent with the highest integrity and honor." He is entitled to all the presumptions of innocence until he is proved guilty. But if he is guilty, it is pretty safe to say that this is not his first offence. Men in good position do not fall to taking bribes all at once. The descent to Avernus is easy because it is gradual. When a man has begun to slide he fancies that because the first lapses from virtue have been unnoticed all the later ones will remain concealed, whereas each one contains its special peril, and the dangers of discovery multiply at every step with mathematical precision. The percentage of chance waxes greater against him day by day. General Shaler has held good positions in the city of New York—in the Fire Department, the Health Department, and the State militia, and also in Wall Street, where he was once the President of a large mining company. He also served with distinction in the army. The whole community must share in the sense of humiliation when such a man is put under arrest for an infamous crime, and nearly everybody will be glad if he succeeds in repelling the charge brought against him. At present his case looks very dark.

The vigorous though somewhat late action of the Baptist ministers of Boston in expelling the Rev. Mr. Downs from their Conference will probably hasten somewhat his final retirement from the public gaze, though it is not likely to cause that desired event to occur immediately. Notoriety will keep him a-going for a few weeks longer, but sooner or later the inability to collect money enough to pay running expenses will put an end to his career. His brother ministers say frankly that he has brought disgrace upon his profession, and one of them remarked truly that no censure which they could pass upon him would be too severe. Their condemnation would have been of vastly greater service to the cause of religion if it had come several weeks ago. There has been from the outset of the case little doubt that Downs was a very cheap and a very audacious hypocrite. It is a mistaken idea of Christian charity to extend it to men of his sort even by keeping silent. The idea that a clergyman can be caught in positions of doubtful propriety and still be innocent of wrong, is one which every sincere member of the Church ought to put his foot upon with righteous indignation every time he encounters it.

The way in which religion resists the attacks of the religious press is something very remarkable. The following is from the *Independent:*

> "Mr. Stead's offence was, at worst, but a technical one; and the worst was made of that. He obtained a child without the consent of its 'father, mother, or guardian.' The law makes the father the custodian, when he is living, and the mother, if she be a widow. Mr. Stead's agent, Mrs. Jarrett, obtained the child from the mother, without doubt with her full consent, but with no formal consent from her father. Mrs. Jarrett declares that the mother sold her the girl for immoral purposes, and that the father knew it, and did not object. The evidence seems to us to corroborate this statement, though the mother, who had been several times arrested for drunkenness, and the father, a chimney-sweep, declare stoutly that the girl was engaged as a servant. But it is of no use to go into this part of the evidence. The witnesses on both sides are untrustworthy enough. It is clear that Mr. Stead believed that the facts were as represented to him; and so they very likely were. But, however the facts were, the father's consent was not obtained, and the Judge declares that the best intent makes no difference in law, nor the best treatment, which the girl had; and Mr. Stead was convicted and must suffer."

One seldom meets in a secular paper a more audacious perversion of the facts than the foregoing. The most charitable view one can

take of it is that the writer had not read the evidence at all. Who would suppose from it that "Mr. Stead's agent, Mrs. Jarrett," was an old prostitute who had shammed penitence because the times were bad, and whom there was no reason for trusting except her own word; that Stead sent her on the shameful errand of getting a mother to sell an innocent child; that Jarrett acknowledged in open court that she had lied to him about the whole matter and about her own life; that there was no evidence but hers that the child's mother had sold her; that when Stead "personally guaranteed" the facts in his paper, he had nothing to base the guarantee on but Jarrett's story; that the jury and the Judge did not believe one word she said about the sale of the child; that Stead described the case in his paper as a real case, when it was really bogus and manufactured by himself and this strumpet; that the "best treatment" which this religious editor says the child Ellen Armstrong had was delivery to a vile woman, to be carried to a house of ill-fame in the night, and there indecently examined by another vile woman, and then chloroformed and examined again, then carried abroad and concealed from her parents, and then, with her father and mother, made notorious over the civilized world, as long as she lives, as the heroine of the filthiest scandal on record? We should think a religious writer would ask himself, before writing such stuff, How should I like to have my daughter treated in this way, in order to furnish a philanthropist with materials for a sensational newspaper article? In fact, is not that the first question a Christian man should put to himself before undertaking to justify such a transaction, or whitewash it?

We wish much that some of the more thoughtful and intelligent Jeffersonian Democrats would reveal to the public what they suppose to be the cause of the extraordinary excitement and activity with which the English people are carrying on their general elections just now. One of the chief arguments of these worthies against our Civil-Service Act, and above all against the extension of the competitive system in the United States, is, as we all know, that in the absence of offices to distribute among the party workers, the interest of the American people in politics will rapidly die out, and it will finally become difficult to get people to vote, or to care who is elected to fill the higher offices, not to speak of taking the trouble to canvass either in private or public. Now in England, after a change of administration, there are only between thirty and forty offices at the disposal of the victorious party, and about sixteen of these are seats in the Cabinet. The others are also high positions, to which no ordinary worker can aspire. There are no foreign missions, and no consulates, no post-offices, collectorships, weigherships, or clerkships of any description, except in the Foreign Office, and members of Parliament get no pay. In spite of all this, however, there never was an electoral conflict carried on with greater heat than the present one. The constituencies have been fairly deluged with stump oratory, and the speakers have not been politicians only, but the foremost men in the country in every calling: clergymen, professors, scientific men have taken a hand in the work. Not even in the great days of the war have we witnessed in this country such a descent of speakers of all classes and conditions into the political arena, as the English have witnessed during the last few months.

What increases the mystery is that the law—and in England laws of this sort are enforced—imposes the sternest restrictions on the use of money at elections. Bribery of voters has in times past been very common there. But now an election petition is not tried in Parliament, but before the judges of the law courts, and the public prosecutor has to appear at the trial and see that it is prosecuted to the bitter end. Bribery, undue influence, and personation, and even treating, are punishable with fine and imprisonment and hard labor. To withdraw an election petition for a consideration of any kind is a misdemeanor. Even if the seat be not contested, any one may complain of bribery to the public prosecutor, and have the offenders prosecuted. A candidate found guilty of corruption by the judge can never sit again for the same constituency or sit for any constituency for a period of seven years, and no persons, candidates or not, so found guilty, can either hold office or vote, for a like term. Magistrates found guilty are reported to the Lord Chancellor and deprived of their commissions. Lawyers are reported to the courts and dealt with as in cases of professional misconduct. Liquor-dealers for the same offences are deprived of their licenses. The law goes further than this, however, and even fixes the amount a candidate may spend at an election, or which may be spent on his behalf, and the objects on which he may spend it, and compels him to file an account of the same, with vouchers, and swear to it, within thirty-five days after the election; and the punishment in case of perjury is seven years' penal servitude, besides the other disabilities for corruption. Now, what is the meaning of the enormous vote which is being polled in England, and the intense excitement which is being displayed under these most discouraging circumstances? Why do the workers work, and the candidates run, and the orators orate, and the rioters riot, and the voters vote, and the committees hire the halls, and the people crowd them, when there is neither money nor office in contest? An explanation of this by a Lifelong Democrat would be most interesting and possibly amusing.

The returns from the English elections show a Tory reaction, the extent of which, as it seems to astonish everybody in England, we have no difficulty in confessing astonishes us also. The surprise seems to be greater than in 1874 and even greater than in 1880. In the latter year the signs of what was coming were plainly visible in the provincial press. This year the provincial press has, though lukewarm, held pretty firmly to the Liberals, and the Tories went to the polls shivering in their boots. The causes of this smash-up would seem to be (1) the disgust of the public with the Sudan business, which they forced the Gladstone Ministry into undertaking, in a burst of maudlin enthusiasm about Gordon; (2) Gladstone's visible decline in energy, and probable early disappearance from the scene, to be succeeded by Chamberlain; (3) the fear inspired in all the monied middle class as well as in the aristocracy by Chamberlain's socialistic schemes, such as gratuitous education, compulsory purchase of land for laborers, and graduated taxation; (4) the capture of the suffering workingmen in some of the great towns by the "fair-trade" humbugs; (5) the solid voting of the Irish under Parnell's orders; and though last, not least (6), the rash production by the Radicals, before they were out of the woods, of the Church disestablishment plan, which has resulted in rousing the clergy, who, when thoroughly heated, and fighting for their property and social ascendancy, are very formidable enemies. A man who thinks that in assailing his privileges you assail the divine government of the world, may fairly be called the grizzly bear of politics. None but the foolhardy will stir him up till he is caught in a trap of some kind. Just now it is reasonable to expect that the two English parties in the House will be so nearly equal in strength that Parnell and his cohorts will be master of the field. That the Tories, who are now chuckling over the assistance he has given them, will find him a stern and relentless master, who will make them eat dirt every week, is the great fact of the situation.

Frigid Iceland is growing warm in her efforts to secure a larger share of self-government. The Constitution of 1874, which was wrested from Denmark by the growing repugnance of the islanders to royal rule, gives the country a legislative assembly, called the Althing; but as the Danish King nominates the eight members of the upper branch and exercises an absolute veto power regarding all measures passed, the people have never been satisfied with it. To increase their discontent, the chief of the Icelandic Department of the Danish Government has been an Icelander who appeared to side against his countrymen, and who always took a one-sided and illiberal view of the new Constitution. The leading newspapers of Reykjavik, the capital, have for years been agitating the question of a revision; and at the last sitting of the Althing a bill proposing such a revision was passed by a three-fourths vote in the lower branch, and, more surprising still, with but one dissenting voice in the upper. The principle at bottom is that Iceland shall be governed through a ministry who shall be responsible to the Althing, while still acknowledging allegiance to the King, and the movement is, of course, in the direction of national independence. Unfortunately for the Icelanders, there is not much prospect that the Copenhagen Government will look with favor upon any such project. But unless there is soon a change in climatic conditions, there will not long be any quarrelling over political questions, because there will be no people left to quarrel. The past year has been one of exceptional cold, or, more properly, of cold which would once have seemed exceptional, but which now appears to be becoming the rule: the spring was very late, the summer only "a green winter," and the prospect for the winter is most discouraging. The country has not yet recovered from the recent "famine years," and it begins to look as though nature meant to put an end to the nation.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 25, to TUESDAY, December 1, 1885, inclusive.]

DOMESTIC.

THE country was startled on Wednesday night by the announcement that Vice-President Thomas A. Hendricks had suddenly died of paralysis of the heart at his home in Indianapolis. Mr. Hendricks had had premonitory symptoms for several years, and had discussed a possible sudden death with his wife, but he had been in fairly good health for several weeks, and was about his business as usual until Wednesday morning, when he kept his room. He died about 4:45 P. M., nobody being with him at the time. In Washington the news was received at first with incredulity. It was announced to the President by a despatch from W. H. English. A Cabinet meeting was immediately called, and a proclamation issued to the country announcing the event and ordering the usual display of mourning symbols. The President and Cabinet at that meeting decided to attend the funeral, which was fixed for Tuesday.

Thomas A. Hendricks was born at Zanesville, O., September 7, 1819. In 1843, at the age of twenty-four years, he began the practice of law at Shelbyville, Ind., and was successful. He was elected to the State Legislature in 1848, and to the State Constitutional Convention in 1851, where he so distinguished himself that he was sent to Congress. During his second term at Washington he brought down on himself a storm of abuse by voting for the repeal of the Missouri Compromise. He pleaded that he did so in support of popular sovereignty, but his constituents were deaf to excuses. He remained in private life for a few months only, when President Pierce, in August, 1855, tendered him the appointment of Commissioner of the General Land Office. His management of the Land Office is generally regarded as creditable. In 1860 he was the Democratic candidate for Governor of Indiana, but was defeated by Henry S. Lane (Rep.). He was elected to the United States Senate for the term from 1863 to 1869; was defeated for Governor before his term expired by Conrad Baker, by 800 majority, but was elected in 1872 by 1,200 majority. The State in that year gave General Grant 6,000 majority. Mr. Hendricks was a candidate for President before the Convention of 1868, and by 1876 he had rallied a large following, but his party enemies in his own State defeated him. He, however, accepted second place with Tilden. He denounced Governor Tilden's course during the exciting months following the election. Again he was a candidate for President in 1880, and was again defeated by the McDonald faction in his own State. Last year he failed of the first place, but accepted the second, and worked hard for the success of the ticket in Indiana, which he carried by a good majority. He has since been regarded as the representative of the spoils-seeking element of his party. In private life he was highly esteemed for his courtesy, integrity, and ability.

The body of Vice-President Hendricks was on Sunday removed in solemn procession from his late residence to the Court-house in Indianapolis, where it lay in state during the afternoon and evening. President Cleveland decided on Sunday not to attend the funeral, and explained his action as follows: "I am now reminded by some of the best and most patriotic and thoughtful of our citizens that the real and solemn duties of my office are at the national capital, and that in the present peculiar and delicate situation I ought not to take even the remote chance of accident incident to travel, to gratify a sentiment so general and characteristic as that involved in this subject. I have been profoundly impressed by these considerations, but most of all influenced by their strong and unanimous presentation by the devoted friends of the late Vice-President living in his State and city, and their endorsement by the noble and patriotic woman who, in the infinite sorrow of her widowhood, reflects the spirit and character of her honored husband in her solicitude for the public good. I am now certain that neither my desire, nor the sentiment referred to, nor the difficulty that attends in this case a change of design, nor any stubborn idea of heroism, will justify me in subjecting the country to any greater chance of disaster than attends my performance of strict duty here, and that I ought not to inflict upon my countrymen even the unrest and anxiety attending my departure, absence, and return in attendance upon the funeral ceremonies."

The Vice-President's body was on Monday viewed by about 40,000 people. At 4:15 o'clock the doors of the Court-house were closed and the body was borne to Mr. Hendricks's late home, where it remained until after 11 o'clock on Tuesday morning, when a solemn procession bore it to the Cathedral of St. Paul. The coffin reached the church about 11:40 o'clock. The officiating clergy there were Bishop Knickerbocker, the Rev. Dr Stringfellow, of Montgomery, Ala.; the Rev. Dr. Fulton, of St. Louis, a former rector of St. Paul's, and the Rev. Dr. Jenckes, the present rector. In their robes they met the body at the main entrance of the cathedral on Illinois Street, and, preceded by a guard of the Indianapolis Light Infantry, the body was borne up the central aisle. The feature of the services was an address by the Rev. Dr. Jenckes, praising the integrity and consistency of the Vice-President's life. A great procession of 15,000 people escorted the coffin to its tomb in Crown Hill Cemetery. The line of march was about five miles in length. The procession consisted of civil and military bodies, members of the Cabinet, ex-President Hayes, Judges of the United States Courts, Senators, and Representatives. The city of Indianapolis was crowded during the day. It is estimated that fully 75,000 strangers were present. Memorial exercises were held in other places, and there was a partial suspension of business in large cities after 12 M.

The Vice-President's death leaves the country without any one in the line of succession to the President, there being no President pro tempore of the Senate or Speaker of the House.

The annual report of the Comptroller of the Currency recommends the accumulation of a safety fund, in anticipation of the redemption of the national debt, by which to secure the circulation of national banks. The Comptroller says: "For a beginning, it might be safe to authorize banks to issue circulation amounting to 90 per cent. of their capital, 70 per cent. to be secured by an equal amount of United States bonds at par value, the remaining 20 per cent. being issued without other security than a first lien on such assets. But if the law should provide for the accumulation of a safety fund in the manner suggested, then, as such safety fund increased, the percentage of circulation unsecured by bonds might be increased, as the diminution of the public debt might require and the safety fund warrant."

It is said at the Treasury Department that there has been an increase instead of the usual decrease in the public debt during the month of November. The receipts during the month have been light and the disbursements unusually heavy. The payments on account of pensions alone amount to about $11,000,000.

The replies to Secretary Manning's circular of inquiry for views on tariff revision have been classified far enough to show that the correspondence when forwarded to Congress will be a strong popular protest against a tariff agitation.

The report of the Third Assistant Postmaster-General for the last fiscal year shows that the total postal revenue was $42,560,843, while the expenditures, actual and estimated, including compensation to Pacific railroads for mail carriage, were $50,942,415, leaving the excess of estimated total cost of service over gross receipts, $8,381,571. The gross receipts were $765,114 (or 1.7 per cent.) less than those of the year ended June 30, 1884. A part of the decrease may be attributed to the increase of the unit of weight on second-class matter from two ounces to four ounces without a change in the rate of postage, but a more potent factor was the stagnation of business throughout the country.

Civil-Service Commissioner Edgerton denies the report that the Commission will at once remove the age restriction which renders veterans of the Confederate army ineligible to appointment in some branches of the service. Changes in the age qualifications, he intimates, will only be made upon evidence that amendments to the present requirements would be beneficial to the service.

The Prohibitionists on Wednesday carried Fulton County, Georgia, in which Atlanta is situated, by 219 majority out of a poll of nearly 8,000 votes. It was one of the most exciting contests ever known there. The Prohibitionists now declare that they will not rest until they have carried the whole State. The anti-Prohibitionists will contest the result. The feature of the election was the division of the negro vote.

Serious miners' riots took place in the Fourth Pool, Washington County, Pennsylvania, on Friday. About 200 strikers assailed non-union men in the mines, and seriously injured a number of them. The strikers were alarmed by the arrival of a large Sheriff's posse on Friday evening. A number of them were arrested. Quiet was restored on Saturday. In the Second Pool, however, the miners were intimidated by strikers, but no violence was used. Apprehensions of an outbreak still continue.

Major-General Alexander Shaler, commanding the First Division National Guard, President of the Board of Health of this city, and Secretary of the Armory Board, was arrested on Monday evening on a warrant charging him with bribe-taking in connection with the purchase of armory sites for the city. After a hearing on Tuesday he was released on $10,000 bail.

Peter Donohue, a California "Forty-niner" and a prominent figure in Pacific Coast financial circles, died on Thursday.

Francis N. Bangs, a prominent lawyer of this city, died in Florida on Monday night. He was fifty-seven years of age. He was a prominent Republican, and was at one time President of the Bar Association.

FOREIGN.

King Alfonso XII., of Spain, died on Wednesday morning, in El Pardo, of consumption, accelerated by dysentery. He was the ninth in lineal descent from Louis XIII. of France, a period of 273 years. He was born November 28, 1857. After the revolution of 1868, his mother, Queen Isabella II., had to leave Spain, selecting as her home the château of Pau, placed at her disposal by the French Emperor. Alfonso was universally regarded in Spain as illegitimate, having no claims to the throne except that he was the son of his mother. He received the usual education of a Bourbon prince, partly at Sandhurst, England. In 1870 his mother renounced, in his favor, all her claims to the crown, and on December 30, 1874, Alfonso was proclaimed King of Spain. He accompanied his army in the campaign against the Carlists, and, after their overthrow, returned to Madrid in triumph, in March, 1876. Alfonso was married twice, his first wife having been his cousin, Maria de los Mercedes, who died five months after the marriage, aged only eighteen. Three years later, in 1879, he married Maria Christina, daughter of the Archduke Charles Ferdinand of Austria. He leaves two daughters, aged three and five years respectively. During his reign two attempts on his life were made.

The body of King Alfonso was brought to Madrid on Friday with great pomp and ceremony. Two thousand carriages were in the

procession. On arriving at the palace the coffin was carried by grandees from the car to the hall of the palace.

Princess Mercedes, the five-year-old daughter of Alfonso, will be Queen of Spain under the regency of her mother, Christina. Zorilla has started for Spain, and it is believed that his purpose is to foment a rebellion. Precautions have been taken throughout Spain against a Carlist rising.

The members of the new Spanish Ministry are Fusionists, except three who belong to the Dynastic Left. They are as follows: Señor Sagasta, Prime Minister; General Jovellar, Minister of War; Señor Camacho, Minister of Finance; Señor Ries, Minister of Public Works and of Public Instruction; Señor Gamazo, Minister of the Colonies; Señor Beranger, Minister of Marine; Señor Gonzales, Minister of the Interior; Señor Alonzo Martinez, Minister of Justice; Señor Moret, Minister of Foreign Affairs. Señor Moret is a free-trader

The Spanish Cortes will meet on December 27. The new Cabinet has been approved throughout Spain.

Queen Christina, in an interview on Friday with Premier Sagasta, expressed her desire that his policy be one of moderation rather than of repression, and said she wished to appeal to the chivalry of the people in defence of the crown of her daughter. As soon as the new Ministry is sworn, the Cortes will be convoked to proclaim Mercedes Queen and ratify the regency of Christina.

The manifesto of Don Carlos, promising to confirm to the Spaniards all their present civil and religious liberties, is considered a direct bid for the throne, and is also interpreted as a prelude to a proposal of marriage of Don Carlos's son, Prince Jaime, and the Princess of the Asturias, the late King's eldest daughter, in the event of no heir to the throne being born.

The body of King Alfonso was removed on Sunday to the Palace of the Escurial. It was followed thither by the royal family, the members of the Cabinet, and a long procession of the nobility, and other mourners. The funeral will be on December 10.

Marshal Francisco Serrano y Dominguez, Duke de la Torre, ex-Dictator of Spain, died on Thursday. He was the son of a Spanish General, and was born near Cadiz in 1810. Entering the Spanish army at an early age, he was rapidly promoted to high rank during the civil wars which followed the death of Ferdinand VII. Serrano succeeded in 1843 in bringing about the fall of Espartero, and after the restoration of the Queen's mother he joined with Narvaez in his attempt to overthrow Olozaga. In 1846, soon after the marriage of Queen Isabella, Serrano acquired such an influence over her that frequent quarrels with the King Consort were the result. He took an important part in effecting several changes of Ministry, and was himself twice Minister of War for brief periods. In 1860 he was sent to Cuba as Captain-General, and he held this position for three years. For his efforts to bring Santo Domingo under Spanish rule during this period he was rewarded on his return home by being made a grandee of the first rank, with the title of Duke de la Torre. The revolution in 1868, when Queen Isabella fled from Spain, brought Serrano into great prominence. He was the chief actor in the revolution, and the Junta at Madrid made him President of the Council of Ministers and Commander-in-Chief of the army. Then Serrano was elected Regent, and acted in that capacity until Prince Amadeo accepted the Spanish crown. When Alfonso was proclaimed King in 1874, Serrano retired to France, but soon returned to Madrid. He continued to take an active part in politics, and in 1883 was Spanish Ambassador to Paris.

King Milan on Wednesday sent a message under a flag of truce to the Bulgarian advanced line, proposing peace at the request of the Powers. The Bulgarian commander sent the message to Prince Alexander. The latter declined to accept the proposition on the ground that Bulgaria had not received such a request from the Powers. Prince Alexander refused to consider a peace proposal until the Servians had evacuated the Widdin district, and the amount of war indemnity payable by Servia to Bulgaria had been fixed. At 9 o'clock on Thursday morning Prince Alexander, at the head of 50,000 Bulgarian troops, entered Servia and advanced upon Pirot.

It was officially announced on Wednesday that King Milan had accepted the armistice proposed by the Powers. The Bulgarian losses in the campaign up to that date were 200 dead and 2,000 wounded, 350 of the latter being severely injured. Sixty-four Servian officers have been killed or wounded.

It was rumored in Vienna on Friday that King Milan had secretly visited the Emperor of Austria for the purpose of obtaining his assistance.

Advices from the front on Saturday announced that Prince Alexander had captured Pirot at the point of the bayonet. The Porte on that day telegraphed Prince Alexander to stop his advance in Servia. It was reported that he was willing to grant an armistice if Servia would withdraw her troops from Widdin and pay an indemnity of $5,000,000.

An armistice between Servia and Bulgaria was concluded at 3:30 o'clock on Saturday afternoon. It was brought about by the Austrian Minister at Belgrade, who gave notice to Prince Alexander that if the Bulgarian troops advanced any further in Servian territory, Austria would cross the frontier and fight them. The Servians are indignant at the armistice. The Russian newspapers appear anxious about the situation, and consider that the attitude of Austria is tantamount to openly siding with Servia. They ask how the action of Austria will influence Russia, who, as a signatory Power to the Treaty of Berlin, loyally refused to support Bulgaria.

General Leshyanin continued on Tuesday to bombard Widdin. It is expected that general fighting will be resumed in a day or two in disregard of the armistice, as Prince Alexander demands possession of Zaitshar and Pirot as a guarantee of the payment of a war indemnity by Servia. The Servian Ministry has resigned. Austria is preparing to interfere with troops. England has protested.

The Czar of Russia has issued a significant order praising the bravery of the Bulgarian and Rumelian troops, and naming some of the Russian officers who fought with them, and whose merit he promises not to overlook.

The British Parliamentary elections continued throughout the week, the remarkable Conservative reaction being unabated. Lord Randolph Churchill carried Paddington on Thursday by a large majority. Mr. Gladstone's ex-Ministers, Mr. Childers and Mr. Shaw-Lefevre, and two of his under secretaries, were defeated. The Conservatives carried five of the six Manchester divisions. The sugar operatives of East St. George's returned Mr. Ritchie, an advocate of countervailing duties. In Hampstead Sir H. Holland (Conservative), who received 2,785 votes, defeated the Marquis of Lorne (Liberal), who received 1,810. In Westminster Mr. Burdett-Coutts polled 3,996 votes, defeating Professor E. S. Beasley (Liberal), the famous Positivist writer, who polled 1,736. Four Conservative members were elected from Belfast. Justin McCarthy, Nationalist, was defeated in Londonderry by C. E. Lewis, Independent, by 29 votes.

Sir Charles Dilke (Lib.) was elected to Parliament from Chelsea by only 175 majority. At the previous election he received 3,000 majority.

Charles Stewart Parnell and Timothy Michael Healy, Nationalists, have been elected for the two divisions of Cork City. The vote was as follows: Parnell, 6,716; Healy, 6,536; Pike, 1,464; Bainbridge, 1,401. The last two are Conservatives.

The polling in the Scotch burghs on Friday showed an undiminished number of Liberal votes throughout Scotland. There are no symptoms of a Conservative reaction in that quarter. The predictions of the Carlton Club members, based on reports of agents, show that they are hopeful of only 25 majority over the Liberals, thus leaving the balance of power in the hands of the Parnellites. In Midlothian on Friday Mr. Gladstone received 7,879 votes to 3,245 for Mr. Dalrymple, the Conservative candidate. This result was received with great rejoicing by the Liberals in London.

A report was current in London on Saturday night that Mr. Gladstone had intimated to Lord Salisbury a willingness, in the event of Conservative success at the polls, to give the whole Liberal strength to the support of the Government on "all reasonable measures, in order to prevent the necessity of yielding to the ruinous course of placing England under Irish dictation." Mr. Gladstone, in a speech on Saturday night, was hopeful that Scotland and Wales would return ten Liberals to one Conservative, and that the Liberal cause would in the end triumph. There were election riots in Dublin, Dundalk, and Londonderry on Sunday between Parnellites and their opponents.

All the English borough election returns are now complete except Newcastle. The following are the figures: When Parliament rose the Liberals held 184 English borough seats, the Conservatives 87. Now the Liberals hold 107, the Conservatives 116, the Parnellites 1. Thus the Liberal majority of 2 to 1 is changed to a minority of 9. In the counties the Conservatives have secured 23 against 19 Liberals. The London *Standard* estimates that the Conservatives will have a majority of 20 over the Liberals.

Mr. Gladstone, speaking at Buckley, Flintshire, on Monday, said that the Liberal reverses were due to the tomfoolery of nominating duplicate candidates, the miserable imposture called fair trade, and, lastly and chiefly, the Irish vote in Great Britain.

The Duke of Somerset died in London on Saturday at the age of eighty-one. He succeeded to the title as twelfth Duke in 1855. Lord Palmerston appointed him First Lord of the Admiralty in 1859, but he resigned the office in 1866, upon the fall of the Russell Ministry. He held the office of Lord-Lieutenant of Devonshire from 1861 until the time of his death. In 1871 he published a work entitled 'Christian Theology and Modern Scepticism.' His brother succeeds to the title.

King Theebaw, of Burmah, becoming alarmed at the rapid approach of the British expeditionary force, notwithstanding the resistance offered by the Burmese, sent a messenger to General Prendergast begging him to grant an armistice for the purpose of peaceably setting the difficulty between Burmah and the Indian Government. General Prendergast in reply demanded the surrender of the Burmese army and Mandalay, the capital, stating that only then could he entertain any request looking to a settlement of the dispute. King Theebaw acceded to the terms, and the Ava forts, with twenty-eight guns, were turned over to the British troops. A garrison was placed there, and the British troops proceeded to Mandalay on November 28.

A letter from Massowah asserts that Osman Digna is not dead, as was recently reported, and that he has avenged the prisoners hanged in Abyssinia by massacring all the people of Kassala, Europeans included, and reducing the town to ruins. General Grenfell telegraphs to Cairo that bodies of rebel cavalry and infantry are demonstrating on the left bank of the Nile near Koshay.

The execution of the eight Indians found guilty of murders at Frog Lake and Battleford occurred at Battleford on Friday morning. Wandering Spirit was the most prominent.

THE PRESIDENCY OF THE SENATE.

We venture to hope that the efforts which the Blaine influence in the Republican party is making to "boom" General Logan into the Presidency of the Senate will not be successful. Of all the members of the Senate, he is the least fitted by temperament and ability for this position. In an ordinary election for a presiding officer he would never be thought of. He is pushed now by men who are so blinded by partisanship that they are unable to realize what they are doing. They are not aiming to put the most fit man in the position, but to capture a possible Presidential succession.

The indecent aspect of this movement is that it is based openly upon the expectation of President Cleveland's death. Every dictate of patriotism is against the election of any Republican on such a calculation as this; but to elect a Republican like Logan would be simply to count upon a prize in the "lottery of assassination." Probably there is no man in the Republican party who would use the office of the Presidency, were he to come into it during the period pending a new election, more recklessly for partisan purposes than Logan would. He would reverse the whole civil-service reform policy of the present Administration with a suddenness which would throw the whole country into disorder and possible anarchy. His sole idea of statesmanship would be to "fix things" for his own election to the office. Instead of bringing to the country the feeling of stability and confidence which would be of supreme necessity in a crisis so unusual and dangerous as a Presidential vacancy, we should have in him every provocation to disorder. So true is this of him that his mere position in the line of succession would be a constant temptation for some weak-brained "crank" to imitate Guiteau.

It is astonishing that the Blaine partisans cannot see this. Probably a good deal of their zeal is inspired by hatred of Senator Edmunds, whom they know to be the most fit man for the position, but whom they do not wish to see thus honored because of his unwillingness to support Blaine last year. But this is no excuse for their course. They ought to see that the only patriotic thing to do is to urge the passage of a law which shall put in line of the succession, in this and in all future cases, some member of the Administration which is in power. Every Republican who cares either for the party or the country ought to use his influence in favor of the early passage by the Senate of Senator Hoar's bill, which was passed by the Senate last year and not voted upon by the House, vesting the succession in the President's Cabinet. This bill provides—

> "That in case of removal, death, resignation, or inability of both the President and Vice-President of the United States, the Secretary of State, or if there be none, or in case of his removal, death, resignation or inability, then the Secretary of the Treasury, or if there be none, or in case of his removal, death, resignation or inability, then the Secretary of War, or if there be none, or in case of his removal, death, resignation or inability, then the Attorney-General, or if there be none, or in case of his removal, death, resignation or inability, then the Postmaster-General, or if there be none, or in case of his removal, death, resignation, or inability, then the Secretary of the Navy, or if there be none, or in case of his removal, death, resignation, or inability, then the Secretary of the Interior, shall act as President until the disability of the President or Vice-President is removed or a President shall be elected; such officer being eligible to the office of President under the Constitution, and not under articles of impeachment by the House of Representatives of the United States at the time the powers and duties of the office shall devolve upon him."

That is the peaceable, orderly, and just way to provide for such contingencies as we are confronted with at present. It is the only patriotic way. With the Cabinet in line of succession there would be no motive for "removing" the President by violence. When the people elect a President it is with the deliberate purpose of trusting the party which he represents with the conduct of the Government for four years. To attempt the capture of the Government for the defeated party at any stage of that period is a trick which is so unpatriotic and indecent that we do not believe the Senate will for a moment consider it. It is beside the question to say, as a local Blaine organ says, that Logan has a claim because, "in a national election covering a continent peopled by 55,000,000 of souls, it is true that Logan fell short of the Vice-Presidency by the whole of 1,100 votes." Logan fell short not merely 1,100, but 62,683 on the popular vote; but if he had fallen short only two votes, that would furnish no justification for trying to put him in the line of succession now. He is a defeated candidate, and if he were the best instead of the worst man for the place, he ought not to be put into it on the partisan reasons which his advocates give. The course for the Senate to follow is to put some judicially-minded man in the chair, in whose patriotism the whole country has confidence, and then pass at once Senator Hoar's bill. We trust that it has the wisdom requisite for this course.

THE PHILADELPHIA POST-OFFICE.

The friends of civil-service reform in Philadelphia have been much troubled, and not unreasonably, by the removal of Mr. Huidekoper, the Postmaster of that city. The Post of the Grand Army, too, to which Mr. Huidekoper belongs, have taken the matter up, and protested against the removal in strong terms; but they confess that they do not know whether there has been cause for it or not. Now we are, as our readers know, firm believers in tenure during good behavior, but we have been very chary, ever since the Democrats came into office, about finding fault with removals. We have felt very sure that no service officered as the civil service of the United States has been during the last twenty-five years, exclusively with partisans, for partisan reasons, could be in a sound or healthy condition, and could fail to need much weeding out. Our belief that such weeding out would be fairly done, making due allowance for human frailty and inevitable ignorance or deception, by President Cleveland, was one of our reasons for supporting him. Moreover, we never have felt quite equal to asking the Democrats, after twenty-five years of rigid exclusion from the public service, to treat every Republican found in office in 1885 as entitled to the place by divine right or any other right. We have felt that there must be some sort of redressal of the balance between the two parties, some diminution of the monster abuse of proscription on political grounds, before we could fairly demand rigid permanence in office during good behavior.

We have, therefore, confined our efforts, for what they were worth, and as far as our knowledge went, to seeing that new appointees were good men. For instance, highly as we thought of Captain Bacon, we should hardly have ventured on a protest against his removal had he been replaced by a man equally competent in character, if not in experience. It was when the reasons of his removal were revealed by the extraction of Sterling from his pothouse to succeed him, that we cried out against it. We have always thought, too, as have most other friends of reform, that the Civil-Service Act was wise in leaving the power of removal wholly untouched. The complete possession of that power—that is, the right to use it without giving reasons—we deem essential to the discipline of the service. It is impossible to hold the head of any organization responsible for its efficiency if he cannot get rid of subordinates whom he finds it difficult, for any reason, to use or work with effectively.

We make these remarks by way of preface to what we are about to say of the Huidekoper case, about which we have received, and are receiving, letters of remonstrance from many friends of reform. We might, under the rule we have laid down for ourselves, in view of the acknowledged excellence of the appointment of his successor, have refrained from all comment on it. But so much has been said of Mr. Huidekoper's fitness and blamelessness that we have taken pains to acquaint ourselves with the causes assigned for his removal. He has been, we believe, a good postmaster, from the Republican point of view. His office has been, that is to say, as efficiently managed as a partisan could manage it. But a partisan he has been in his management of it. He has rigidly carried out the old policy of political proscription both in his appointments and removals. He has openly refused to appoint men, otherwise qualified, because they were Democrats. He has also openly announced that his subordinates held their places on condition of being and remaining Republicans. He permitted assessments to be openly levied on them in 1884 for the support of Blaine, on a large scale, by the Republican State Committee. Some of his appointments, too, appear to have been of a scandalously partisan character, particularly one in 1883, of a man convicted of keeping a disorderly house, and sentenced to a year's imprisonment for it, and of another convicted of violating graves. Both these men were until very recently in the post-office. Worse than, or as bad as anything, is the charge, which seems well sustained, that he secretly, if not openly, countenanced, if he did not assist in, the distribution of the filthy stories about Mr. Cleveland which formed so large a part of the Blaine campaign literature. If he did not initiate this sort of thing in Philadelphia by a resolution in the Union League Club, he is much belied.

The Philadelphia *Times* published in 1881 a correspondence of his with a candidate for a carriership, an old soldier named Deegins, who, after honorable service in the war, came to him strongly recommended by Senator Hawley, Mr. Welsh, and Mr. Gresham, who had employed him in the Centennial Exposition.

Deegins received the following letter from Mr. Huidekoper, and the original is on file in the Department at Washington :

POST-OFFICE, PHILADELPHIA, January 11, 1881.
James H. Deegins, Esq., 1327 *Castle Avenue:*

SIR: Since you were in my office with Major Butler I have been informed that you not only did not support the Republican party last fall, but worked against it, and I beg that you will call here and see me in reference to the matter before considering yourself a sub-carrier, and before you make any arrangements for uniform and for your bond. The appointment, so far as made, is revoked until I am satisfied that you have been and are an earnest Republican.

Very respectfully yours,
H. S. HUIDEKOPER,
Postmaster.

In short, we advise all our reform friends not to make a martyr of Mr. Huidekoper. He is doubtless, in private life, a most estimable man, but he is not the stuff out of which reformers are made. He has, we believe, undergone a change of heart since November last. These eleventh-hour sinners are always welcome to our ranks, but we cannot in common decency ask the Democrats to keep them in office on reform grounds.

PROLONGING HUMAN LIFE.

THE final test of sanitary science is its ability to prolong the average term of human life, and thus to increase the working capacity of each new generation. Conclusive evidence that it has already produced an appreciable effect in this direction is furnished by a report just issued from the office of the Registrar-General of Births, Deaths, and Marriages in England. The facts brought out in this report are of scarcely less interest to Americans than to Englishmen.

Deductions from vital statistics can only be safely made when the data cover a long period of time. It is now possible in England to compare the summaries of several decades during which the records of deaths have been kept upon a national system. The first noteworthy thing brought out by a comparison of the figures for the ten years ending in 1880 with previous periods of the same length is the reduction in the death-rate. During the last decade the mean annual rate was only 21.27 per thousand, which is much below the showing for any previous ten years since registration began. As compared with the decade between 1860 and 1870, the male death-rate has fallen 4.24 per cent. and that of females 6.02 per cent. In other words, about one-twentieth less people died out of every thousand in the population between 1870 and 1880 than between 1860 and 1870.

This, of course, involves a raising of the average age at death. It was discovered long ago, by a study of the mortality in England between 1838 and 1854 (which is, broadly speaking, a generation ago), that, upon the basis then existing, one-half of a million of males born during that period would have died before the end of the forty-fifth year, and one-half of a million females before the end of the forty-seventh year. A new table, based upon the figures for the last decade, shows that one-half of the males would not have died until after the end of the forty-seventh year, and one-half of the females would still be surviving at the end of the fifty-second year. The mean lifetime of males according to the old table was only 39.91 years, whereas by the new computation it is 41.35. That is to say, a year and a half has been added to the "expectation of life" for the male infant born nowadays as compared with that which his father inherited. The gain for a girl baby over her mother is even more marked, amounting to about two years and three-quarters.

How it is that human life has been thus increased appears clearly enough from the statistics as to the relative mortality from zymotic diseases during the two periods. With the single exception that whooping-cough has remained stationary, there is not one such disease of which the mortality has failed to diminish, while in some cases the gain has been extraordinary. Thus the annual deaths per million living persons from diarrhœa have fallen from 1,076 to 935; from scarlet fever, from 972 to 716 ; from diphtheria, from 185 to 121 ; and from typhus, enteric, and ill-defined forms of continued fever, from 885 to 484. Many of these are what are often called "filth diseases," from the fact that they can so often be traced directly to bad drainage, impure water, and other such causes. These are precisely the evils against which sanitary legislation has been chiefly aimed, and the marked diminution of deaths from the diseases which they cause is a mathematical demonstration of the value of such legislation.

Hardly less significant is the fact that the deaths from phthisis, as the English usually call the disease which in this country is commonly styled consumption, have fallen from 2,475 to 2,116 a year per million living persons. It is true that the English public is cautioned against giving undue weight to this apparent gain, by the suggestion that it may in part be due to a more exact statement of the causes of death upon medical certificates; and this is the more likely from the fact that the fatality from other forms of diseases of the respiratory organs has increased. But the experience of Massachusetts goes to show that medical science is really succeeding in doing something to check the ravages of this terrible disease. In Massachusetts alone of our States trustworthy vital statistics have been collected for a long series of years, and they show that the number of deaths from consumption has fallen from an annual average of 3,716 per million living persons in the decade beginning with 1857 to only 3,130 in the decade closing with 1884. A portion of this decrease may fairly be ascribed to the infusion in the population of a large foreign element less subject to consumption than the native, but, after making due allowance for this cause, there still remains reason to believe that a better knowledge and more general practice of the laws of hygiene render people less liable to death from this cause now than formerly.

It is sometimes objected that from an economic point of view the community gains nothing by the reduction of the death-rate, inasmuch as this results only from saving the lives of sickly children who would otherwise die in infancy, or from prolonging the lives of weak elderly persons who have fallen into helpless senility. But investigation shows that this is a mistaken view. A most pronounced effect of improved sanitary methods is to save the lives of men and women who would otherwise fall victims to disease during their productive years. The reduction of mortality from zymotic diseases establishes this. With the exception of scarlet fever, diarrhœa, and diphtheria, these complaints are most fatal to persons who have survived childhood. For example, it has been shown by Massachusetts records covering a score of years that fully half of the deaths from typhoid were those of people between the ages of twenty and sixty, while more than three-fourths of those who died from consumption were between the same years. To diminish the fatality of such diseases is thus, in large measure, to save to society the services of people who have passed childhood and not reached old age. The English statistics bring out this truth very clearly, as they show that of the aggregate years saved to every million of people now born, as compared with their fathers and mothers, two-thirds are lived in the productive period of life —between twenty-five and sixty-five. The use of the public funds in improved sewerage, increased water supply, and other public sanitary measures is thus demonstrated to return a large income on the investment, purely as a business transaction, by increasing the working power of the community.

SHAKSPERE'S JUDGMENT OF JOYS AND SORROWS.

IT may be both quickly and truly said that Shakspere considered the happiness of men to lie in successful action connected with dignity of position, and that of women in undemanding affection. This conception of life is not now (if it ever was) very generally accepted ; honor and devotion are scarcely the common ideals of felicity. And in following out the suggestions of this observation, we trace with some exactness the difference of the joys and sorrows upon which Shakspere lays most stress, from those most familiar to the mind of our own day.

One of the first divergences, perhaps, to strike us is that that sensitiveness to the glory of an unspotted name which is now only felt by exceptional men with such keenness and intensity as deeply to affect them and strongly influence their lives, was in Shakspere's world a necessary attribute of every "loyal, just, and upright gentleman." "If it be a sin to covet honor, I am the most offending soul alive," they all felt ; and this "covetousness" made a word a blow, an insult a stain. Men were "pierc'd to the soul with slander's venom'd spear." On the other hand, this sensitiveness of honor quickened the blood to delights unknown to us. "My dancing soul doth celebrate this feast of battle with mine adversary," is the expression of such joy in expectancy.

> "The blood I drop is rather physical
> Than dangerous to me. . . .
> O let me clip ye
> In arms as sound as when I woo'd, in heart
> As merry as when our nuptial day was done,
> And tapers burn'd to bedward!"—

is uttered in the heat of joy in victory.

This keen zest in the pursuit of honor is conspicuous in the character of *Henry V.*, but his nature was only of larger and weightier coinage than that of other men : the stamp of all was the same. In his love-suit, again, he was not himself alone, but all men of vigorous life. "Before God, Kate, I cannot look greenly nor gasp out my eloquence, nor I have no cunning in protestation. . . . I speak to thee plain soldier. If thou canst love me for this, take me ; if not, to say that I shall die is true, but for thy love—by the Lord, no ; yet I love thee too"—finds its perfect echo in *Hotspur's* delightful domineeringness over *his* "Kate," and even in the jesting of *Cori-*

olanus to his "gracious Silence," and not less in *Othello's* wooing being the tale of the dangers he had passed.

Love as an engrossing interest to men is, for the most part, treated by Shakspere as a passion not unmanly, but, in its intensity, to some degree unheroic. Perhaps modern poetic art, modern fiction, and modern social life would be elevated in tone by some return to this point of view. Love is to Shakspere fitly but one of the pastimes of men's youth. *Othello* is the only strong and mature character whom he represents as dominated by it, and it dominated him through the agony of disappointed trust and confidence. If Shakspere includes it—"Honour, love, obedience, troops of friends"—among the blessings which should accompany old age, it is rather public love than private of which he thinks. Even in the rendering of the exquisite passion of *Romeo* there is to be felt a tone of indulgence, not of admiration. *Friar Lawrence's* reproaches—

"Thy tears are womanish; thy wild acts denote
The unreasonable fury of a beast:
Unseemly woman in a seeming man!"—

are preluded and concluded and enforced in other passages; passages which again may be amply paralleled from "Troilus," and even more forcibly from "Antony," as well as elsewhere.

On the other hand, Shakspere evidently found little human value in women whose simple and unconscious and involuntary tenderness to their lovers, their husbands, or their children (their sons, more strictly), was not of an engrossing nature. Even the manly emotions of *Volumnia* are of such feminine vehemence and intensity, are so involved in her motherhood, that in contrast with the soft loveliness of *Virgilia* neither has anything to lose in the comparison—like jewels and flowers. This is not the occasion to discuss the natures of the four principal women, *Cleopatra* and *Cressida*, *Lady Macbeth* and *Isabella*, to whom he gave other qualities than tenderness as the substruction of their characters; and we have already perhaps wandered too far from that discrimination of joys and sorrows which is our object. But the point of just these observations is to make clear that love was not dwelt on by Shakspere as for men one of the supreme joys; while, to his thinking, it was the life itself of women. "To be your fellow you may deny me; but I'll be your servant whether you will or no," is in all their hearts.

There are in Shakspere but few references, and no direct ones, to the felicities of domestic life. Among the few suggestions of it is *Polixenes's* delightful description of his "young prince," and *Macduff's* pathetic declaration, "I cannot but remember such things were, that were most precious to me"; and a quite unimportant passage at the close of "Titus Andronicus":

"Thy grandsire lov'd thee well:
Many a time he danc'd thee on his knee,
Sung thee asleep, his loving breast thy pillow."

In connection with honor, Shakspere believed dignity of position to be one of the elements of a fortunate life, and this almost equally for men and women; those cast down from a high estate were wretched indeed in his eyes:

"O, God's will, much better
She ne'er had known pomp! Though 't be temporal,
Yet, if that quarrel, fortune, do divorce
It from the bearer, 'tis a sufferance panging
As soul and body's severing."

Even if we consider these words to be a dramatic expression of the character of Anne Boleyn, the same thought recurs frequently in the plays.

Royalty, kingship, was to Shakspere's mind an essential glory, even though a mutable one; a glory which to the wearer was confused but not bedimmed by the infinite crowd of cares and the overwhelming responsibilities attending and surrounding it; a glory which to the beholder was dazzling and full of "controlling majesty." And never is the king more majestic in Shakspere's eyes than when, like other men, he is rejoicing in the satisfaction of honor:

"Ha, Majesty! How high thy glory towers
When the rich blood of kings is set on fire!"

And as no honor can be so nobly satisfied as the king's, so no grief can equal the king's in weight; for, "though his affections are higher mounted than ours, yet, when they stoop, they stoop with the like wing." Mighty grief is in itself majestic: "To me and to the state of my great grief let kings assemble," demands *Constance;* but when grief conquers the king himself the one majesty defrauds the other; usurping grief, in discrowning royalty, loses its own dignity, while the mere man in the king's robes cries out:

"Subjected thus, how can you say
To me, I am a King?"

Of all woes beneath those belonging to kings, exile counted to Shakspere as among the heaviest. "To be cast forth in the common air" was cruelly "deep a maim." And it was saying "Thus I turn me from my country's light to dwell in solemn shades of endless night," that men departed, to sigh their "English breath in foreign clouds, eating the bitter bread of banishment."

If the satisfaction of honor ranked as highest happiness to Shakspere, next, perhaps, we may place friendship. No more admirable pictures of it have ever been seen than those which set forth the relations of *Antonio* and *Bassanio*, of *Kent* and *Lear*, of *Brutus* and *Cassius*, of *Hamlet* and *Horatio*, of *Prospero* and *Gonzalo*, of *Cromwell* and *Wolsey*, even of *Orlando* to *Adam*, and of the sea-captain to *Sebastian*. And woman's friendships of scarcely less vigor and ability are not wanting: witness *Beatrice* and *Hero*, *Rosalind* and *Celia*, *Pauline* and *Hermione*, *Emilia* and *Desdemona*. The noble friendship for one dead expressed in the King's eulogy of *Count Rousillon* lies so outside the dramatic needs of the play, that it can scarcely be questioned that it is one of the few passages where a personal emotion and cherished remembrance of Shakspere's own life found utterance. It has the distinctively individual character of the portrait heads introduced into the great Italian paintings. Would that we knew—and yet why should we wish it?—who he was whose

"Plausive words
He scattered not in ears, but grafted them
To grow there and to bear;"

—words which Shakspere had treasured—"oft" hearing them "On the catastrophe and heel of pastime when it was out." The scorn the King represents him as feeling

"Of younger spirits whose apprehensive senses
All but new things disdain, whose judgments are
Mere fathers of their garments, whose constancies
Expire before their fashions,"

reminds us so immediately how lamentable *Mercutio* found it to be "afflicted with these strange flies, these fashion-mongers, these *perdona-mi's* who stand so much on the new form that they cannot sit at ease on the old bench," that it seems scarcely too ingenious to fancy that Shakspere's study of his own friend may have suggested to him some details in the painting of *Romeo's* friend.

Shakspere shows his knowledge, too, of false friends. Once and again as by the mouth of Buckingham he warns—

"Where you are liberal of your loves and counsels,
Be sure you be not loose; for those you make friends
And give your hearts to, when they once perceive
The least rub in your fortunes, fall away
Like water from ye; never found again
But where they mean to sink ye."

The overthrow of *Timon's* humanity was due to his loss of friends; his despair was not caused by his destitution of material wealth, but because the hearts of men

"That numberless upon me stuck as leaves
Do on the oak, have with one winter's brush
Fell from their boughs, and left me open, bare
For every storm that blows."

None of Shakspere's characters, save *Shylock*, consider riches as in themselves of worth. *Coriolanus* does not differ from these other largely-living men in "looking upon things precious as they were the common muck of the world." The great Cardinal "drew together" his "world of wealth," not for the enjoyment of luxury, but with purpose "to gain the popedom and fee my friends at Rome."

It is common to talk of Shakspere's so-called "grossness," sometimes excusing it by the grossness of his times. Grossness of verbal expression—that is, extreme openness and jocularity about things which are by us not spoken of—is of course frequent in his pages; but real grossness—that is, an undue interest in physical conditions and excitements—is, one may say, never to be found in him. So there is even no dwelling on the pleasures of eating and drinking, whether in the tone of Homer, of Anacreon, of Horace, or of Keats. The "philosophy" of eating is touched on by *Menenius* when commenting on the unkind reception *Coriolanus* had given *Cominius:*

"He was not taken well; he had not dined.
The veins unfill'd, our blood is cold, and then
We pout upon the morning, are unapt
To give or to forgive; but when we have stuff'd
These pipes and these conveyances of our blood
With wine and feeding, we have suppler souls
Than in our priestlike fasts. Therefore I'll watch him
Till he be dieted to my request,
And then I'll set upon him."

Falstaff's enjoyment of "an intolerable deal of sack" suggests mere jollity more than it does "dyeing scarlet," and it was no epicure who desired "A brewed posset of sack *without eggs*, simple of itself. I'll have no pullet-sperm in my beverage." "Spices, dates, and quinces," are our only hint of the quality of the feasting at the bridal of *Juliet*, with the "baked meats" which "furnished forth" the tables at marriages as at funerals. And there is only a dramatic interest in *Page's* "hot venison pasty," or *Slender's* "dish of stewed prunes," or in *Shallow's* excellent but commonplace dinner, "some pigeons, a couple of short-legged hens, a joint of mutton, and any pretty little tiny kickshaws," and his dessert, "a last year's pippin of my own graffing, with a dish of caraways and so forth." Yet it is to be remembered that Shakspere lived in days of extraordinary magnificence and incredible abundance of cookery; but he evidently concerned himself little with "the table."

Honor, power, friendship—the possession of these was a joy worthy of men. Loss of honor, loss of power, loss of friendship—these were their deadly griefs. All the gladness of women was summed up in loving; in love which could endure through cold disregardings, and bitter neglects, and cruel misapprehensions. But to them, as to the men they loved, loss of noble dignities was fatal to happiness.

NEW ROME.

Rome, November 6.

When the Italians entered the Porta Pia in 1870, they were quite aware that the transference of their seat of government from Florence to Rome would involve a large addition to the population of the city of the Popes. According to the popular estimate, the removal of the public offices alone involved the migration of 70,000 persons. The total number of inhabitants at the time of the extinction of the temporal power was only a little over 225,000, who occupied but a portion of the wide area enclosed by the walls of Aurelian. The Government determined, however, not to leave the provision of additional houses to chance, but to proceed on a regular plan which should be executed as the population grew. Hence the origin of the well known *Piano regolatore*, which, it was supposed when it was issued, had settled the question as to what the Rome of the future was to be. There is no

need to trouble you with the details of the scheme. It will be enough to mention the principles on which it was founded. Its first aim was to preserve free from all building the sites where the remains of ancient Rome are most abundant, and which had been explored, or it was intended to explore. Accordingly, a ring was formed including the Forum, the Palatine Hill, and the Colosseum, which was not to be invaded by houses; a similar zone was drawn round the Baths of Caracalla. The New Quarters were placed on the Esquiline, in the Prati di Castello, and other districts where antiquities are comparatively few. The second aim was to avoid as far as possible interference with the city of the Popes. New bridges are to be built, and it is necessary to open up approaches to them. A few piazzas have been widened, partly to facilitate traffic, partly for archæological reasons, as, for instance, at the Pantheon, where houses have been pulled down which concealed the remains of the baths of Agrippa, and more are to be removed. It was also essential to provide proper means of communication between the city and the railway, and a wide street has been constructed which, starting from the railway station, has already reached as far as the Via de' Cesarini and is to be continued to the Bridge of S. Angelo. This was probably unavoidable. The *Piano regolatore* may, therefore, be said to have been framed on conservative principles, and may be accepted as on the whole well conceived.

The chief complaint made against its execution has been the destruction of the gardens of the Farnesina, famous as the spot where Agostino Chigi threw into the river the plate used at the banquet he gave to Leo X.; and also interesting for its associations with Michael Angelo. It is asserted by many that the widening of the Tiber, which was the excuse for this piece of vandalism, might quite as well have been effected on the opposite bank, and that the real motive was to spite a *clericale*. The villa had been let for a term of ninety-nine years to the Duca di Ripalda, formerly Spanish Ambassador at Paris, and a warm friend of the Bourbons; but as the Duke had altogether retired from public life, it seems hardly credible that political ill-will prompted this ill-advised act. The Duke had a further claim to consideration from his having restored the famous frescoes, which had been sadly neglected and ill-treated, not by the cheap method of repainting them, but by a careful and costly process of cleaning, and had liberally admitted visitors to see them. As every one knows, the upshot has been the closing of the villa against the public.

But however excellent the principles of the *Piano regolatore*, it is now being completely superseded. It was drawn up on the supposition that the annual increment of population would be under 10,000. So attractive has the capital proved that the number of immigrants is at this moment about 2,000 a month, and there is naturally a pressing demand for habitations. Consequently, new houses, often very badly built, are springing up on all hands within and without the walls in sites never thought of by the framers of the *Piano regolatore*. Money is pouring into the pockets of the Roman princes and other owners of the soil, for land that in 1870 possessed little more than a nominal value is now selling at so much a metre; and the famous villas which added so greatly to the charm of the city are being broken up into building lots. The Villa Wolkonsky has been sold and so has the Villa Ludovisi; and though a desperate effort is being made to prevent Prince Borghese from parting with the celebrated grounds that bear his name, there is little prospect of the opposition being successful. The grounds have always been closed on certain days of the week; so it is impossible to assert they are in any way public property, nor is there much likelihood that the attempt to dispute the Prince's title, on the plea that Paul V. had no right to bestow the property on his family, rests on any solid foundation. The Villa Borghese is doomed, and such losses bring out one of the weakest points of the *Piano regolatore*, for its authors, thinking that the Villa Ludovisi and the Villa Borghese would remain as they were for all time, made little provision for public recreation grounds, and, as a consequence, Rome will be worse provided with parks and gardens, in a year or two, than any other European capital.

These large building speculations are mainly supported by the Roman banks, and there can be no doubt that they are being carried too far, and that eventually there will be a reaction involving the ruin of many of those who are now pushing land up to extravagant prices; but before that comes Rome will have been transformed into a large modern city. For the moment, antiquaries are revelling in the discoveries which the constant digging for the foundations of new houses and streets brings to light. For instance, in pulling down the Villa Casale the other day to make room for a huge military hospital, to be erected in separate pavilions according to the most approved modern ideas, the workmen came on a substruction wall consisting entirely of statues, one of which (a female figure in basalt) promises, when all the fragments are recovered, to be a fine work of art. Such finds are perpetually being made, and never were Roman archæologists so busy. At the same time the destruction of historical monuments is proceeding at a fearful pace. There is a law of the Popes on the subject which is exceedingly stringent, indeed too stringent, and it has been recognized as valid by the Italian Government; but at the same time large discretionary power has been given to the judges, and when the Inspector of Antiquities appeals to the court, it frequently declines to enforce so severe a law. Houses of historical interest are steadily being demolished to make way for structures better suited to modern uses. The other day the vineyard in which the tomb of the Scipios is situated was sold for building land at four francs a metre. Luckily the city interfered, and managed to redeem the tomb from the speculator who had bought it.

Another thing, too, is becoming very clear: before long many new thoroughfares must be driven through the Rome of the Popes. It had preserved till lately very much the aspect it had two centuries ago; but the daily increasing traffic chokes its narrow streets, most of which have no sidewalks, and which were never intended to accommodate the carts and carriages that now throng them. Through those which are most frequented it is difficult to drive and dangerous to walk, and every year the difficulty and danger grow greater. The construction of new streets has become a necessity, but such a change will destroy the peculiar character of the old city, and make Rome as commonplace and modern as Paris or Berlin. Every visitor who has an eye for the picturesque will regret the transformation, but it may be doubted whether most Italians will not approve of it. Nothing annoys them more than the knowledge that foreigners generally regard Italy as a sort of museum, full of relics of a glorious past, of which the present inhabitants are simply the *custodi*; and since the national unity was achieved, the Italians have altogether declined the humble rôle assigned to them. They have a natural longing to see their country hold a leading place in Europe—a longing all the keener because they are well aware that their performances at Custozza and Lissa did not raise them in the estimation of other nations. They would like their visitors to pay less attention to the remains of ancient Rome and the artists of the Cinquecento, and more attention to Italy united under the House of Savoy. They wish Rome to be regarded as one of the great centres of modern life, and they would be glad to see their visitors less eager to go to the galleries of the Vatican and fonder of resorting to Monte Citorio. More than one Italian has remarked to me that it is a pity I should have come here at a time when the Parliament is not sitting and the court is at Monza. I have been amused, too, on reading 'La Conquista di Roma,' the last novel of Matilde Serao (a very clever woman who has suddenly risen from being a clerk in the telegraph service to the rank of a popular writer of fiction), to find that she makes an attempt to extol modern Rome in the same rhapsodical strain in which Frenchmen write of Paris. Here I think she strikes a note that will meet with a wide response among her countrymen; and as their idea of a great capital is derived from the boulevards, they are, I think, inclined to look upon the city of the Popes, with its winding lanes and small piazzas, as somewhat mean and provincial, and they will welcome wide streets, big shops, and broad sidewalks. The modern Italian is possessed of many virtues, but he has no eye for the picturesque and little real veneration for what is old. Otherwise he would not be bent on erecting on the Capitol, as a monument to Victor Emanuel, a huge, pretentious structure, which will ruin the effect of Michael Angelo's buildings, and involve the destruction of the interesting and historic house of Pietro da Cortona.

One remarkable feature of the present building operations here is the number of monasteries, convents, and schools directed by ecclesiastics, which are rising in all directions. When the bill for the dissolution of the Monastic Orders was passed, the Italian Government flattered itself that monks would speedily disappear; but it was found, when the monastic buildings were offered for sale, that in several instances they were purchased for a trifling sum by friends of the Church, and the dispossessed inhabitants returned to their old homes to be supported by the pensions awarded to them by the Government. In Rome this did not occur, but after the lapse of some years the monks seem to have collected funds enough to build themselves new habitations, and the Government has no means of interfering with them. An attempt was indeed made, for a short time, to prevent the wearing of the monastic dress, but it was felt that such a measure was hardly consonant with the programme of "A Free Church in a Free State," and it was abandoned. The Franciscans, who are at last to be turned out of Ara Cœli to make room for Victor Emanuel, are building a huge structure, opposite St. John Lateran, which will surprise those who think the day of the Monastic Orders is at an end. Probably the regular clergy will be all the better liked because their privileges have been abolished. There was one custom at Rome which made them highly unpopular. A father would bequeath to his son a house bringing in, say, the annual rental of $1,000, and, at the instigation of his confessor, he would burden it with an annual payment of a hundred dollars to some religious house. This was treated as a first charge on the property, and had to be met quarterly whether the house was let or not. Moreover, the owner was unable to make the smallest alterations without obtaining previously the sanction of the ecclesiastical authorities, the plea being that he might diminish the value of the property. No wonder such abuses made the monastic orders disliked in Rome.

Italy is essentially a Catholic country; and though some of the orators of the Extreme Left,

in imitation of their French allies, are fond of denouncing the priests, the clergy are not unpopular, and, owing to the prudent policy of Leo XIII., the quarrel between the Church and the State is pretty nearly healed outside Rome. Even here cardinals and other high ecclesiastics are to be met with at the receptions of the ambassadors accredited to the Quirinal—a thing for which they would have been excommunicated by Pio Nono. As to the question of the temporal power, it is difficult to see that either King or Pope can yield. No doubt the Vatican would gladly accept far less favorable terms than Cavour offered in 1860, and Leo XIII. must bitterly regret that they were rejected. Indeed, it is said that the name most detested at the Vatican, of all who have had to do with Italian politics of the last forty years, is not Victor Emanuel, not Cavour, not Mazzini, not Garibaldi, but Antonelli. N.

Correspondence.

THE PHILADELPHIA POSTMASTERSHIP.

To the Editor of The Nation:

Sir: The official axe has fallen, and has made at last a nearly clean sweep of the heads of Federal offices in Philadelphia. Scarcely any remain of the immediate representatives in this city of the executive departments whose appointments antedated the inauguration of President Cleveland. Had the removals been confined to cases of inefficiency or of active partisanship, no fair-minded person could have complained. One, at least, of the officers last removed has, however, by the high efficiency of his office, by his abstinence from active participation in politics, and his loyal observance of the civil-service law, alike under a Republican and Democratic Administration, come throughout this community to be thought a model of what a civil servant ought to be under the reformed system. Thus it happens that the course of the Administration in regard to the Post-office has been tacitly expected by friend and foe as a test of the sincerity of its reforming purposes, so that it is not now too much too assert that in the dismissal of Mr. Huidekoper the Administration has dealt the severest blow it could at the cause of that reform here.

There has long been a large body of Republicans here who have thought that, in local affairs at least, the character and capacity of aspirants for office are more important than the name of the party in whose garb they may choose to masquerade, and their votes have decided many a hotly contested election. Many of the most earnest of these find their faith in the possibility of reform under Democratic auspices rudely shaken by this conspicuous example of the failure of merit to secure even the tenure of an unexpired term of office under Democratic rule. And yet more strongly will they be driven from any association with Democracy should further threatened changes occur.

I believe that all of us who supported Mr. Cleveland feel alike in this matter, and grieve that he has been so misled, while in this we would not wish to impugn his motives or embarrass him by petulant criticism, nor yet to insinuate that the new appointment of Postmaster would not have been a proper one had the vacancy occurred in a proper manner.

It has been stated that these changes have all been due to the influence of Mr. Randall. If so, I doubt his being a willing agent. Mr. Randall is not one of the narrow politicians who need the control of spoils to obtain a prestige which would otherwise be denied to their lack of statesmanship. And if it be true, as reported, that he finds the pressure of office-seekers well-nigh unbearable, let him take steps to free himself from it forever by obtaining the enactment of such measures as shall effectively prevent members of Congress from serving as brokers of offices.—Respectfully,

Stuart Wood.

Philadelphia, November 23, 1885.

PHILADELPHIA AND PROTECTION.

To the Editor of The Nation:

Sir: It is very good of the *Nation* to spare so much space to Philadelphia and its "impressive lesson in political economy." A free-trader myself, I am afraid that zeal for the cause has in this case exceeded your discretion. The reasons for the comparative slowness in Philadelphia's progress—and I am sure that a realizing sense of this will bring its cure—are so obvious that disputed tenets in political economy need not be urged. Indeed, if your contributor could but leave his statistics and his theory, to spend a single day in our streets, he would, I think, admit that proximity to New York is by far our most annoying trouble.

Philadelphia is ready enough with "impressive lessons." She teaches this country a conservative spirit; simple, unobtrusive habits of life; a regard for fair dealing founded on moral obligations, and *not* on legal considerations. But perhaps these are not essential to the *Nation's* conception of political economy. Of course we are "provincial," for our business "methods" are not "modern" in the Grant & Ward sense, nor did our banks flinch in last year's squeeze. Even in our municipal government—which *is* shameful—you must allow that, at best, we can but grope darkly, with neither a Tammany Hall, nor a County Democracy, nor "the metropolitan press" to guide us.

However, it is ungracious to discuss one's friends, and I only write to chronicle my regret that for once your zeal as a propagandist has misled you; and my belief that protection is only a minor evil in this city of ours.—I am, yours, etc.,

C. B. Newbold.

Philadelphia, Pa., November 28, 1885.

To the Editor of The Nation:

Sir: In your comments on Philadelphia in the current number of the *Nation* you omit to state why the city has been politically misgoverned for many years, notwithstanding the recognized ability of its leading men and the participation in public life of "native-born" citizens. You allude to the tariff, but fail to make the application, which is, simply, that the manufacturers fear the accession of a Democratic Administration to power and the probable reduction of the tariff. They would rather see a Republican thief in high office, and the revenues of the municipality wasted, than an honest Democrat whose election might have a remote influence on the tariff question. This has been proved a score of times within the past few years, and no one knows it better than the *Press*, though it is doubtful if it will make the acknowledgment. A Life-long Republican.

Philadelphia, November 28, 1885.

"STUDENTS' HOUSE OF COMMONS."

To the Editor of The Nation:

Sir: In your last issue Mr. Langdon Williams gives an account of a successful method adopted for rejuvenating the Hopkins Literary Society. In times past great difficulty has been experienced in getting the students together for this and kindred purposes, mainly from the fact that they are scattered throughout the city, and do not find conventional debates sufficiently alluring to entice them from their homes. In addition, the various courses of study prescribed by the University leaves but little time to read up the many abstruse questions submitted for discussion. For the same reasons, it has been found almost impossible to place secret societies on a firm basis, the social attractions of the outer world rendering such organizations superfluous. Under these circumstances, the establishment of a mimic Lower House, where all the forms and ceremonials are gone through with, and embryo Gladstones and Parnells "move the previous question," was a very happy thought.

But would it not have been better to model it on our own House of Representatives—a body assuredly in no wise inferior to the British House of Commons in dignity, ability, or influence? Apart from an interest in home institutions thus fostered, it would familiarize our future statesmen with the forms of procedure practised in Congress, and prove of incalculable benefit to them in after life. The Johns Hopkins University has never, hitherto, been accused of Anglomania. It is preëminently *sui generis*—a little Germanic in its predilections, if you like, but liberal and catholic withal. This broadness, however, should not be carried to the extent of developing Parliamentarians at the expense of Congressmen; for although the matter discussed may, as your correspondent says, make "good citizens and intelligent voters," the manner of consideration is not in consonance with American institutions. J. H. U., '83.

Baltimore, November 30, 1885.

To the Editor of The Nation:

Sir: My attention has just been attracted by a communication in your edition of November 26, bringing to public notice the value of a society in our colleges which combines both literary and political instruction. Allow me to mention another instance of the same character. Several years ago a deliberative assembly of this kind was established by the Faculty of Union College, in your own State, at the suggestion of one of her alumni, William H. Seward, who saw the value to young men of a training such as an assembly of this kind imparts. The model, however, was not the House of Commons, but the United States Senate, the assembly becoming known as the "Union College Senate." After a period of inactivity the "Senate" was reëstablished in 1881, the senior class furnishing the Senators, a small committee representing the House of Representatives, and a member of the Faculty presiding as president of the Senate. A pamphlet containing "Senate Rules," to be used in addition to the usual works on parliamentary law, was printed, committees were appointed, bills were introduced and debated, and all the workings of Congressional machinery illustrated as well as possible.

It is needless to enter into details, but in closing allow me to give my testimony in favor of assemblies of this nature, and to express the hope that more of our institutions of learning will encourage the formation of such assemblies, which enable a young man to better understand the workings of his own Government, which tend to make him a better citizen, and, if circumstances so order, a better public official.—Yours respectfully, Condé Hamlin.

Beaver Dam, Wis.

AN ABSURD SOLECISM.

To the Editor of The Nation:

Sir: Our modern novelists are trying to escape the uniform use of "said," "answered," "remarked," etc., by using intransitive verbs in an active sense, with a clause in quotation marks as object, or by a still more awkward device. I note several examples from a single writer of some reputation in the *Century*, November, 1885: "'If I look comfortable, my looks belie me,' he *sighed*," p. 62. "'What business had he with the

records?' Mr. Newbold *interrupted*," p. 69. "'I knew you would say that,' *laughed* Mrs. Craig," p. 70. So it goes, through all our latest stories; "'I am tired of this,' *yawned* Tom." "'Get out of my sight,' *frowned* Dick." "'Sheer cant,' *scoffed* Harry." In sensational novels, these absurdities appear on every page, and they are becoming very common in more respectable authors. This goes far to verify Addison's remark: "There is scarce a solecism in writing which the best author is not guilty of."

WOLCOTT CALKINS.

NEWTON, MASS., November 29, 1885.

Notes.

WILLIAM S. GOTTSBERGER will be the American publisher of 'The Ebers Gallery,' a collection of twenty photographs after paintings by Alma-Tadema and other European artists, with descriptive letter-press. The edition is limited to 200 copies for this year.

William R. Jenkins will add to his "Romans Choisis" a novel by Daniel Lesueur, 'Le Mariage de Gabrielle'; and he will have the American edition of Alphonse Daudet's 'Tartarin sur les Alpes,' illustrated with aquarelles in the text after the manner of the 'Gulliver' which we noticed last week.

Cassell & Co. will have ready before the holidays Mr. S. R. Koehler's historical and technical work on 'Etching,' illustrated with 125 examples.

Ginn, Heath & Co. announce 'The Leading Facts of English History,' by D. H. Montgomery; 'Mediæval and Modern History,' by Prof. P. V. N. Myers; and Ruskin's 'King of the Golden River,' illustrated.

The Austrian traveller, Ernst von Hesse-Wartegg, has just issued a second edition of his 'Nord Amerika: seine Städte und Naturwunder, etc.' (Leipzig: G. Weigel). It has been enlarged by observations made during the author's journey in 1883-84 through the Atlantic Coast and Gulf States.

Mr. Ernest C. Thomas, one of the ablest of English librarians, is preparing an edition of the 'Philobiblion' of Richard de Bury, Bishop of Durham and sometime Chancellor of Edward III. Besides editing the Latin text and translating it into English, Mr. Thomas will prepare an introduction giving some new facts as to De Bury, and he will add also a bibliographical account of the book. The text of all existing editions is very corrupt, and Mr. Thomas has been enabled to examine the best MS. and to restore the just reading in nearly a thousand places. His edition will be printed on hand-made paper, in crown octavo.

The English edition of Mr. Austin Dobson's 'At the Sign of the Lyre' (New York: Scribner & Welford) has a frontispiece by Mr. E. A. Abbey and a tail-piece by Mr. Alfred Parsons; and to these artist friends it is dedicated. It is a beautiful specimen of the bookmaker's art, revealing on every page the careful oversight of the anxious author. The lover of Mr. Dobson's work may be reminded that the two volumes of his poems, 'Old World Idylls' and 'At the Sign of the Lyre,' and his annotated edition of the 'Vicar of Wakefield,' and his charming selection of 'Eighteenth Century Essays,' may now be had in uniform size and binding; they make as pretty a set of little books as can easily be found.

One of the few private presses from which we get a slow but steady stream of beautifully made books is that of the Rev. H. Daniel of Worcester College, Oxford; to him we owe the 'Prometheus' of Mr. Bridges, and the lovely 'Rachel's Garland.' The latest issue is 'Love's Graduate,' a comedy by John Webster. Ten years ago Mr. Edmund Gosse declared that from a certain unfortunately named play written by John Webster and William Rowley, the share of the former poet was separable. His opinion was sustained by Mr. Swinburne, Mr. Saintsbury, and other students of the English literature of two centuries ago. Now Mr. Spring-Rice has cut out of the joint play all that Mr. Gosse declared to be Webster's sole work, and Mr. Daniel has printed it, and Mr. Gosse has written a preface for it, in which he explains his conjecture and fortifies it by authorities. He maintains that the serious part of the collaborated play is Webster's, and that the very low and vulgar comic portion is Rowley's, and he gives reasons for the faith that is in him. At all events, 'Love's Graduate' is a simple, coherent, and self-contained play, seemingly all by one hand, and Mr. Daniel has made a very pretty book.

The Secretary of the English Spelling Reform Association, 6 Hanway Street, London, W. C., is sending out some very practical "Queries in Orthoepy," intended to elicit data for a phonetic orthography fulfilling the general principles of that Association. These principles are designed to insure uniformity of the symbol for a given sound, and of sound for the symbol. Let us take No. 3 as an example of the queries: "*Half laugh after laughter:* (a) Do you pronounce all these with the same accented vowel-sound? (b) If not, with what differences?"

The *East Anglian* is the revival, the present year, of an old periodical; it is now published as a thin monthly, at Ipswich (Suffolk), being edited by Rev. C. H. Evelyn White of that town. The subscription price is five shillings. When it is considered how large an emigration there was from the East Anglian counties in the early settlement of New England, it will be readily seen how convenient a means such a periodical as this may be made for tracing American genealogies. In the November number, for example, there is a query in regard to the Rev. John Allin, the first minister of Dedham, Massachusetts, who is stated in Leslie Stephen's biographical dictionary to have been settled as a clergyman in Ipswich before his migration—a fact of which his American biographers are uncertain. Much of the matter is, of course, of mere local interest; but there are many articles and bits of information which will be of value to the historical student.

'Poetic Thoughts, with Pictures' (Philadelphia: J. B. Lippincott Co.) is a collection of very well-executed photogravures after very ordinary paintings by members of the Artists' Fund Society of Philadelphia, illustrating (or illustrated by) scraps of verse from various authors. The best of the decidedly uninteresting collection is "At the Church Gate," by Frederick James, of which a sort of broker's clerk is the hero, and the poorest is "A Memory of the Mammoth Cave," by C. P. Weber, than which it would be difficult to imagine anything worse. The verse is not particularly well-selected, and the cover is in abominably bad taste. In fact, the only really good thing about the book is the mechanical execution, which is much better than the quality of the contents deserved.

'The German English Puzzle Primer' is a pamphlet of sixty-four pages, by Miss Mary J. Taber, published at New Bedford. The plan is to group together, in a column, German words which present the same phonetic change, the pupil being expected to write in a parallel (blank) column the corresponding English word. Thus, to take page 27 at random, we find *Biber, eben, Fieber, geben*, etc., the word *Beaver* being printed opposite the first as a guide. We should think it would be very helpful to a teacher.

Two recent French announcements are of interest to Americans—one from its authorship and the other from its subject. The first is 'Ghiberti et son École,' by M. Charles C. Perkins, the latest issue in the "Bibliothèque Internationale de l'Art"; and the other is 'Cent Ans de République aux États-Unis,' by the Duc de Noailles.

Of interest likewise is M. Ferdinand Hue's 'Le Pétrole: son histoire, ses origines, son exploitation dans tous les pays du monde' (Paris: Lecène et Oudin; New York: Christern). Chapter 2 is devoted to the United States, but nearly as many sections are devoted to the oil fields of the Caucasus—and rightfully. We remark in this brochure what professes to be a complete bibliography of all works relating to petroleum.

The quarterly bulletin of the Librairie des Bibliophiles announces in the "Grandes Publications Artistiques" M. Stapfer's translation of 'Faust,' with illustrations by M. J. P. Laurens engraved by Champollion, and uniform with the Leloir-Flameng 'Molière' and the La Fontaine's 'Fables,' illustrated by twelve artists. The 'Fables' are to appear again as the twenty-ninth issue of the "Petite Bibliothèque Artistique," in two volumes, with illustrations by M. Émile Adan, etched by M. le Rat, uniform, of course, with the 'Contes' as illustrated by M. É. de Beaumont. In the fine "Bibliothèque Artistique Moderne," in which M. Daudet's 'Contes,' About's 'Roi des Montagnes,' Gautier's 'Capitaine Fracasse,' Zola's 'Page d'Amour,' and Alfred de Vigny's 'Servitude et Grandeur Militaires' have already appeared, the novelty is to be Lamartine's 'Jocelyn,' with illustrations by M. Besnard, etched by M. de Los Rios. All three of the new books are promised before the new year. The success of these most artistic series of M. Jouaust's has stimulated imitators in Paris, but no rival has given the care and skill evident on every page of all the books of the Librairie des Bibliophiles. Outside of Paris, so far as we know, no publisher has dared to venture on the same ground.

The books of the various series we have named above are all elaborate works of art, worthy of a place on the shelves of the most fastidious lover of books. But M. Jouaust has not been forgetful of the claims of the humbler student. For these he is publishing his cheap and excellent "Nouvelle Bibliothèque Classique," at three francs a volume in a paper cover, and at four francs if you prefer a neat cloth case. In course of time this series is to include all the masterpieces of French literature. It gives a standard text, a few needful notes, an introduction by an authority on the author, a clean page, and a handy form. It is far better than the ordinary Charpentier or Garnier edition of the French classics most often sold in this country. The latest issues are the four volumes of Rabelais with a preface by the late Paul Lacroix. M. George Monval, the editor of the *Molièriste*, is responsible for the 'Molière,' M. Victor Fournel for the 'Racine' and Corneille, M. d'Heylli for the 'Régnard,' M. Sarcey for the 'Marivaux' and for the 'Paul Louis Courier,' the prefaces to which show his skill as a dramatic critic and as a political polemist.

The selections of Mr. Saintsbury from Sainte-Beuve's critical essays is a welcome volume ('Sainte-Beuve: Causeries du Lundi.' Oxford: Clarendon Press). Almost the only fault to be found with it is that it is too small. If some of the extracts had been longer, a better idea of the author would have been conveyed. From a French point of view, it might also be urged that the selection is not sufficiently characteristic of the very versatile, shifting, and almost intangible nature of Sainte-Beuve's appreciations of his contemporaries. But as a choice of specimens showing the growth of Sainte-Beuve's style and manner, from his first attempts in *Le Globe* to his last elaborate *Lundis*, Mr. Saintsbury's little book is very good. The notes and the introduction are excellent.

The seventh volume of Quantin's edition of

Flaubert's Complete Works contains 'Bouvard et Pécuchet,' and is prefaced by an 'Étude sur Gustave Flaubert' by M. Guy de Maupassant, not new, and not what it should be; in fact, deplorably otherwise. His conception of Flaubert was very erroneous. As for this work of Flaubert himself, it may be said that a book which no one in the world but its author could have written or would have wished to write, will never have many readers. Those who do read it will find it a great mass of learning and reflection, shaped into a bitter burlesque. It is a caricature of the bêtises of humanity, a travesty of Thought in its various modifications. In the 'Tentation de Saint-Antoine' Flaubert summons before us the awful ghosts of beliefs which of old beguiled the souls of men; here he makes us laugh at grotesque shadows of the knowledge which today we fancy to be power. It is a colossal *jeu d'esprit*, of which each page—with few exceptions—is amusing, while as a whole it is unspeakably wearisome, utterly dreary. Such jests cause sadness when uttered by wisdom in a fool's garb. The motto of the book might be taken from one of Flaubert's letters: "Nous crevons par la blague, par l'ignorance, par l'outrecuidance, par le mépris de la grandeur, par l'amour de la banalité et le bavardage imbécile." The only valuable parts of M. de Maupassant's essay are the pages where he gives us a portion of the *pièces justificatives* ("a mountain of notes," he says) which Flaubert had arranged and was arranging at the time of his death, as suggestions for this (unfinished) work, and as witnesses of its essential veracity. It is a "dossier des sottises cueillies chez les grands hommes." The extracts range from Descartes to De Maistre, from Bossuet and Fénelon to Dupanloup; from Pio Nono to Louis Napoléon; and Bernardin de Saint-Pierre, Lamartine, Chateaubriand, Montesquieu, Villemain, Jules Janin, Dumas fils, Corneille, Lessing, Condillac, and many others are brought under contribution. It is extremely instructive.

The Rome that is disappearing ("Roma che se ne va"), as related by our correspondent on another page, is one of the subjects treated pictorially in our wide-awake contemporary, *L'Illustrazione Italiana* for November 8. Another engraving in the same line shows the Ponte Rotto of the Tiber, and the works now in progress which will end in its modification, while still sparing what remains of the first stone bridge constructed in Rome. Bulgarian affairs also receive attention in this number, and we have a view of Philippopolis, on its extraordinary rocky site; a portrait group of the three chiefs of the movement for Bulgarian unity; and a likeness of Doctor Stranski.

—There might seem at first blush to be something of unwise audacity in questioning the value of criticisms on George Eliot, concerning some pages of which she herself said that they seemed to her "more penetrating and finely felt than almost anything I have read in the way of printed comment on my own writing"; but we can scarcely believe that the little volume entitled 'The Ethics of George Eliot's Works'—a reprint from the English, with a poor American introduction (Philadelphia: George H. Buchanan & Co.)—will win such praise from a wide circle of readers. It is written by a Mr. Brown—John Crombie Brown—and is a posthumous publication. Its intellectual force is of such degree as utters itself in expressions like these, dictated only five days before the author's death. Speaking of Grandcourt as a type of concentrated selfishness, he says: "We dare not despise him, we cannot loathe him; we stand bowed and awe-stricken before him." The moral force of the author is of a somewhat higher quality; but it, too, is "bowed and awe-stricken" in nature. It tends toward the worship of Pain, the adoration of Suffering and Sorrow, the enthusiasm of Self-sacrifice; and to those who hold that "la joie de l'esprit en marque la force," and who like wise believe that George Eliot will live immortal as a *dramatist* long after her *ethics* have crumbled to the dust, the form and formulas of this book are rather meaningless, while yet the evidently most sincere goodness of the writer cannot but win sympathy. It may be observed, in conclusion, that the only one of Mr. Brown's comments referred to expressly by George Eliot, and which she thought showed "keen perception," is concerned with a distinctly dramatic—only in the vaguest way ethical—situation. Another still smaller, and in every sense a most insignificant volume about George Eliot, a so-called "psychological study" of 'George Eliot's Love-Life' (Cupples, Upham & Co.), is best dismissed as quickly as possible by saying unhesitatingly that it is an entirely worthless production. There is not a word in it that it could be of the slightest use to any one to read. Its folly is only equalled by the grossness of its impertinence regarding the dead and also the living.

—Mr. E. D. Neill's 'Virginia Vetusta,' though issued within the current year, is already out of print—a hopeful sign for the future of American history. The volume is one in which no one will read many pages who is not heartily in search of the earliest and most reliable witnesses concerning Virginia in its primitive period. Made up in part of "letters and documents never before printed," and of others entombed in widely severed libraries, or printed only in books so rare that no two of them can be reached in a day's journey, they form a compilation for which every historical investigator will give thanks. There are few of the two hundred pages which do not throw side-lights on the Old Dominion in its cradle. Scraps picked from the wormholes of long vanished days sometimes solve, and sometimes stir up, doubts regarding Captain John Smith, or his relations to Pocahontas, or her relations to John Rolfe, or concerning the introduction of negro slaves, or the blue blood of the first Virginians. Mr. Neill shows that the London Virginia Company professed to be before all things a missionary enterprise. They begin one of their first reports by speaking of "the eyes of all Europe looking upon our endeavors to spread the gospel among the heathen people of Virginia"—"an enterprise tending so greatly to the enlargement of the Christian religion." Mr. Neill prints a facsimile of the title-page of the first work on Virginia, which was a sermon "on planting, among the savage Virginians, not only humanity but religion." More than all this, the gifts of money within the first dozen years after the founding of Jamestown rebuke the conceit of our humanitarians who fancy themselves the first benefactors of our aborigines. In 1618 Mary Robinson, a widow, gave £200 in aid of the Virginia Indian mission. There were also gifts of £70, £100, £300, and £500, the last contributed anonymously. These donations, the purchasing power of which was ten times greater than today, were prompted by an appeal of King James for "propagating the Gospell amongst Infidells, and educating the children of those barbarians." In his anxiety to send an antidote with the bane, the monarch rivalled the Boston merchant who, when he had filled the hold of his ship with rum, was always ready to give a missionary free passage in the cabin.

— Women play such an important part in literature nowadays that it becomes an interesting question how they should write their names when single and when married. Of course, no woman who has sufficient individuality to write anything is willing to merge her existence in that of her husband. Mrs. William Armstrong may consent to appear in that guise on her visiting cards, but when she writes a magazine article she will choose to be known by her own name of Grace Woodbury Armstrong, if she has been known to her audience before marriage as Grace Woodbury. Supposing, however, that her parents have given her a middle name of Philpot, and that she has been in the habit of signing herself Grace Philpot Woodbury. She cannot now become Grace Philpot Woodbury Armstrong—no table of contents could afford her room for that—and there is danger that her former admirers may not recognize her under the name of Grace Woodbury Armstrong. In view of such a contingency, therefore, it would be well if unmarried women would content themselves with a single surname. Two names are usually sufficient to distinguish a person, and provision would thus be made for the possible addition of a third name later in life. Helen Hunt will not have lost her identity in Helen Hunt Jackson, nor Harriet Prescott in Harriet Prescott Spofford, nor Elizabeth Robins in Elizabeth Robins Pennell, nor Alice Wellington in Alice Wellington Rollins. In time the possession of three names might come to have all the significance of mistress, unless, indeed, women who are in literature should come to discard altogether the custom of attaching their husband's patronymic to their own.

—The well-known Chinese traveller, Archibald R. Colquhoun, has written for the London *Graphic* an account of "The Crisis in Burma," the first part of which appeared in the number for October 31. In this he treats wholly of Upper or Independent Burmah, the country, its institutions, and inhabitants. He estimates the extent of the territory over which the King actually rules to be about 67,000 square miles. This was once densely populated, the numerous and vast ruins proving the till recently uncredited statements of Mendez Pinto on this point. The present population may be possibly about two millions, but it is being rapidly and constantly decreased by emigration, notwithstanding every effort on the part of the Government to prevent it. These emigrants, of whom nearly 500,000 have recently come into British Burmah alone, are, "as a rule, only single men, with no families or near relatives to leave as hostages." This is caused partly from the fact that the recognized claim of the King to the service of every adult is carried to such an intolerable extent that "no man can call time or labor his own"; and partly to the crushing burden of taxation and the brutal oppression of the unsalaried officials, which in some places has put a stop to all open trade. The land also belongs to the King, but is free to any one who wishes to occupy it, provided he encloses and cultivates it. The natives have an attractive manner, and are without caste prejudices; and as "nearly every adult male has passed through a monastery, it comes about that a Burman who cannot at least write his own name is very seldom met with." The condition of the women is better, probably, than in any other Eastern country. They are free to marry whom they choose, go in public unveiled, transact business freely, and are rarely immoral. The people are comparatively industrious, and pauperism is unknown among them. Agriculture is their chief pursuit, though they have a few manufactures, as, "silk and cotton weaving, lacquer ware, gold and silver work, carving, pottery, and iron work." The internal trade is mostly in the hands of "Bombay merchants, Parsees, and Chinese, not a single Englishman being established at Mandalay." The Government is vested by the King, who is absolute, in a council of four or six members, presided over by the Crown Prince or some other prince appointed by the

King. In addition to these is an equal number of household ministers, who, though inferior in rank, appear to have greater power. There is no hereditary nobility, any one being able to rise at the King's pleasure to the highest position in the state, and, of course, to be degraded. The army is contemptible in numbers and in equipment. The foreign officers, principally Frenchmen and Italians, formerly maintained for the purpose of drilling the troops, have nearly all left the country.

—The question, Where was the cradle of the Aryan, or Indo-European, division of mankind, to which we belong? has in late years been mooted with greater scientific earnestness than ever before. At the beginning of the century nobody doubted that it was in Asia—perhaps somewhere near the mountains of Armenia, where Scriptural tradition placed the temporary home of postdiluvian mankind. Adelung accepted the Asiatic origin as an axiom. The great lights of comparative Aryan philology and Aryan antiquities, Bopp, Pott, Lassen, shared the belief. Jacob Grimm unhesitatingly asserted that all the nations of Europe immigrated from Asia. Of all Asiatic countries, however, the region anciently known as Bactriana, and now included in Afghan Turkistan, north of the Hindu-Kush, was generally looked upon as the most probable site of the primitive Aryan home. From there the various branches of the great race radiated and migrated—the Iranians and Armenians southwestward; the Vedic tribes southeastward; the Celts, Teutons, Græco-Itali, and Letto-Slavs westward, in various streams. It was about the beginning of the second half of the present century that the first dissenting view was promulgated by the British ethnologist, Doctor Latham, in his edition of Tacitus's 'Germania.' He defended and expanded it later in his 'Elements of Comparative Philology' (1862) and other writings. According to Latham, the original home of the Aryans was to be sought in Europe. This theory was first received as a heresy, but it gradually found adherents, and in 1868 no less an authority than Theodor Benfey gave it support and prestige. Lazarus Geiger made it popular by his brilliant dissertations on linguistic and ethnic evolution, and Friedrich Müller, Spiegel, Cuno, and other philologists, and, in the field of more strictly scientific anthropology, Pösche, Ecker, and Lindenschmitt, more or less positively declared in its favor. The discussions on the subject became frequent and animated, the defenders of the old view mustering in large numbers and opposing authority to authority—among others, Professor Roth, of Tübingen, to Benfey.

—A few years back, the greater weight of opinion, part of it traditional, seemed still to be on the side of the old view, and the latter was generally reflected in popular books, historical and other. The European theory was often completely ignored, even by scholars, as, for example, by M. Van der Gheyn, who repeatedly lectured on the origin of the Aryans before the Royal Geographical Society of Antwerp. His latest lecture, however, 'L'Origine européenne des Aryas' (Antwerp, 1885), shows the great change which has taken place quite recently. He still contends for the old theory, for Asia and Bactriana; but his argument is completely defensive. In fact, after stating, in a candid and instructive manner, the main points of the latest expounders of Latham's theory, and rebutting them singly by reasonings and proofs far from decisive, he concludes in a rather sceptical tone. The writings which have thrown him upon the defensive, excepting Pösche's 'Die Arier; ein Beitrag zur historischen Anthropologie' (1878), are all publications of the year 1883: 'Sprachvergleichung und Urgeschichte,' by Prof. Otto Schrader, of Jena; 'Origines Ariacæ,' by Professor Penka, of Vienna; a treatise by Franz von Löher, published by the Royal Academy of Munich; and articles in *Ausland*, by Professor Tomaschek, of Gratz. Schrader and Von Löher combat the Asiatic theory, but have no positive opinion concerning a European substitute for Bactriana; Tomaschek finds the original home of the Aryans in Eastern Europe; Pösche locates it near the sources of the Dnieper, in Western Russia; Penka, in Scandinavia, where both the present dwellers and the oldest skulls show the Aryan race in its purest type. The arguments of Schrader and Penka appeared so convincing to Professor Sayce, who reviewed their works in the *Academy*, that he abruptly discarded his former opinion to the contrary, and declared, somewhat vaguely, for "the districts in the neighborhood of the Baltic," to which neither Pösche nor Penka need object. The Scandinavian theory has since been further elaborated by Dr. Ludwig Wilser, in 'Die Herkunft der Deutschen: Neue Forschungen über Urgeschichte, Abstammung und Verwandtschaftsverhältnisse unseres Volkes' (Carlsruhe, 1885). This learned and comprehensive monograph makes the prehistoric abode of the Goths in Sweden and on the North German shores the centre of the primitive Aryans, from the periphery of which Germanic tribes, Celts, Latins, Rhæto-Etruscans, Greeks, Slavs, Lithuanians, Iranians, the invaders of India, and others gradually detached themselves, migrating mostly southward and eastward. It is probably the most brilliant production on either side of the question.

—The Clarendon Press has just offered us, from the pen of the well-known Anglicist and phonetist, Henry Sweet, an entirely novel form of grammatical text-book: 'Elementarbuch des gesprochenen Englisch (Grammatik, Texte, und Glossar).' The book is intended for the use of Germans in learning English, and the aim is to acquaint the learner directly with the language as it is actually spoken, leaving the difficulties of the artificial literary form, such as the traditional orthography and the elaborate syntax, to his later study. The English is represented only in the form of a phonetic transcription, the alphabet employed being in the main that already recommended by the author in his 'Handbook of Phonetics,' p. 192, probably the simplest, completest, and most logical of all the systems yet proposed. In the reading exercises, which occupy 40 of the 127 pages of the book, as well as in the grammar, the sentence and not the word is made the unit of calculation. The sentence is represented exactly as it is spoken, regardless of the traditional division into words, and with the various pauses, abbreviations, and combinations of word and sentence-accent which actually occur. The sentence "I wouldn't do it, if I were you" appears, for example, as "*-ai wudnt duwit', if aiwəjuw*," in which the spaces indicate the accentuation of the following syllable. In the grammatical portion, which occupies sixty-four pages, the most novel point is the treatment of the double forms (*Satzdoubletten*), which are developed under the varying conditions of sentence-connection and sentence-accent; *e. g.*, *nt=not* in "I can't," *əm=œm* 'am' in "I am tired," *sn=seint* 'Saint' in "St. Paul's," *tl=til* 'till.' The sections on sentence-accentuation and the accentuation of compounds are also entirely original. In the syntax the discussion of the use of the tenses, especially of the compound forms, is a marvel of correct brevity. The spoken English which constitutes the basis of this work is the dialect of the author himself—*i. e.*, the ordinary conversational language of an educated Londoner. The book will subserve just here an excellent purpose for the American reader as a basis for determining the exact degree of divergence between his own dialect and that of cultivated circles in England. Mr. Sweet transcribes, for example, the words *butter, color, humbug, done, some, us*, with *bətə, calə, hambag, dan, sam, as*, in which the *a* represents his "mid-back-narrow" vowel. Everybody who is acquainted with London English will recognize this as a correct reproduction, although our New England dialect would require the transcription with *ə : bətə, həmbəg*, etc. Whether Mr. Sweet's work will exactly meet the educational needs of those for whom he intended it, may be a question, but it is sure to become an indispensable guide to every teacher of English grammar and orthoepy.

ROPES'S NAPOLEON I.

The First Napoleon: a Sketch, Political and Military, by John Codman Ropes. Boston: Houghton, Mifflin & Co. 12mo, pp. xxiii-347.

No better proof need be given of the perennial interest which attaches to the character of a great man than the fact that the first Napoleon is to-day as fascinating a problem as when the world was freshly dazzled with his achievements. Dean Farrar has made his career the subject of a lecture which he is delivering to American audiences, and the crowds which hang upon the words of the distinguished divine find the evening hour all too short for their enjoyment of the theme. Mr. Ropes's book is the substance of a course of lectures delivered last spring before the Lowell Institute in Boston, and, in the elegant typography of the Riverside Press, makes as attractive a volume as the most fastidious could wish to handle. The Dean's lecture and Mr. Ropes's course of lectures show also that the subject of debate is no less fruitful in differences of opinion than formerly. From the same basis of facts intelligent students get wide asunder in their estimate of Napoleon's character. To one he remains, on the whole, the scourge of the human race; to the other, he seems to deserve a niche in our Pantheon as a world's benefactor.

But whether Mr. Ropes's readers accept his conclusions or follow the views of the Dean, they will all agree that in these seven lectures they have a most compact and convenient outline of Napoleon's career, full of vivid and clear analyses of facts, the freshness of oral address well preserved, and the interest stimulated by the lively and vigorous style, which prevents the narrative from growing dull or wearisome for a moment. Mr. Ropes has also made a point of giving fuller treatment to the military campaigns of the great soldier than can be found in a volume of similar size and compass, and these are illustrated by nine well-engraved maps, which greatly aid in understanding the strategy and the tactics. The author's taste for military studies has led him to a happy enlargement of his work in this direction, and a wide range of authorities has evidently been consulted in reaching his conclusions.

In his treatment of the political side of his subject the author draws ingeniously a distinction between the extension of personal liberty and the extension of political rights; and he insists that Napoleon respected and preserved the personal rights and liberties of the people as they had been achieved by the Revolution, while he denied them only the exercise of political powers which they were incompetent to use. They were thus disciplined for their own good; and in seizing upon supreme power, and even in establishing a despotic empire, Napoleon may be regarded as acting upon motives of public welfare which may be morally approved by Republicans of our American type. Mr. Ropes's admiration for his subject carries him even further. He accepts the Napoleonic theory that the extension of the French Empire, and the seating of

members of his family upon half-a-dozen thrones in Europe (excepting that of Spain), was the justifiable result of aggressive wars begun by the other Powers. He even defends the execution of the Duc d'Enghien, which most writers, even of those friendly to Napoleon, have agreed in considering a crime.

We think the time has gone by when many, even of a popular audience, will follow the author in his more extreme positions, though all will relish the intellectual pleasure of listening to a brilliant forensic debate upon them. The Revolutionary propagandists of France appreciated to their full value the advantages they had in offering to other peoples relief from the grinding weight of feudal burdens and hereditary oppression. Napoleon was far too sharp-sighted to miss the use of such a weapon, and, whether as Jacobin general in his Italian campaign or as the would-be founder of a new dynasty of kings, used it with all the power of his giant arm. When first illusions had been dispelled, however, the question was seen to be one of accepting political servitude as the price of material well-being. Any autocrat, whether Czar or Caliph, may offer that; and if he be an intelligent despot, he will see his advantage in making his paternal government so solicitous for the physical happiness of his people as to make them call him "father" with a more devoted loyalty than Russian *muzhiks* ever showed toward Peter or Alexander. But most of us, in our day, will find the only apt comparison for such happy subjects in Circe's swine. In Napoleon's case, even the material advantages withered when war could no longer be made to support war, and when the conscription, anticipating the age of military duty, dragged even tender boys into the ranks, and threatened a permanent deterioration of the French race by the wholesale destruction of its able-bodied men. Then the demon of ambition was unmasked.

The question of Napoleon's abilities, whether military or political, was never an open one. His tremendous powers were too manifestly displayed. The only question has been as to his character. It is here that his apologists usually substitute the evidence of his wisdom as a despot for proof of moral elevation as a man. The two have no relation to each other. The simplest interpretation of his conduct and motives is the truest. His cynical frankness contradicts his respectable advocates. Even prior to his Italian campaign he boasted to Josephine that by the aid of the sword at his side he would "go so far" that his rivals and his patrons would alike be glad of his protection. When Cobentzel met him to negotiate at Campo Formio, he demanded that the customary simulacrum of the Austrian throne be taken from the room, "car je n'ai jamais vu un siège plus élevé que les autres sans avoir envie aussitôt de m'y placer"; and at the summit of power he himself told this story of his impulse always to take the "high seat" as typical of his career. It would seem impossible to prove anything, in the realm of moral causes, more clearly than he himself has given us the means of proving that the dominant purpose of his life was self-aggrandizement, by whatever means, at whatever cost. To further this he courted in turn the Robespierres, and Barras who helped to overturn them. He thundered from Italy, as simple general, against the moderate reactionists of 1797, and embarrassed the Triumvirate in the Directory by the ostentatious zeal of his support. He made his battalions swear, by the manes of their dead comrades and upon their flags, "guerre implacable aux ennemis de la République et de la Constitution de l'an III." He sent to Paris, to sustain the usurpations of the Directors, General Augereau, whom even Rewbell shrunk from as "ce fier brigand," and who openly declared that his mission was to "kill the royalists," which avowedly included all who were not Jacobins. Yet Augereau lived to be a "noble of the Empire" when his master, having used the oaths to the Constitution of the year III, the Jacobin clubs, and the Directory as the ladder to power, kicked them away, and affected to treat those who were faithful to the Bourbons as traitors to his new royalty.

In regard to putting the Duc d'Enghien to death, Mr. Ropes complains that "Bonaparte is accused of having executed an innocent man merely in order to strike terror into the ranks of his enemies." But in this also Bonaparte is the worst witness for his own case. Mme. de Rémusat describes with thrilling effect the scene when Napoleon avowed the act in the presence of the few intimates of Josephine's court, and in hoarse tones (*d'une voix sèche et rude*) exclaimed: "At least they will now see what I am capable of, and I may hope in future that they will let me alone." He uses almost the very words which Mr. Ropes resents as an injurious accusation. Napoleon was too well used to putting to profit all the resources of the public press, to have any doubt that, if he had any evidence of D'Enghien's complicity in crimes which the world would regard as worthy of death, he would have trumpeted it far and wide. His silence would be almost confession, and he broke the silence to make it quite so. It is well known that Coulaincourt was one of the most honorable of the officers surrounding Napoleon, and that he deeply resented the way in which the Emperor had sought to use him in this affair. Yet we have respectable authority for it, that Coulaincourt, in 1813, when he showed his personal devotion to Napoleon by spurring his horse between him and a burning shell, still said, referring to the D'Enghien affair, "I can't believe there's a God in heaven if that man dies upon the throne."

But as to the general effect of the Napoleonic rule, we are not left to the testimony of any class or faction. Among contemporaries the revolutionist Carnot and the royalist Rémusat are agreed; among recent historians the monarchist Taine and the republican Lanfrey are in harmony. The Empire disciplined the citizen out of all spontaneity or vigor of progress. It substituted for the free movement of the nation the autocratic will of one man, who, as he boasted that he looked after every buckle on his artillery horses, also sought to dictate every idea in the brains of his subjects. The result cannot be better put than in the vivid lines with which Taine closes his 'Revolution.' Everything was made to work, he says,

"toward a unity of result, which was the omnipotence of the State, the omnipresence of the Government, the abolition of everything like local or private initiative, the suppression of all free association, the gradual scattering of all the smaller spontaneous organizations of men, the prevention of all plans involving the labor of generations, the extinction of all sentiments which make the individual live out of himself, either in the past or in the future. Never was a finer *caserne* built!—one more symmetric or with more decorated front. Nothing could be more satisfying to superficial judgment or more acceptable to the vulgar good sense; nothing better adapted to narrow egoism; nothing better 'set up' or more prim, or fitter to discipline and control the meaner and lower qualities of human nature, *but also to starve and spoil all its higher qualities.* In these *philosophic barracks* we have been quartered now these eighty years!"

Mr. Ropes's book is a fair and vigorous contribution to the great debate, the perennial and unceasing debate, over the place and scope of moral principles in public affairs; and though what we have said will indicate that we differ widely from him in our estimate of the moral side of the Napoleonic character, we welcome the earnest and able presentation of opposing views, feeling sure that the reader will be stimulated to a deeper study of the wonderful era of which he treats, and the problems of life and conduct which it presents.

MOMMSEN'S ROMAN HISTORY.

Römische Geschichte. Von Theodor Mommsen. Fünfter Band. Die Provinzen von Cæsar bis Diocletian. Mit zehn Karten von H. Kiepert. Berlin: Weidmannsche Buchhandlung; New York: Westermann. 1885.

Die Oertlichkeit der Varusschlacht. Von Theodor Mommsen. The same publishers. Pp. 64.

THE most important event of the year, in the line of historical literature, is without question the appearance of a new volume of Mommsen's History of Rome. It is more than thirty years since the publication of the original three volumes, bringing the history down to the fall of the Republic; a work which at once took its place at the head of books of its class. Since then we have waited, patiently or impatiently, to see repeated revisions swell the three volumes to much enlarged dimensions, and modify very materially the original aspect of early Roman history; and to see the author apparently leave his work unfinished, to labor in other directions. Immense collections of inscriptions, with exhaustive commentary, an elaborate work on Roman constitutional law (itself incomplete), an edition of the 'Corpus Juris,' and numerous monographs and special treatises, have borne witness that he has never been idle. It was easy to see that all these were directly in the line of preparation for the continuation of his principal work, and that this continuation would be all the better for the years thus spent in preparation. But at the same time it was hard to escape from an uneasy fear that he might spend his life in preparation, and leave his work still a fragment; that he might die before it was ended, or, at least, that we, his readers, might not live to see it completed.

As it is, he has skipped what will generally be considered the most important part of the continuation, and given us a volume which may itself be regarded almost in the light of preparation. The fourth volume, the history of the Empire itself, is yet to come. The volume before us is, it must be admitted, devoted, if not to the most important, to the least known and hitherto most neglected part of Mommsen's subject: no doubt, as far as information is concerned, we have vastly more that is new in these pages than even he could gather together in the well-explored field of Imperial history. In the fourth volume, when it comes, we shall not look so much for new facts as for new points of view, masterly grouping and generalization, an instructive tracing of cause and effect. In this fifth volume the matter itself is new. Previous historians have looked at the history of the Empire too exclusively from the point of view of the imperial city and the central authority. It has been forgotten that, while the Empire was Roman in name, it was a world in fact; that the provinces were as essential a part of it as the city itself; that the edict of Caracalla, extending citizenship to all its inhabitants, was but the recognition in law of what had long existed in point of fact.

This volume, in thirteen chapters, contains a systematic survey of the several parts of the Empire, passing along the north coast of the Mediterranean from west to east, and then the south coast from east to west, ending with the African provinces. In each chapter the province or group of provinces is examined exhaustively—its geography, history, institutions, industry, and religion; a mass of information only brought to light by the collections of inscriptions to which Mommsen has devoted so much of his energy of late years. As a rule the facts are

given without any references to authorities, as is the custom of the author; they are supposed to be accessible in the collections and periodicals of Germany. Notes, however, are not rare, for the fuller explanation of the text, and occasionally for the elaborate discussion of some special topic. On page 111, for example, is a foot-note, containing almost a page of fine type, upon the meaning of the word *limes*—a word designating a military construction often met with, and possessing great importance, in these frontier inquiries.

The part of the work which possesses most interest for general students is probably the chapters upon the northern frontier—the account of the campaigns of Drusus, Tiberius, and Germanicus, with an explanation of the policy of Augustus and Tiberius. Drusus, in his victorious campaigns, had actually brought Germany into subjection as far as the Elbe, and had established it as a province, as completely subdued, to all appearance, as had been the case with several of the older provinces. Germany seemed as certainly a part of the Empire at the Christian era as Spain had been at the end of the Second Punic War; and the wars of Viriathus and Numantia in Spain were no less formidable than the uprising of Arminius. Nevertheless, Augustus had seemed to acquiesce in the loss of this province after the defeat of Varus; and Tiberius, after the three moderately successful campaigns of Germanicus, definitively withdrew the troops, and made the frontier the line of the Rhine. How to explain this policy? The frontier of the Elbe, says Mommsen (p. 51), was in itself a shorter and more defensible line than that of the Rhine and Danube; but it removed the army too far from the recently subdued Gallic provinces. "The Roman people were accustomed to boast that all Gaul was held in subjection by a garrison of 1,200 men at Lyons; but the Government could not forget that the two great armies on the Rhine served not merely to protect against the Germans, but to hold in subjection the Gallic States in their rear." So with Pannonia; the necessity of withdrawing troops from the Danube to send to Germany after the defeat of Varus was followed by an insurrection in Pannonia, which was with difficulty suppressed in four years. The military force was not adequate to the demands made upon it by the enlargement of the boundaries, and the financial condition of the State forbade the increase of the military force. "Neither Augustus nor Tiberius ventured to increase the costs of the army." The policy prescribed in the will of Augustus, *coercendi intra terminos imperii*, rested upon financial rather than military grounds. From this point of view it appears that while the importance of the defeat of Varus has not been exaggerated, it resulted after all in giving the Empire a better boundary line. Perhaps, if it had not been for this disaster, the advanced frontier would have been maintained; once lost, it appeared unwise to attempt to regain it.

Of the points of detail that come under consideration in this history there is perhaps none more interesting than that of the locality of this famous battle. It has usually been placed in the Osning range, southwest of Minden on the Weser. This is, however, an unlikely spot, because the Roman army started from the neighborhood of Minden, and had gone several days' march before it was attacked. In the history Mommsen pronounces the problem unsolvable, for want of data. In a paper, however, read before the Royal Academy of Berlin, and published in pamphlet form, he shows that, while the accounts of the affair are too imperfect to allow any certain conclusion, it is nevertheless possible, with the aid of collateral evidence, to arrive at a very probable theory. The collateral evidence is afforded by the Roman coins found in this region in considerable abundance; and a significant portion of the pamphlet is occupied with the examination of these local collections. The conclusion at which he arrives (p. 46) is, "that the coins found in and about Barenau belong to the army of Varus, which perished in the year 9 in the Venner Moor." Barenau is a little place just to the northeast of Osnabrück—about west of Minden; and the road to it from Minden leads into a swampy, hilly district, containing the head waters of the River Hunte, precisely corresponding to the description of the Teutoburg Forest. It has seemed natural, when some point further west than the Osning was to be sought, to look in the direction of Münster, or as far south as Paderborn, on the ground that this would have been a more direct route to the headquarters of the army upon the Rhine. Mommsen points out, however, that all our calculations are baffled by the consideration that Varus was tempted away from the direct route in order to suppress a revolt; and whether he went north or south there is no means of knowing except through some such evidence as this. The character of the coins in the Barenau collection, being chiefly of the later years of Augustus, is a piece of strong circumstantial evidence. He thinks that Varus, finding himself entrapped, attempted to retrace his steps towards the Weser, and that consequently Germanicus, when he visited the battle-ground a few years later, approaching from the Ems, came upon Varus's line of march in the order followed by that commander himself during his retreat.

RECENT NOVELS.

A Mission Flower: An American Novel. By George H. Picard. White, Stokes & Allen.

Without a Compass. By Frederick B. Van Vorst. D. Appleton & Co.

Maruja. By Bret Harte. Boston: Houghton, Mifflin & Co.

As It was Written: A Jewish Musician's Story. By Sidney Luska. Cassell & Co.

The Last Meeting. By Brander Matthews. Charles Scribner's Sons.

It is not always well to lay claim in the title-page to more than the succeeding pages will warrant. Without the assertion made for 'A Mission Flower' (with just the least appearance of boastfulness) that it is "an American novel," one would not be led to put much stress upon the nationality of Doña Solace's two lovers—one the son of an English baronet, the other with the name of Don Silva and a title when he chose to employ it. Nor would one find fault with Doña Solace herself, and the manner in which she had grown up under the schooling of Mme. Clement—a court lady and founder of the Sacré Cœur—in an old mission school. But when one sets out to read an American novel, one asks for people a little nearer than these to our average type to play the chief parts; one asks for a less vague locality than the "great midland country," for more color than is given by a few cottonwood-bordered streams and a band of Indians attending mass, and is not to be put off with the backneyed figures of the politician and his ambitious wife. The story is an unpleasant one, and the indirectness with which it is told fails to relieve, except here and there, its sombre color. Mr. Picard has chosen to use only ordinary incidents for binding together the threads of his plot—a style of story-telling that is apt to prove uninteresting in the hands of any but a clever writer. And a clever writer Mr. Picard has not shown himself to be in 'A Mission Flower.' The only bit that shows an approach to cleverness is Mme. Clement's description of old Father Caron nodding at the examination of the history class; while the one scene that stands out as not devoid of strong and pathetic qualities is that in which Doña goes to her lover (not her English lover, of course), and learns from his own lips that he had killed her father.

'Without a Compass' is aptly named; for a more aimless, drifting combination of characters and incidents it would be difficult to find. Yet if one glances over the titles of the chapters, the story would seem to have been laid out by rule and square from the beginning; and on no mean scale, either, one thinks, after reading awhile. But the scope was too ambitious, the lines too many and too broad, and before the end they are seen to have gone all astray. It is useless to know the height of men in feet and inches, the exact shade of their hair and eyes, and a matter-of-fact history of their grandparents, if we are not to be interested in them; and one cannot be interested, in a novel, by tedious people or by tedious details concerning them. It is hard to say whether 'Without a Compass' was written from a moral or an artistic impulse. If from a moral one, the choice of the main incident—the unfaithfulness of a beautiful, cultured, high-minded woman to her uncongenial husband—was an unfortunate one; for no matter how vividly the bitter consequences of such an act may be portrayed, the influence of this oft-told story for good or evil is always doubtful, and a moralist should never be in doubt as to the effect of his illustrations. If the book was written from an artistic impulse, the writer has been again unfortunate, in that by paying too much attention to detail he has failed to produce the unity of effect, the sustained interest, and the clear-cut, embracing outlines that are essentials in a work of art. The novel is no trivial one; its tone, indeed, is almost too earnest for a novel. It shows evidence of thought and learning; but it also shows that the writer's knowledge of the human heart has been gained as much from books as from his sympathy with humanity.

There is but little to be said of Bret Harte's latest novelette, 'Maruja,' except that it is clever. The nervous, energetic style tells to advantage in a tale like this of the wilful and beautiful Maruja—with her odd mixture of Puritan and Spanish blood and her queer assortment of lovers—where surprises are constantly awaiting one, and the approach to a tragedy is just near enough to keep one's interest pitched high. It is well the story did not turn out a tragedy, however, for as such it would have been ruined by the touches of newspaper writing which mar its pages. But with the tramp lover the successful one, with the bright sayings of the civil engineer, and the amusing figure of the California Aladdin, one can forgive the occasional want of simplicity. Perhaps it is too precious a quality to be thrown away in every line, and is only prized the more for being now and then lacking. Yet Guest should not have asked Maruja to "fly" with him; a Missourian who had "tramped" to California would have been contented with "go."

The popularity of 'Called Back' was sure to produce plenty of imitations; but it is not likely that there will soon be a better novel after the style of Mr. Fargus's work than 'As It was Written.' Ernest Neuman, a Jewish musician, after parting with his betrothed late one night at her home in an apartment house on Fifty-first Street, went back in the morning and found her murdered. He was tried for the crime, and, from lack of evidence, acquitted. Thrown into a state of despondent indifference by his sorrow, he gave up music, which had been his passion, and earned his living by waiting in a wine-room. Here he met a young poet who became his friend, and drew him, in a measure, back to his former life. By a chain of coincidences he discovered a writing left by his father, whom he had never

known. By this writing he was adjured to avenge the dishonor of his mother and the misery of his father on Nicholas Pathzuol, who had wrought them, or on his next of kin. "From my grave I shall watch over you," wrote his father. Pathzuol had been the name of his betrothed. One night, in playing his violin, he unconsciously composed a wonderful piece of music. Not believing it to be his own, yet not able to remember the composer, he wrote it down. Toward the end he wrote as he played—unconsciously; and when he had finished he discovered that the last he had written was words instead of music. From these words he knew that, controlled by his father's spirit, usurping his own will, he had been the murderer of his betrothed. In spite of the improbability of such a story, it is told with so much art, with such a deft blending of the musician's nature with the inherited superstitions of his race, that the improbability never grates. It is a book for the hour, however—an "idle tale, full of sound and fury, signifying nothing," and only valuable as showing how well a poor thing can be done.

Even Brander Matthews has been led off by the taste for mysteries. He has not been led far, however, and the mysterious disappearance of Frederick Olyphant, in 'The Last Meeting,' is not so vital a point of interest as the time and manner in which he is to be reproduced and an end put to the miserable uncertainty of his sweetheart. The introduction of a diagram to explain what had already been made clear, is a needless concession to the passion for detective literature, and one is hardly reconciled to it even by the charmingly natural account of the Full-Score Club at dinner. All through, in fact, one accepts the mystery because one realizes that there must be some sort of a main thread to the story, and then fully enjoys the genial friendliness of Uncle Larry, the stubborn obtuseness of Mr. Hobson-Cholmondeley, and the pertness of Pussy Palmer. Mr. Matthews's character-drawing is delicate and pleasant. The effort to individualize is never to be seen, but his characters stand out distinct and complete, for all that. And in 'The Last Meeting' they are all more or less clever and entertaining—the writer has not tried his hand at tiresome people. Even the revengeful Greek is not altogether a despicable villain. He appears only at second-hand, to be sure, but there is nothing shadowy or vague about his personality. His refusal to owe his life a third time to the man whose destruction he had planned was really heroic. One is somewhat surprised, though, that he should not have tried to carry Olyphant with him to the bottom of the Pacific.

RECENT LAW BOOKS.

Mr. Robert Ralston's thin monograph, 'Principles of Sale: their Application to Sale of an Undivided Part' (Philadelphia: Rees, Welsh & Co.), discusses, in the compass of fifty octavo pages, an interesting point in the law of sales of personal property. What is it that really happens when a man contracts with another to sell grain which is part of a larger mass—and in like cases? Does the title pass, or is it merely matter of contract? Mr. Ralston puts his question in the form, *Can* the title pass? and finds no difficulty in saying that it can. But he really goes further: "There is no reason of philosophy or convenience why it should not," etc. There is no difficulty at all in saying that title can pass, but there is considerable difficulty in saying that it does or that it should in ordinary cases. The attentive reader must see that the author fails to appreciate some of the grave questions that have troubled the discussion of this subject. Does the buyer become an owner in common? *Can* he have title in any other way? If he is owner in common, how can he bring trover for a refusal of the other owner to deliver his share or let him take it? If he is not owner, how can trover be sustained, on the doctrine of estoppel, when both parties knew that the property was undivided? Certainly it is not "the same thing" to say that title has passed, and to say that a particular defendant is estopped to deny it. The author accepts quite too readily certain cases, and certain loose expressions of judges. And yet his general result we take to be right.

Pollock's 'Principles of Contract' appears in the "second American from the fourth English edition" (Cincinnati: Robert Clarke & Co.), edited, as before, by Gustavus H. Wald, of the Cincinnati bar. This book deserves a better dress of printing and binding than the publishers have given it; but there appears to have been an effort to prevent the material from swelling into two volumes, and this goes some way to excuse one of the faults mentioned. Professor Pollock's book is marked by learning and the vigorous application to his subject of well-trained faculties. A knowledge of our own ancient law and of the Roman system enables the author to elucidate and give interest to his generally excellent and well-ordered statements of the law. It is a book to be recommended to students, and to any lawyer who wishes to read what will cheer and invigorate his intellect instead of baffling it, as so many law books do. Mr. Wald's notes are careful and intelligent.

The fourth edition of 'Washburn on Easements and Servitudes' (Boston: Little, Brown & Co.) is the first since the author's death. It is edited, "revised and enlarged," by Simon Greenleaf Croswell, of the Boston bar. This book has always been reckoned to contain some of Professor Washburn's best work. It followed his larger book on Real Property by a year, in 1863—something less than eight years after the author had begun to lecture at the Harvard Law School. This is the first time, we believe, that anything by Professor Washburn has been edited by another hand; his own conscientious labor in preparing his treatises sets a high standard for the editors who must now take up the task. Mr. Croswell, who is, we believe, the grandson of Professor Greenleaf, had another high example in a well-known edition of Cruise. He has done his work worthily and well. It consists not merely in adding the principal late cases, but in accurate, neat, and valuable contributions both to the notes and the text, the latter being carefully distinguished from the author's work.

A second edition of 'Browne on the Law of Trade Marks and Analogous Subjects' (Little, Brown & Co.) is now published, after the space of twelve years from the date of the first edition. It is an excellent book, marked by careful and ingenious discrimination and exact statement; characterized also by certain engaging peculiarities of style which give the reader a personal interest in the author. We venture, however, to advise the author to be on his guard in the matter of style; that way danger lies. Although, like flavor or a color, style hardly constitutes, in itself, a trade-mark, yet a man might almost argue it into the author's description of one, when he says that a trade-mark "is, in fact, the commercial substitute for one's autograph." One does not need to be a lawyer to enjoy the curious and refined discussion as to the *differentia* of the trade-mark—its relation, for example, to patent rights, and trade-labels, and the qualities of color and form. Mr. Browne's own hearty interest in these matters communicates itself to his reader. A valuable appendix gives the statutes of the European countries and of Japan. A good feature of the work is the frequent illustration of the subject by the decisions of foreign courts.

'The Code of Civil Procedure of California, being one of four volumes of "the codes and annotated statutes of that State," edited by F. P. Deering, has lately been published by A. L. Bancroft & Co., San Francisco. This new edition seems to have been diligently edited. The title-page states that the notes refer to all the decisions of the California Supreme Court bearing upon particular sections of the Code, as well as to cases in other States. Of course the book is indispensable to lawyers in California. For persons elsewhere, it has but slight interest; and in a scientific point of view only the slightest. It is a great misfortune to any State to have fastened upon it such crude work as some parts of this volume show. Those States are wiser which await the maturer results of legal scholarship. To revise, simplify, and amend the law—these things ought indeed to be looked after, and far more attentively than they are. But codification should be the last and not the first result of legal study and reform.

WITCHCRAFT IN MASSACHUSETTS.

Notes on the History of Witchcraft in Massachusetts. By George H. Moore. 1883. Pp. 32.

Further Notes on the History, etc. By Abner C. Goodell, jr. 1884. Pp. 52.

Supplementary Notes on Witchcraft, etc. By George H. Moore. 1884. Pp. 25.

Reasons for Concluding that the Act of 1711 Became a Law, etc. By A. C. Goodell, jr. 1884. Pp. 21.

Final Notes on Witchcraft, etc. By George H. Moore. 1885. Pp. 120.

These five pamphlets contain as pretty an antiquarian discussion as ever absorbed the attention of a select circle of experts. The questions involved were of slight importance, but the disputants were in earnest and were well-matched. Mr. Moore has an unrivalled collection of the printed laws and legislative documents of Massachusetts; Mr. Goodell, as editor of the five volumes of the 'Province Laws,' is without a peer in precise and minute information regarding the early archives. The discussion was therefore exhaustive of the subject, and each successive pamphlet teemed with instructive and curious matter, more or less germane to the question.

Mr. Moore began with the statement of certain popular errors which he meant to correct: viz., that there was no colonial law against witchcraft in force in 1692 in Massachusetts; that the prosecutions took place under English law; and that witchcraft was not a criminal offence at common law. Secondly, that no lawyer was engaged in the trials. Thirdly, that the Act of 1711 reversing the attainders was never passed. Fourthly, that the attempt of the Legislature to make reparation to the families of the victims was abortive.

Mr. Goodell, in rejoinder, acknowledged that the first two points were made out, but he demurred stoutly to the last two. He stated that he was in error when he told Mr. Moore that he found the titles of several acts recorded in 1711, which did not appear to have been signed by the Governor. Four of these, however, soon appeared. It was on record that the bill to reverse the attainders of George Burroughs, and others, for witchcraft was read and concurred to be enacted, November 2, 1711. Mr. Goodell produced, moreover, a printed copy of the Act, as issued from the press of B. Green, "Printer to his Excellency the Governour and Council, 1713." He also produced evidence of payments to the heirs of the victims. Lastly, Mr. Goodell defended the legality of the court which tried the witches.

Mr. Moore's "Supplementary Notes" were an attack upon the genuineness of this newly-dis-

covered printed act, and he intimated very strongly that it was not what it purported to be, though its antiquity was not impeached. Mr. Goodell replied, defending the authenticity of the Act, showing that this copy was bought at the Wiggin sale, and bore the autograph of Nathaniel Lambert, who was in 1805 employed in the office of the Clerk of the Court at Salem. This discussion is full of close argument and antiquarian lore, and the reader will, perhaps, be sorry that he cannot agree with both disputants.

Mr. Moore's "Final Notes" reviewed the whole subject of Attainders with Corruption of Blood, Escheats, Forfeitures, etc.; made a brilliant attack upon the legality of courts of Oyer and Terminer; gave an interesting memoir of Thomas Newton, an English lawyer employed in the trials; and wound up with an essay, upon the Records of Massachusetts, which no one else was equally fitted to prepare. As we said at the outset, the discussion was on trivial points, but the five pamphlets are of great interest and value. It is pleasant to find that we possess antiquaries who can write with grace, argue with precision, and show themselves thorough masters of the subjects involved.

Of Doctor Moore's unrivalled collection of the printed Journals and Laws of Massachusetts, it is needless to speak. But we desire in this connection to notice another pamphlet, entitled "The Province Laws: their Value, and the Progress of the New Edition" (Boston: Cupples, Upham & Co., pp. 24). In this pamphlet Mr. Huntoon pays a glowing but deserved tribute to Mr. Goodell and his labors, prompted thereto by a message of Governor Robinson clearly inimical to a further expenditure. He shows that Messrs. Clifford, Ames, and Goodell, the Commissioners appointed in 1865 to prepare a complete edition of the Province Laws from 1691 to 1780, had done an immense work at a trifling cost. The five volumes (one of which was destroyed by fire and was reprinted) cost $77,500, of which $15,500 went to the Commissioners. Mr. Goodell received for twenty years' labor $11,800, or about six hundred dollars annually. Even a "hay-seed" Legislature could understand this argument, and the Governor took nothing by his ill-timed and undignified attack. Doubtless he wrote on misinformation and has regretted his act.

As was clearly shown, this edition of the Province Laws is a marvel of erudition as well as of cheapness. The engrossed bills have been consulted, and deficiencies supplied from the English State Paper Office; necessary notes have been added; and voluminous indices render the volumes of immediate service to every student. The work will be an imperishable monument to the State as well as to the self-sacrifice of Mr. Goodell, the main worker and the only survivor of the original Commission.

It may be added that, though recent Legislatures have refused to complete the good work by reprinting the colonial laws prior to the second charter, the city of Boston has been more liberal. The "General Laws and Liberties" according to the edition of 1672, with the annual acts up to 1691, will be soon issued in facsimile by the Record Commissioners of that city. It is not impossible that even the second edition, of 1660, will also appear. The first edition, of 1648, is probably forever lost.

Life of Frank Buckland. By his Brother-in-law, George C. Bompas. London: Smith, Elder & Co.: Philadelphia: J. B. Lippincott Co. 8vo, pp. 433. 1885.

FRANK BUCKLAND was a very fortunate man. Inherited tastes, education, position, profession, and circumstances, all contributed directly to advancement in his chosen career. In his case there was little occasion to struggle with disposition or surroundings. Nature had equipped him well. His father, Dean of Westminster, by training, influence, and wealth, made his path one of the smoothest. A life so favored is rare. Mr. Bompas gives a very entertaining account of it—a little one-sided, perhaps, in dealing so exclusively with natural history, but possibly the more correct for that very reason. As a child, Frank's toys, playmates, and treasures were those of a naturalist. When twelve years old he began his school life at Winchester. In the account of this period—Mr. Bompas has allowed him to write a large part of the volume—he says little of the branches taught; the prominent features were school customs, more or less disagreeable, and animals. Præfects, fags, launchings, tin gloves, building fires, cleaning knives and basins, coffee-making; midnight puddings boiled in neckties; lickings for making heavy puddings, and many other reasons; bolstering matches, rods and rod-making; floggings by the master; tundings and clows and whippings with groundashes by the præfects; snaring cats and rooks, hunting rats, wiring trout, mouse digging, dissections, macerations; owls, buzzards, eagles, raccoons, hedgehogs, monkeys, hyænas, turtles, snakes, and other pets kept in room, lockers, pockets, or sleeves; everything but lessons.

The five years of preparation for Oxford appear to have been given mainly to irregular study of animal life. At Oxford the record is much the same, with less of the disagreeable; it contains almost nothing of college studies, considerable about noted personages, and a great deal concerning Buckland's energy, industry, and irregularity in accumulating facts of nature. A menagerie in the courtyard, another in his room, animals escaping day by day, dissecting, macerating pots, the noise of the pets and of their owner, must have made his neighborhood an undesirable one. How so much lack of neatness, and so much noise and disturbance, are reconciled with unselfishness and consideration for the comfort of others, we may not see, yet Frank is said to have been one of the kindest and most considerate of men. He was preparing to be a surgeon; his object, not fame or money, but the good of his fellow-men: "My object in life, to be a great high priest of nature and a great benefactor of mankind." During vacations he visited the Continent, and at the end of three years left Oxford for a five years' term at St. George's Hospital, before becoming assistant surgeon in the Life Guards.

While at St. George's he published his first article, "Rats," and gave his first lecture, "The House We Live In." After joining the Guards his lectures and articles were numerous, furnishing the basis of the first series of the 'Curiosities of Natural History.' And now the value of the materials he had gathered became apparent. From the first his utterances were popular with both the masses and the learned. In great part his success was due to his habit of imparting amusement and information in the same breath. "I can't get on until I make them laugh; then we are all right." His aim was not so much to add to knowledge as to make science practical, to induce thought, comparison, inquiry in Nature's book, open to all. Specimens in his own collection, which ultimately became a museum, or arrivals at the Zoölogical Gardens, often furnished him with topics, and publication was followed by crowds to see the things described. Through life he continued to acquire with the energy and irregularity that characterized his youth; everything became of value in lectures or writings. Occasionally in his haste he jumped at a conclusion; he was ordinarily very clear-sighted, and humbugs were not safe in his presence. On one occasion at Cremorne Gardens he saw an exhibition of magnetism. "Young girl twelve years old magnetizes her brothers; great humbug; examined people when in magnetic state; not uniformly stiff. The iron-lifting done entirely by knack. The people go determined to believe what they see." As a good observer he weighed evidence carefully, and was seldom deceived. The story of serpents swallowing their young for protection he never credited, yet he kept numerous vipers for observation. "Amid more serious labors, he examined and exposed the humbug of spirit rappings."

Objects of general interest were frequently touched on, but always in connection with his specialty. As an art critic, his career was cut short by a storm raised by the artists; they resented comment by a man who was unfamiliar with their mode of representing, no matter how well he knew the objects they had attempted. The style of his notes is shown by the following: "No. 67. Meant for a sleeping baby and mother. The baby is not asleep, only pretending. The lady does not look like its mother, or she would be looking *at* the baby and not away from it. She is probably the nurse." "No. 57. A Dog attacking a Hedgehog. Not a very plucky dog. His mouth is shut, and it ought to have been open, and his lip should have been bloodstained with the prickles of the hedgehog. He should have been made barking. A dog can't bark with his mouth shut."

Failing to obtain promotion after eight years' service in the Guards, he resigned and turned his attention during the remaining seventeen years of his life wholly to practical natural history and to literature. From this time he was constantly before the public. His writings and lectures were very entertaining, and always packed with information. Though humorous, the amount of exaggeration was comparatively small; mistakes of fact were rare. "Of the lion, the most dangerous thing is its fearfully crushing paw. When a man was killed by a lion at Astley's, I went soon after to see the lion, and found that the man had very foolishly run away, instead of facing the lion; the lion just patted him on the back with his paw, and he died in an instant. . . . There is behind the larynx a vibrating machine, which produces the sound by which all other animals are awed: a roar, a spring, and a pat with his powerful paw, and they are dead." In the account of the swordfish: "All the teeth of this beast seem to be concentrated, as it were, in this one huge tooth; and the mouth is exceedingly small." The sword is in no sense a tooth; it is formed of the intermaxillary and maxillary bones, at its base including the nasals. Was Mr. Buckland confounding the fish with the narwhal? Elsewhere we are informed that Pontoppidan's sea serpent was the *Scoliophis atlanticus* of the Americans—the common black snake: a most unwarranted identification.

The articles in *Land and Water*, the *Field*, and other papers were widely read and copied. Through them and his books, 'Curiosities of Natural History,' 'The Log-Book of a Fisherman and Naturalist,' 'Notes and Jottings from Animal Life,' 'Fish Hatching,' 'The Natural History of British Fishes,' and others, including new editions of White's 'Selborne' and his father's Bridgewater treatise, Frank Buckland became one of the best known of Englishmen. The work to which he devoted most attention was done in connection with fish culture and the fisheries. As Inspector of the Fisheries he seemed to reach the height of his ambition. Giving his entire energy to the work, he achieved results beyond those of any other man in the same direction. His writings on fish and fisheries are voluminous and very important. His influence on legislation was great. Recognizing

the rights of owners, millers, and fishermen, he secured their coöperation in regard to devices for fish-ways in passing the dams, weirs, and other obstructions in the fresh waters. Concerning the marine fisheries, he early reached the conclusion, which we are more slow to reach, that, in the open sea, matters are too much beyond the control of the Fish Commissioner to permit him to work with any prospect of controlling the supply.

Comparatively little stress is laid on anything in the life of Frank Buckland not connected with natural history; this gives the work its one-sided appearance. We know, however, that he was very pious. Being so, he could accept evolution neither in its Darwinian phases nor in general. Though accepting his religion through faith and belief, he was naturally sceptical, and required strong proofs for anything out of the usual way. Firmly believing in design, he accepted only objects or effects as proof, not seeing that processes might be more conclusive evidence. The trouble his mother foresaw in his volatile disposition was obviated by earnestness, industry, and a noble purpose. Few have done more in disseminating science and in making it practical. To continue his teachings he leaves an excellent reputation, his writings, and his museum—casts, mounted specimens, and skeletons—mainly the work of his own hands.

Mr. Bompas's account is something of a mélange. The chapter on Special Inquiries, etc., for instance, has eleven pages on fisheries, followed by twenty-five pages of odds and ends of notes and anecdotes of monkeys, elephants, etc., not at all connected; but the volume is full of interest and information, and gives a good idea of a most successful life.

Farthest North; or, the Life and Explorations of Lieutenant James Booth Lockwood, of the Greely Arctic Expedition. By Charles Lanman. Small 8vo, pp. 333. D. Appleton & Co. 1885.

THIS little volume is chiefly intended as a memorial of Lieutenant Lockwood, whose pathetic death, after having achieved the highest latitude yet attained by civilized man, is still fresh in the memories of all. He was born at Annapolis, October 9, 1852, and was the second son of Prof. (afterward General) Henry H. Lockwood, a graduate of West Point then teaching at the Naval Academy. Something of his early life, chiefly interesting to relatives and friends, is told by Mr. Lanman. It does not seem to differ much from that of most active, intelligent, well-bred, but not over-studious lads of his age. In 1873 he received the appointment to a lieutenancy in the Twenty-third Infantry. His military service was active and creditable, though not particularly remarkable. In 1880 he volunteered for service with the Greely expedition, was accepted, accompanied the expedition, performed some noble service in exploration, and died amid the horrors of Camp Clay, on the 9th of April, 1884.

The story of his work on the expedition is condensed from his journals, and bears ample testimony to his courage, devotion, cheeriness, and faithful support of his commander. This is the only part of the work with which the public is concerned, and it naturally occupies most of the book. It gives incidentally some insight into life at the station, and its trials, the worst of which were not the exposure to cold and privation, but the evils of association with uncongenial spirits, unsuited for the task to which they had applied themselves. There is much well worth the reading by young people, and from which they can hardly fail to draw useful lessons.

The author's style is hardly equal to his subject, and, had the latter less intrinsic interest, would be dull and unattractive. Good taste, however, is shown in both the inclusions and omissions. There is an excellent steel portrait of Lieutenant Lockwood, and several other illustrations, together with a very good reproduction of the original map of the explorations as published by the Geographical Society of London. The nomenclature of this differs somewhat from that of the official map issued afterward, which commemorates a number of officers distinguished for having had nothing to do with the exploration or the explorers. The make-up of the volume is good, and the only technical defect we have noticed is the absence of an index.

Lalla Rookh: an Oriental Romance. By Thomas Moore. Boston: Estes & Lauriat. 1885.

M. QUANTIN, of Paris, published in 1882 the trifling little brochure, by M. Octave Uzanne, called 'L'Éventail,' with an abundant decoration of pretty little vignette-like marginal prints after drawings by M. Paul Avril. These prints were, one in dusky red, the next in blue, and the third, perhaps, in dark olive-green, then one in vermilion, and a fifth in bistre. Very dainty and pretty they were, though without much meaning. The book was delivered in ornamental paper covers, and with it was sold a silk-covered portfolio tied with ribbons. The happy buyer was warned not to bind up his treasure for a year or more, for fear of injuring the pages opposite the illustrations with the printing off of ink that might not be dry. The edition was limited. The success of the dainty book was immediate; it was followed in 1883 by a similar volume called 'L'Ombrelle—Le Gant—Le Manchon,' and the two set a fashion. Now this edition of 'Lalla Rookh' is an attempt to follow the fashion, but it is not attractive. There is nothing tempting about it; the pages are not well distributed, the illustrations are clumsy, the colors are rather harsh, and the aspect of the vignettes not very refined. Nor does a closer look reward; it is hard to detect much merit in the designs, though toward the end, in drawings by Mr. Cox and Mr. Low, we approach nearer to what is simple and truthful in design. Mingled with the illustrations to the narrative are some bits of facsimile from miniatures in Persian manuscripts—mere outlines, not having any especial connection with the text, and assuredly not decorative.

L'Encaustique, et les autres procédés de peinture chez les anciens. Histoire et Technique par Henry Gros, statuaire et peintre, et Charles Henry, Bibliothécaire à la Sorbonne. Paris: J. Rouam. 1884.

THIS second volume in the second series of the "Bibliothèque Internationale de l'Art," published under the able direction of M. Eugène Müntz, the accomplished Conservator of the École des Beaux-Arts, fully sustains the high character of the preceding volumes, and, as it gives accurate information on an important subject in a compact form, opportunely fills a recognized gap in art literature. With the single exception of Otto Donner's introductory chapters to Helbig's 'Wall Paintings of the Campanian Cities Destroyed by Vesuvius,' which contain a learned and carefully written account of antique methods of painting, it is by far the best, while of the two it is the more exhaustive, being a complete treatise and not an episode. Donner, as far as his limits allowed, is, however, so thorough that we think the authors of the present work are hardly justified in saying that the question, What is encaustic painting? has been often asked but has never been scientifically investigated. It is clear to any one who looks into the matter that their labors have been much lightened not only by Donner but also by the Abate Requeno and by many other investigators, although the conclusions reached are in many cases different from their own. Thus, for example, as MM. Gros and Henry tell us on page 78, Donner thinks that the wax used for encaustic painting was not liquefied by fire or by ethereal oils, but that it was rendered plastic by an admixture of balsamic resin or fatty oil. They, on the contrary, believe that the painter melted sticks of mingled wax and resin of different colors and shades of color in little cups sunk in a metal palette, and that he laid on the liquefied wax with a brush. Then, taking heated iron instruments of different shapes, he worked over the surface, harmonized the different tones, and reduced the whole to a smooth and finished condition.

As it is impossible within the limits of a book notice to enter upon a comparative examination of all the points on which MM. Henry and Gros are at issue with preceding writers on the subject of encaustic painting, we shall content ourselves with a brief account of the process, and a mention of the implements required by the encaustic painter. In Greek there are two expressions for painting, namely, ἀλείφειν, to paint mechanically, *i. e.*, to coat with color, and γράφειν or γραφῇ μιμεῖσθαι, to imitate or paint artificially. Ship-painting, mentioned by Homer, which comes under the first head, must have been in encaustic, as water-color processes were not available in the nature of the case; while wall and easel painting, which come under the second head, may have been in encaustic distemper or fresco. Pliny mentions three kinds of encaustic painting:

"In ancient times," he says, "there were two methods, namely, on wax and on ivory with the cestrum (spatula), *i. e.*, with the vericulum, until people began to paint ships. Then the third method was added, by which, after the wax had been melted, it was laid on with a brush, a kind of painting which suffers no change from the sun, the salt water, or the winds."

Our authors (p. 64), as Welcker, Letronne, and Donner had done before them, point out the incorrectness of Pliny's statement in this passage regarding the chronological sequence of the three methods, there being no doubt that what he calls the new method used for ship-painting is far the most ancient.

The materials needed for encaustic painting are a box to hold wax of different colors, a small furnace, a palette, and a number of brushes and metal instruments of iron or brass of divers shapes. The furnace is needed to melt the wax; to keep the palette hot, so that the colored wax, being in a semi-fluid state, may be used like a pigment; and also to heat the irons needed to melt and model the wax previously laid on with a brush, which stiffens immediately. As, then, irons are used to harmonize and unite the tones, as well as to perfect the modelling in general, they should be of various shapes—flat, round, straight, and curved—so as to serve every purpose. One of the difficulties involved in this kind of painting relates to the varying amount of wax which different colors require to make them available—some of them, the light, needing less, and others, the heavy, needing more. To meet it, the Comte de Caylus prepared a table showing the relative proportion of wax to be mixed with each color, which table is reprinted on page 82 of the present volume, with a practical method of making use of it.

Considering that encaustic painting does not flake, that it is not affected by time, that its surface sheds dust, that it does not change under exposure to the sun or to artificial heat, and that it can be indefinitely retouched, it seems surprising that, despite all that has been urged in its favor from the sixteenth century to the present day, it has not as yet taken a place among modern

arts. There would seem to be some mystery about it still unsolved, like that which hangs about Greek music and polychromatic sculpture. If so, the present treatise, whose chapters on the history and practice of encaustic and distemper are extremely well illustrated by examples of both methods preserved at the Louvre and elsewhere, should go far toward clearing it up. In conclusion, we desire to call attention to its final chapter, in which the question as to the greater or less evolution of the color sense in antiquity, previously treated by Mr. Gladstone, by Hugo Magnus, and by I. W. Farrell, in an interesting article called "Light from the East on the Color Question," which appeared in the *Nineteenth Century* last February, is ably discussed.

The History of the Church known as The Unitas Fratrum, or the Unity of the Brethren, founded by the followers of John Hus, the Bohemian reformer and martyr. By Edmund de Schweinitz, S.T.D., Bishop of the Unitas Fratrum. Bethlehem, Pa.: Moravian Publication Office. 1885. 8vo, pp. 693.

We are informed in a note that Bishop de Schweinitz's history of the Moravian Church (as it is commonly called), which extends to the year of its renewal, 1722, is the first of a series of two, but is complete in itself. The other volume, when published, will contain the history of the Brotherhood from 1722 to the present time, and this work also will be complete in itself. The religious body whose history is related in this interesting work is a remarkable and almost unique organization—a body of Protestants older than the Protestant Reformation. This distinction it shares with the Waldenses of Italy; and it is an interesting fact, which we learn from this volume, that the closest relations existed between these bodies in the fifteenth century, the episcopate of the Bohemian church having received its consecration from the bishops of a branch of the Waldensians, which existed in Bohemia. The Moravian Church—in truth rather Bohemian than Moravian—was founded upon the teachings of Hus, and was an offshoot from the Utraquist or Callixtine Hussite Church, which prevailed in Bohemia in the middle of the fifteenth century. It was in its essence a *puritan* protest against the worldliness and (as we are assured) immorality of the national church. Having seceded from the national church, it is no wonder that we find it the object of persecution by the Hussite archbishop, Rokycana, and the Hussite king, George Podiebrad. The relation of the parties reminds one of what we afterward find in England; but there was no such triumph for the protesters in Bohemia as the English Puritans attained under Cromwell. Rather, persecutors and persecuted alike were crushed by the relentless oppressions of the House of Hapsburg.

The story of this remarkable body of Christians is told exceedingly well in the volume before us, with earnestness and simplicity, and in an interesting style. The volume begins with a very brief history of Bohemia, and a more extended one of the Hussite movement, in which it is shown that, however great the debt which Hus owed to Wyclif, the movement of reform had independent roots in Bohemia; this point had been well worked out by Loserth and others. The period of the Hussite wars is passed over rapidly, perhaps too rapidly, as the nature and causes of the fatal schism among the Hussites are hardly made sufficiently clear. We reach the founding of the church (in 1457) on page 105 (chap. xii), and from this point the narrative is continuous. We will call particular attention to the formalities, described in chapters xv and xvi, by which the organized ministry and the episcopate were established. The mode adopted for the ministry was the Scriptural one of drawing lots; and (p. 133) "not only the men who were to be the first to assume this ministry should be designated in the same way, but the Lord should also determine whether the time had come for taking this final step." This was effected by the simple device of having nine names and twelve ballots, nine of them blank. If all should draw blanks, it would show that the time was not yet: as it was, no blank was drawn. The bishops, as we have said above, were ordained by a Waldensian bishop.

The Moravian church has had a history in America as honorable as in its original home; but our historians have passed it over with slight mention, because its activity was not conspicuous in the political field as was that of the Puritans of New England and the Presbyterians of New Jersey. As missionaries, their work has been unsurpassed in faithfulness and efficiency by that of any other body.

Physiological Botany. I. Outlines of the Histology of Phænogamous Plants. II. Vegetable Physiology. By George Lincoln Goodale, A.M., M.D., Professor of Botany in Harvard University. Ivison, Blakeman, Taylor & Co. 1885.

When the sixth edition of Gray's 'Botanical Text Book' came out, six years ago, it was found to be restricted to Phænogamous Structural Botany; for Vegetable Physiology and Anatomy, and all that pertains to cryptogamic botany—ample topics, requiring special knowledge, and now made much of in botanical instruction—were relegated to younger associates. One of these associates has at length brought out the book now in hand, which, although of wholly independent authorship, ranks as the second volume of 'The Botanical Text Book' aforesaid.

It is a comely volume, replete with matter, well elaborated and well ordered for the student's use. Besides its proper 500 pages, there is a separately-paged appendix of Suggestions and Practical Exercises for laboratory work—a kind of work which has in these days become essential, as well for the teacher and learner as for the original investigator in vegetable anatomy and physiology. Indeed, the botanical laboratory appears now to be as needful as the chemical or the physical, and is fitted with many of the same or similar appliances, not only with microscopes and their adjuncts, but with air-pumps and balances, clock-work and test-bottles in great variety, and an array of things and names sorely confounding to any well-regulated botanist of a former time, or even of twenty years ago. The first thing in botany is to know the forms and kinds of plants, with their obvious adaptations and relations, for which the unassisted or moderately assisted eye suffices. Yet to know how they are intimately constructed, and how they "live and move" in their style of being—so far as microscopical and physical research can inform us—should come in due course, and is equally advantageous in education, although in a rather different way. It is full time we had a special text-book for this study in our own language and adapted to our own ways. The 'Practicum' of Strasburger, or its abridgment, might well serve as a manual of manipulation; the Oxford edition of De Bary's 'Comparative Anatomy' of plants might supply the place of the first part of Doctor Goodale's volume, but it costs too much, and the translation, although scientifically clever, in some parts still needs to be done into English; and as to the physiology, we believe the only available substitute would be a volume by Hugo de Vries, which, being in Low Dutch, is not largely accessible.

Some text-books aim to be consecutive and readable rather than encyclopædic, and to be clear rather than complete. Some plot out the ground with particularity, fill in the details to order, carefully refer to differing views and the grounds of them, and endeavor to omit nothing which may possibly be deemed important. This book strikes us as of the latter type, and as, on that account, perhaps all the better for the student who is to acquire or at least to verify and extend his knowledge by laboratory work, rather than by mere reading and by hearing lectures.

Aus dem alten Pitaval. Französische Rechts- und Culturbilder aus den Tagen Ludwig's XIII., XIV., und XV.; auserwählt und erläutert von Hans Blum. Vols. I., II. Leipzig: C. F. Winther. New York: Westermann.

It would be superfluous, indeed, to mention, and equally useless to regret, the universal popularity of narratives of real or fictitious attempts to defeat the ends of justice. More than any other form of literature, they might be said to be the touch of nature which makes the whole world kin—from stable-boys to chief justices. The fact being admitted, it is certainly well to encourage the circulation of the better forms of this literature, such as certainly are French works of the kind, whether fact or fiction. There is a cynicism and a business-like quality in their heroes' villany which makes the contemplation of it positively healthful compared with the mawkish sentimentality in which are soaked the popular accounts of Jack Sheppard and Jesse James. The character of the volume before us is adequately described in its title. Pitaval was a criminal lawyer who published a collection of cases a hundred and fifty years ago in twenty volumes, and they made his name so well known as to cause it to be adopted for similar collections ever since. Mr. Blum has picked out and newly translated the most entertaining of these trials, among them of the De Calle imposition, which bears so striking a resemblance to the Tichborne case that, if we remember aright, it was cited on that occasion. The second volume contains, in footnotes and addenda, more original matter than the first. Pitaval's account of the trials of Cinq-Mars and Montmorency—victims, it is commonly supposed, of Richelieu's immeasurable ambition and diabolical ingenuity and malice—he claims to have entirely rewritten, with the aid of papers first published in this century, especially Avenel's edition of the letters of Richelieu, whom he thinks Pitaval maligned. Another important trial recorded in this volume is that which led to the banishment of Jean Baptiste Rousseau, whose innocence, practically recognized in his lifetime, is here, according to the editor, first positively proved. Indeed, Mr. Blum says that he himself discovered at Bern important papers bearing on this case, which he prints in an appendix. The frequent references to the newer histories of French literature, etc., increase the value of this edition.

Peasant Properties, and Other Selected Essays. By Lady Verney. London: Longmans, Green & Co. 1885. 2 vols. 8vo, pp. 292, 258.

The half-dozen essays which give the title to these volumes are based on travels in Germany, France, and Switzerland, and present peasant proprietorship in an almost altogether unfavorable light. These investigations into questions of modern politics are balanced by another half-dozen papers on "ancient habits of thought," chiefly as illustrated by legends; while the book is still further enlarged by various book-reviews and discussions of art, female suffrage, and American social life. Lady Verney's mind is de-

lightfully English in finding all other nations objectionable. She is shocked not only by the waste of land everywhere, but by the character of the shops, and the character of society at Vienna (and at Paris as well), and the state lotteries, and the weather; by the American travellers at the French hotels, and the various smells at Aix-les-Bains; by the rudeness of the French and German peasants, and the drunkenness of the Parisian artisans; by the arrangement of the railway trains, and even by French thrift. As regards Lady Verney's attempt to estimate our social life and character by a study of American novels, we will only remark that she speaks of *Boston*, not New York, as one of "the great centres of civilization." She deals kindly with nothing else about America or Americans; but none the less the book is the work of a good woman (Lady Verney, by the way, is a sister of Florence Nightingale), and we can give it no higher praise.

BOOKS OF THE WEEK.

Abbey, Henry. Poems. New ed. Kingston, N. Y.: Henry Abbey.

Adams, W. H. D. Egypt, Past and Present. Thomas Nelson & Sons.

A copy of any of Dr. Sauveur's Works will be sent post-paid to teachers by the author, on receipt of half the retail price.

Descriptive circulars, giving the retail price and the *introduction price* of each volume, will be sent to applicants.

Address. DR. L. SAUVEUR,
GERMANTOWN, Pa.

F. W. CHRISTERN,

37 West Twenty-third Street, New York,

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

NOW READY. SKIN DISEASES (a Manual of). Their Description, Diagnosis, and Treatment. Third Smaller Edition. By BALMANNO Squire, M.B., Surgeon to the British Hospital for Diseases of the Skin. Price 30 cents, post free, from the Publishers, J. & A. CHURCHILL, 11 New Burlington Street, London, England.

For convenience of subscribers wishing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,

in regular book form, ready for use by any bookbinder, who will put in the numbers for a small charge. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, postpaid.

These covers will fit all volumes from XXXIII. to XL., *i. e.*, since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering state the volume number wanted.

Address Publisher of the *Nation*, Box 794, New York.

NASH & PIERCE, 80 NASSAU ST., New York, have now ready an interesting Catalogue of books, including Americana, Local History, Genealogy, and Miscellaneous, which will be sent to any address upon application.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Microscopes. Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York. Catalogues by enclosing stamp. Established 1840.

YOUR BABY is entitled to the best bringing-up possible—physically, mentally, morally—with all the helps of modern times. The best place to learn all about these helps is in the modern journal BABYHOOD. This is not a child's picture book or story paper, but an illustrated magazine for mothers, solidly packed with useful information relative to the thousand cares and duties of nursery life. Any sample copy is its own best prospectus. It will pay you to send 15 cents for one, or $1.50 for a year, to

BABYHOOD, 18 Spruce St., New York.

Scribner & Welford's

NEW BOOKS.

Of Special Interest to Admirers of Richard Doyle.

A Journal Kept by Dick Doyle in the Year 1840.

Illustrated with several hundred sketches by the author. With an Introduction by J. Hungerford Pollen, and a Portrait. Demy 4to, $7 50.

*** The Journal has been reproduced in facsimile, and is printed on fine paper. It is handsomely bound in cloth, and forms a very elegant gift-book.

The Bairns' Annual.

EDITED BY ALICE CORKRAN.

With Frontispiece engraved in aquatint from a Painting by W. Luker, jr. Sq. 16mo, boards, 50 cents.

A fascinating book inside and out.

The Owls of Olynn Belfry.

BY A. Y. D.

Illustrated by Randolph Caldecott. Sq. 16mo, boards, 50 cents.

A pretty story prettily illustrated.

Urbana Scripta:

STUDIES OF FIVE LIVING POETS, AND OTHER ESSAYS. By Arthur Galton. In crown 8vo, cloth, $2 00.

"Goes far to found a school of criticism of higher merit than yet exists."—*Ecclesiastical Gazette.*

"Worth careful reading and consideration from the first page to the last."—*Literary World.*

THE MOON:

Considered as a Planet, a World, and a Satellite.

By JAMES NASMYTH, C.E., and JAMES CARPENTER, F.R.A.S.

A NEW AND CHEAPER EDITION.

With 26 illustrations of Lunar Objects, Phenomena, and Scenery, produced from Drawings made with the aid of powerful Telescopes, and numerous Woodcuts. Medium 8vo, cloth, $7 50.

FINE ART JUVENILES.

1.

WITH THE KING AT OXFORD. A Story of the Great Rebellion. By Prof. A. J. Church. With Colored Illustrations. 12mo, cloth, $2 00.

All the previous volumes by the Same Author also on hand. "Stories of ancient times which have endeared the name of the writer to boy readers."—*Daily News.*

2.

BORDER LANCES. A Romance of the Northern Marches in the Reign of Edward III. By the author of 'Belt and Spur.' 12 Illustrations in color. Crown 8vo, cloth, $2 00.

3.

TWO THOUSAND YEARS AGO; or, The Adventures of a Roman Boy. By Prof. A. J. Church. With 12 full-page illustrations by Adrian Marie. Crown 8vo, cloth elegant, olivine edges, $2 00.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. NEW HOLIDAY CATALOGUE OF CHOICE BOOKS READY. New Musical Catalogue ready.*

Charles Scribner's Sons

WILL PUBLISH SATURDAY:

The Greek Islands, and Turkey after the War.

By Henry M. Field, D.D., author of 'Egypt to Japan,' 'Among the Holy Hills,' etc. 1 vol., 12mo, with maps and illustrations. $1.50.

Doctor Field's famous series of books of travels, which began with the volume 'From the Lakes of Killarney to the Golden Horn,' receives in this volume a final and a particularly interesting contribution. The book is opportune, since it gives a striking picture of that country, about which the whole Eastern question revolves, and of the rapid and important changes which have been and are still going on in the Greek Archipelago and Turkey. The maps are of special importance and value.

Army Life in Russia.

By Lieut. F. V. Green, U.S.A. *A new edition.* 1 vol., 12mo, $1.25.

"It is most fortunate for the reputation of our country and our army that we had such an officer to send to the far-away land of Turkey in Europe, and most creditable to our War Department that it sent such a man. His book deserves to be universally read, and we are sure that no person whom these lines may lead to purchase it will fail to rejoice that they have been written."—*The Nation.*

The Illustrated Library of Wonders.

A new and revised issue of twenty-four volumes, containing over a thousand beautiful illustrations. Each volume 12mo, complete in itself. Sold separately at $1.00 per volume.

NEW VOLUMES:

WONDERFUL ESCAPES.
WONDERS OF THE SUN.
WONDERS OF EUROPEAN ART.

Messrs. Charles Scribner's Sons announce that they have become the publishers of the *Presbyterian Review*, which will enter upon its seventh year with the January number. During the coming year every effort will be made to make the *Review* stronger and better in every way—to make it, in brief, the most thoroughly satisfactory theological and literary review in America. The programme for 1886 includes important and readable papers by Donald Frazer, of London; President Hitchcock, Prof. Francis Brown, Robert Flint, of Edinburgh; Prof. A. A. Hodge, and others. The January number, which will be ready promptly upon the first of the year, will be particularly interesting. Prof. Witherow, of Londonderry, writes on "The Christian Ministry"; Prof. Knox, of Tokio, Japan, of "The Missionary Problem of Japan"; Dr. Henry J. Van Dyke, of "Ordination to the Christian Ministry"; other papers are by Prof. Francis L. Patton, Principal Caven, and Dr. Edson, of Indianapolis. The review department will contain contributions from the pens of well-known writers. *The Presbyterian Review* is a quarterly, and the price is $3.00 a year.

*** *These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

Charles Scribner's Sons,
743-745 Broadway, New York.

JUST PUBLISHED.

A Handbook for Lovers of the Opera.

The Standard Operas.

THEIR PLOTS, THEIR MUSIC, AND THEIR COMPOSERS.

By GEORGE P. UPTON.

12mo, flexible cloth, yellow edges.....$1 50
Flexible cloth, full gilt, gilt edges..... 2 00
Half calf, gilt top..... 3 25
Half morocco, gilt edges..... 3 75
Full morocco, flexible, very elegant..... 6 00

"In a word, Mr. Upton has done well a work that was thoroughly worth doing."—*Times, Chicago.*

"The work is very much to be commended for the great amount of useful information which it presents, and opera-goers will find it an exceedingly convenient handbook."—*Post, Boston.*

"A work simply invaluable to the general reading public. Technicalities are avoided, the aim being to give to musically uneducated lovers of the opera a clear understanding of the works they hear. It is description, not criticism, and calculated to greatly increase the intelligent enjoyment of music. The little volume is charmingly gotten up in dainty flexible covers and clear type. No book of the year is calculated to more truly heighten enjoyment of the season of opera, and its information is valuable at all times."—*Traveller, Boston.*

THIRD EDITION.

THE LIFE OF

Abraham Lincoln

By the Hon. ISAAC N. ARNOLD.

Large 8vo, 361 pp., with Portrait. Price, $2.50.

"Mr. Arnold's 'Life of President Lincoln' is excellent in almost every respect."—*The London Times.*

"To Mr. Arnold belongs the credit (though he did not live to enjoy his well-earned fame) of having written the most satisfactory 'Life of Abraham Lincoln' which has yet been published."—*New York Evangelist.*

"It is without exception the most satisfactory record of his life that has yet been written. Readers will also find that in its entirety it is a work of absorbing and enduring interest that will enchain the attention more effectually than any novel."—*Magazine of American History.*

FOURTH EDITION.

The Book-Lover.

A Guide to the Best Reading.

By James Baldwin, Ph.D., author of 'English Literature and Literary Criticism,' 'Story of Siegfried,' etc. 12mo, gilt top, 202 pages. Price, $1.25.

If a man needs that the love of books be cultivated within him such a gem of a book as Dr. Baldwin's ought to do the work. Perfect and inviting in all that a book ought outwardly to be, its contents are such as to instruct the mind at the same time that they answer the taste, and the reader who goes carefully through its 200 pages ought not only to love books in general better than he ever did before, but to love them more wisely, more intelligently, more discriminatingly, and with more profit to his own soul."—*Literary World, Boston.*

Sold by all booksellers, or mailed on receipt of price by the publishers.

JANSEN, McCLURG & Co.,
Cor. Wabash Ave. and Madison St., Chicago.

E. & J. B. YOUNG & CO.'S
NEW ILLUSTRATED BOOKS.

THE KNIGHT AND THE LADY.

A Domestic Legend of the Reign of Queen Anne. From the 'Ingoldsby Legends,' with the Old Letters and New Illustrations. By Ernest M. Jessop. Uniform in size and style with 'Ye Jackdaw of Rheims,' and 'Legend of St. Aloys.' Folio, illuminated paper boards, $3.00.

IN A GOOD CAUSE.

Published in aid of the Northeastern Hospital for Children, Hackney Road. Containing original contributions from Sir Richard Tempte, the Earl of Rosslyn, Lady Augusta Noel, Lady Constance Howard, the Bishop of Bedford, Oscar Wilde, Mrs. Cashel Hoey, A. Lang, A. Gaye, Bernard Quaritch, and others. Original illustrations by R. Caldecott, W. Callow, S. Carter, Tristam Ellis, Walter C. Horsley, G. L. Seymour, W. Taylor, E. Beck, and others. Edited by Mrs. Tyssen Amherst. Small 4to, printed on toned paper and bound in white, $1.50.

TOPSY TURVY.

By C. M. C. B. With numerous illustrations by Helen Miles. A most original tale for children from eight to fourteen; full of extraordinary adventures and teeming with fun and humor. Small 4to, cloth extra, $1.50.

SUNDAY.

THE NEW VOLUME FOR 1886.

Illustrated with colored Frontispiece and upwards of 250 Wood Engravings.

Full of delightful, original Tales and Scraps, providing attractive and healthful reading for the young in every sphere of life, all written for the purpose of helping children to look forward to Sunday as the happiest day in the week.

ILLUMINATED BOARD COVERS, $1.25.

NOTE.—The public are cautioned not to confuse this book with an alleged 'New Annual,' entitled, 'Sundays,' which is simply past years' issues of the English magazine *The Children's Friend.*

'SUNDAY' has a colored frontispiece and bears the imprint of E. & J. B. Young & Co. Any other book offered in its place is NOT the genuine publication.

TILES FROM DAME MARJORIE'S CHIMNEY-CORNER,

And China From Her Cupboard. By F. S. J. Burne and H. J. A. Miles. Oblong 8vo, illuminated paper boards, colored edges, $1.50.

This unique volume is illustrated with twenty-seven drawings in imitation of the old Dutch Tiles, but with Modern Figure Drawing, illustrating the Days of the Week, Seven Ages, The Seasons, etc. Each tile is accompanied with a descriptive verse. There are also representations of 56 rare specimens of Blue China, selected from some of the best collections.

A, B, C,

Drawn and Colored by Pym. Square 16mo, illuminated paper boards, colored edges, 75 cents.

Each letter of the alphabet is charmingly portrayed in figures and flowers, daintily colored; and on opposite pages is a verse, with an appropriate illustration printed in brown ink.

JULIANA HORATIA EWING AND HER BOOKS.

By Horatia K. F. Gatty. With a portrait of George Reid, R.S.A. Illustrated by fac-similes from Mrs. Ewing's sketches, and a cover designed by Randolph Caldecott. Small 4to, paper boards, 30 cents net.

LOB LIE-BY-THE-FIRE; OR, THE LUCK OF LINGBOROUGH.

By the late Mrs. Ewing. Illustrated by Randolph Caldecott. Small 4to, paper boards, 30 cents net.

Mrs. Ewing was engaged up to the time of her death in preparing, in conjunction with Mr. Caldecott, this work for the press. It received her last cares, and reflects in its external appearance, as well as in its contents, the cultured mind of the authoress.

E. & J. B. YOUNG & CO.,
Cooper Union, Fourth Ave., New York.

GEORGE ROUTLEDGE & SON
HAVE JUST PUBLISHED

THE FOLLOWING HANDSOME PRESENTATION BOOKS:

THE HISTORY OF MANON LESCAUT AND THE CHEVALIER DES GRIEUX. By the Abbe Prevost. With 225 original illustrations and 12 borders, by Maurice Leloir, and 12 page etchings reproduced by the Goupil process. (*Uniform with the Leloir Edition of the "Sentimental Journey."*) In a cloth double portfolio, $20.00.

In its mechanical features the volume is perfect. There are over 225 engravings on wood, in the form of the most charming head-pieces ever seen in wood production. The full-page etchings are beautifully executed and vividly illustrate the incidents of the story. The cover, printed in colors, is a veritable *chef d'œuvre*, both of design and execution. The binding portfolio is exquisitely stamped in gold and colors.

IDYLS OF THE MONTHS. A book of Colored Designs, emblematic of the Year, with appropriate Verses. By Mary A. Lathbury, 4to, cloth, with gold, silver, and three colors in inks; in a box, $3.50.

A book of exquisite designs in colors with the text in monotints. Each month is represented by a woman who is dressed in the *colors* of that month, and wearing the *jewel* of the month. *The jewels were drawn from originals, loaned to the artist by the* TIFFANYS.

Literary World: "A truly poetic conceit and a considerable artistic talent invest this volume with unity and a certain degree of beauty."

Christian Union: "One of the choice books of the season."

Hartford Courant: "It is sure to find favor in the holidays."

Susan Coolidge: "The 'Idyls of the Months' is one of the prettiest Christmas volumes of the year."

NEW LIBRARY EDITIONS.

MARRYAT'S NOVELS AND TALES. New illustrated edition. Printed from large, clear type, on fine paper. Each volume containing six or more full-page illustrations. 24 vols., 12mo. Cloth, in boxes, per set, $24.00; half calf, extra, per set, $72.00, and separately in cloth, per volume, $1.00.

NEW POPULAR EDITION. The above bound in 12 vols., with all the illustrations. 12mo, cloth (*sold only in sets*), $15.00.

ROUTLEDGE'S NEW ILLUSTRATED QUARTOS.

GREAT CITIES OF THE MODERN WORLD. By Hazel Shepard. Profusely illustrated with full-page and smaller views. 450 pages. Handsome lithographed double cover with substantial cloth back, 4to. Boards, $1.50.

GREAT CITIES OF THE ANCIENT WORLD. (*Uniform with the 'Great Cities of the Modern World.'*) By Hazel Shepard. Profusely illustrated. 4to. Boards, $1.50.

"An admirable book. . . . A brilliant book of its kind. . . . The reading matter is reasonably accurate and satisfactory. . . . An uncommon amount of pleasure and profit may be had from the book, and we wonder that we have never had one like it before."—*Literary World.*

HEROES OF AMERICAN DISCOVERY. N. D'Anvers. With Portraits of the early Navigators and scenes of their exploits. Beautiful lithographed double cover. 4to. Boards, $1.25.

"Is an interesting manual of American history, designed for young people."—*N. Y. Sun.*

"More readable than a bare history and more instructive than a mere biography; taken altogether is excellent."—*N. Y. School Journal.*

LIVES OF THE PRESIDENTS OF THE UNITED STATES in Words of One Syllable. By Mrs. Helen W. Pearson, author of the Histories of the United States, England, France, and Germany. With Portraits of the several Presidents, and many illustrations. Lithographed cover. 4to. Boards, $1.00.

HISTORY OF IRELAND, IN WORDS OF ONE SYLLABLE. By Agnes Sadlier. Fully illustrated. Lithographed cover. 4to. Boards, $1.00. Gives views of all the historically interesting towns and ruins; and has portraits of the better known statesmen from O'Connell to Parnell.

"Prepared with considerable skill; excellent type and well illustrated."—*N. Y. Nation.*

Sold by all booksellers, or mailed, postage prepaid, on receipt of price, by the publishers,

GEORGE ROUTLEDGE & SONS,
9 Lafayette Place, New York.

G. P. Putnam's Sons,

27 and 29 W. 23d St., New York,

HAVE NOW READY:

PALERMO. A Christmas Story. By Alice Durand Field, author of 'Christmas at Greycastle.' Illustrated with five etchings by Samuel Colman. Beautifully printed and bound. Octavo, $5.00.

HUMOR IN ANIMALS. A Series of studies in pen and pencil. By William H. Beard. With 36 full-page illustrations. Quarto, cloth.

THE HISTORY OF A GREAT Treaty. A Review of the War of the Spanish Succession and of the Treaty of Utrecht. By James W. Gerard. Octavo, cloth extra, gilt tops, $3.00.

"The author's aim has been to group together in proper sequence the events of that time, . . . in such a form of narrative as might prove interesting to the general reader as well as to the student of political history. This he has accomplished in a masterly manner."—*Daily Republican, St. Louis.*

"The book is at once a credit and an honor to the author and his publishers, who have done their part of the work with scrupulous care."—*Times, Philadelphia.*

THE TRAVELS OF MARCO Polo. Edited for Boys and Girls, with explanatory notes and comments, by Thos. W. Knox, author of 'Boy Travellers in the East.' Quarto, with over 200 illustrations, uniform with the 'Boy Plutarch' and 'Herodotus,' $3.00.

"One of the most captivating books for young people that have been published this season."—*Democrat, Rochester.*

"Mr. Knox's book is large, tastefully printed and liberally illustrated, and will be found well stored with matter amusing to boys and girls, and also to their elders."—*Press, Detroit.*

THE NATURAL HISTORY OF Pliny the Elder. Edited for Boys and Girls, by John S. White, LL.D. Uniform with 'Herodotus' and 'Plutarch.' Quarto, with 52 illustrations, $3.00.

"For the libraries of the young—and every boy and girl in the land should collect a library of their own—these superb books have a special adaptation: they open the classics to them."—*Journal of Education, Boston.*

"Bring within a single volume a vast fund of information in an accessible form, which needs only the skilful and scholarly treatment here displayed to make it of service to the young."—*Commercial, N. Y.*

HISTORIC BOYS. Comprising: Marcus of Rome, the Boy Magistrate; Brian of Munster, the Boy Chieftain; Olaf of Norway, the Boy Viking; William of Normandy, the Boy Knight; Baldwin of Jerusalem, the Boy Crusader; Frederick of Hohenstaufen, the Boy Emperor; Harry of Monmouth, the Boy General; Giovanni of Florence, the Boy Cardinal; Ixtlil of Tezcuco, the Boy Cacique; Louis of Bourbon, the Boy King; Charles of Sweden, the Boy Conqueror; Van Rensselaer of Rensselaer, the Boy Patroon. By E. S. Brooks. Quarto, illustrated, $2.25.

'Historic Boys' tells the story of some of the world's remarkable boys, not as a dry biographical record, but in a series of brilliant and exciting stories, based upon historical facts in the lives of the lads selected as representative of the age and land in which they lived.

*** G. P. PUTNAM'S SONS have just published two important Catalogues:

I. A New General Catalogue of their own Publications.

II. A Special Catalogue of their Retail Department, containing the choicest stock of English and American publishers.

Houghton, Mifflin & Co.'s

NEW AND HOLIDAY BOOKS.

Poems of Nature.

By John G. Whittier. A Notable Holiday Volume. Illustrated with Fifteen full-page Engravings from Nature by Elbridge Kingsley, and containing a superb Etched Portrait of Mr. Whittier. Quarto, tastefully bound, cloth, $6.00; full Persian levant, with cover design in antique and gold, $12.00; full polished calf, tree panel inlaid, with sprinkled border, a new and elegant style, $15.00.

The Last Leaf.

By Oliver Wendell Holmes. A Holiday Volume, quite out of the common range. Contains the Poem in facsimile of Dr. Holmes's writing, illustrated with Twenty-four full-page designs, and many charming dec.-rative drawings, by F. Hopkinson Smith and George W. Edwards. Quarto, beautifully bound. $10.00.

Old Lines in New Black and White.

Twelve fine large Charcoal Sketches (about 12 inches by 15), by F. Hopkinson Smith, illustrating lines of Whittier, Holmes, and Lowell. Reproduced by the Photo-type process with admirable effect. Bound or in portfolio, $12.00.

Life and Letters of Louis Agassiz.

By Elizabeth C. Agassiz. With Portraits and several illustrations. 2 vols. crown 8vo, $4.00.

"In its method this biography is worthy of all praise. As far as possible the story is told by Agassiz's own letters. The thread of narration which binds them together is delightfully simple and direct."—*Boston Advertiser.*

Poets of America.

By Edmund Clarence Stedman, author of "Victorian Poets," etc. 1 vol. crown 8vo, gilt top, $2.25.

Contents: Early and Recent Conditions: Growth of the American School; William Cullen Bryant; John Greenleaf Whittier; Ralph Waldo Emerson; Henry Wadsworth Longfellow; Edgar Allan Poe; Oliver Wendell Holmes; James Russell Lowell; Walt Whitman; Bayard Taylor; The Outlook.

Studies in Shakespeare.

By Richard Grant White, author of a "Life of Shakespeare," "Words and their Uses," "England Without and Within," etc. Uniform with "Words and their Uses;" also uniform with the Riverside Edition of Shakespeare. 1 vol. crown 8vo, $1.75.

This volume contains the ripe results of years of study, and its insight, thoughtfulness, and vigorous sense render it a valuable contribution to Shakespeare literature.

The First Napoleon.

A Sketch, Political and Military. By John Codman Ropes, member of the Massachusetts Historical Society. With Maps. 1 vol. crown 8vo, $2.00.

"There is an endless fascination in the life of the first Napoleon. When the wonderful story is told so vigorously and so effectively as it is by Mr. Ropes, no amount of familiarity can dull the reader's interest."—*Boston Daily Advertiser.*

A Mortal Antipathy.

The First Opening of the New Portfolio. By Oliver Wendell Holmes. 12mo, gilt top, $1.50.

A very engaging book, including a thoroughly interesting story, with chapters of personal reminiscences, full of wise and curious thought, brilliant in fancy and in wit.

The Prophet of the Great Smoky Mountains.

By Charles Egbert Craddock, author of "In the Tennesee Mountains," "Down the Ravine," etc. 16mo, $1.25.

"We have a right to say that a genius like George Eliot has appeared in Charles Egbert Craddock. . . . This is the most perfect of this author's works. To the lover of literary art nothing more alluring and delightful has appeared on either side of the Atlantic."—*The Churchman* (New York).

Italian Popular Tales.

By T. F. Crane, Professor of the Romance Languages and Literatures in Cornell University. 1 vol. 8vo, $2.50.

A book of curious interest, like Grimm's German Tales, containing over a hundred Fairy Tales, Tales of Oriental origin, Legendary Tales, Nursery Tales, and Jests, collected from all parts of Italy. Equally interesting to young folks and their parents.

The Idea of God as Affected by Modern Knowledge.

By John Fiske, author of "Myths and Myth-Makers." 16mo, $1.00.

This is a sequel to "The Destiny of Man," which appeared last year, and produced so profound an impression. Its object is to show that the indications of Science and Philosophy are not atheistic, but that, while the idea of God has been greatly modified by modern knowledge, it has been very much expanded and illuminated.

GINN & CO., Publishers,

Boston, New York, and Chicago.

Social Silhouettes,

Edgar Fawcett's brilliant and piquant record of Mr. Mark Manhattan's New York sights and experiences, shows up all the follies and oddities of metropolitan society with a pen of light. The New York *Tribune* says: "Never have our social frivolities and shams been scourged with a more cutting lash."

"Admirable and piquant sketches and novelettes of New York life and society, rich in original types and vivid portrayals. Fawcett is one of the best of our younger novelists."—*Beacon.*

The Haunted Adjutant,

And Other Stories. By Edmund Quincy. Edited by his son, Edmund Quincy. 12mo, $1.50.

"In all these stories there are the refinement, the fancy, the dainty handling, and the intrinsic elegance that marked all of Mr. Quincy's work."—*The Beacon.*

English Home Life.

By Robert Laird Collier. 16mo, $1.

A vivacious account by a keen and popular observer. The themes are: "House and Home," "Mistress and Maid," "Courtship and Marriage," "Food and Cooking," "Manners and Customs," "Church and Religion," "Parents and Children."

Mr. Howells's Poems.

16mo. Printed on imported hand-made paper, fine parchment covers, $2.00.

The beautiful poems of the foremost of American novelists are here presented in a new edition, with the addition of 100 pages of new matter, including "Pordenone," the rhymed romance of "No Love Lost," and the charming pastoral story of "Bo-Peep."

A Narrative of Military Service.

By Gen. W. B. Hazen. 1 vol., 8vo. With Maps, Plans, and Illustrations. $3.00.

"Gen. Hazen has sounded a loud challenge in the ears of the military men of his time."—*Boston Herald.*

"Gen. Hazen's volume is an entertaining one. It contains a good deal of humor, though its author has evidently written in anything but a humorous mood."—*Boston Traveller.*

"The manly tone, strong good sense, and historical and military value of Gen. Hazen's book will be conceded by every reader."—*Cincinnati Com. Gazette.*

"His narrative describes with all the vivid feeling of a participant in stirring events, and all the valuable detail."—*N. Y. World.*

In Camp and Battle with the Washington Artillery

Of New Orleans. By Wm. Miller Owen, Lieutenant-Adjutant, B.W.A. 8vo, with maps and engravings, $3.00.

"A record of Southern valor. . . . The battalion was under fire in 60 battles and minor engagements. . . . It is a spirited record of personal experience and adventure; all the camp jokes and stirring episodes are reproduced, and the reader seems to be living again in war times, and to be breathing the smoke of the battle-field."—*N. Y. Tribune.*

"Strikingly good. It will be read through with continuous interest, for it affords a faithful view of many great battles from the standpoint of an organization that was generally in the thick of the fight."—*Cincinnati Com. Gazette.*

PREBLE'S HISTORY OF THE FLAG of the United States. Royal 8vo. 815 pages. 240 pictures. $7.50.

"A magnificent classic of American patriotism."

STEVENSON'S THE BATTLE OF Stone's River.

DODGE'S BIRD'S-EYE VIEW OF THE Civil War.

*DODGE'S CAMPAIGN OF CHANCEL*lorsville.

PENINSULAR CAMPAIGN OF GEN. McClellan.

Each in 1 vol., 8vo. With maps. $3.00.

☞ *Sold by all booksellers. Sent, postpaid, on receipt of price by the publishers,*

Ticknor & Co., Boston.

Littell's Living Age.

IN 1886, THE LIVING AGE enters upon its forty-third year, having met with continuous commendation and success.

A WEEKLY MAGAZINE, it gives fifty-two numbers of sixty-four pages each, or more than

Three and a Quarter Thousand

double-column octavo pages of reading-matter yearly. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a completeness nowhere else attempted.

The best Essays, Reviews, Criticisms, Serial and Short Stories, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature, and from the pens of the

Foremost Living Writers.

The ablest and most cultivated intellects, in every department of literature, science, politics, and art, find expression in the Periodical Literature of Europe, and especially of Great Britain.

THE LIVING AGE, *forming four large volumes a year*, furnishes, from the great and generally inaccessible mass of this literature, the only compilation that, while within the reach of all, is satisfactory in the completeness with which it embraces whatever is of immediate interest, or of solid, permanent value.

It is therefore indispensable to every one who wishes to keep pace with the events or intellectual progress of the time, or to cultivate in himself or his family general intelligence and literary taste.

OPINIONS:

"Hardly elsewhere in the English language, and certainly in no other written speech, are such treasures of literature to be found as in the *Living Age*."—*New York Evangelist.*

"Nearly the whole world of authors and writers appear in it in their best moods. The reader is kept well abreast of the current thought of the age."—*Boston Journal.*

"It is not too much to say that with it one commands the whole field of current literary activity; and it has never been so bright, so comprehensive, so diversified in interest as it is to day."—*Evening Traveller, Boston.*

"It has now for many years held the first place of all our serial publications. . . . There is nothing noteworthy in science, art, literature, biography, philosophy, or religion that cannot be found in it. . . . It contains nearly all the good literature of the time."—*The Churchman, N. Y.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New York Tribune.*

"It enables its readers to keep fully abreast of the best thought and literature of civilization."—*Christian Advocate, Pittsburgh.*

"No person who desires to keep pace with the development of modern thought can afford to dispense with it."—*Am. Christian Review, Cincinnati.*

"Biography, fiction, science, criticism, history, poetry, travels, whatever men are interested in, all are found here."—*The Watchman, Boston.*

"Through its pages alone it is possible to be as well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"In fact, a reader needs no more than this one publication to keep him well abreast of English periodical literature."—*Sunday School Times, Philadelphia.*

"Foremost of the eclectic periodicals."—*N. Y. World.*

"In subscribing for it, our readers will secure more for their investment than in any other way of which we are cognizant."—*Iowa Churchman, Davenport.*

"Coming once a week, it gives, while yet fresh, the productions of the foremost writers of the day."—*Montreal Gazette.*

"One cannot read everything. . . . No man will be behind the literature of the times who reads the *Living Age*."—*Zion's Herald, Boston.*

"It furnishes a complete compilation of an indispensable literature."—*Chicago Evening Journal.*

"It saves not only time, but money."—*Pacific Churchman, San Francisco.*

"The best publication we know in the world."—*Morning Star, Wilmington, N. C.*

Published WEEKLY at $8.00 a year, *free of postage.*

☞ TO NEW SUBSCRIBERS for the year 1886, remitting before Jan. 1, the numbers of 1885 issued after the receipt of their subscriptions will be sent *gratis.*

Club Prices for the Best Home and Foreign Literature.

["Possessed of the *Living Age* and one or other of our vivacious American monthlies, a subscriber will find himself in *command of the whole situation.*"—*Philadelphia Eve. Bulletin.*]

For $10.50 the *Living Age* and any one of the American $4 Monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year, *postpaid;* or for $9.50 the *Living Age* and the *St. Nicholas.*

Address, LITTELL & CO., Boston.

'Prose Masterpieces from Modern Essayists' are three charming volumes, showing admirable judgment on the part of the editor. These contain single specimen essays of Irving, Leigh Hunt, Lamb, De Quincey, Landor, Sydney Smith, Thackeray, Emerson, Arnold, Morley, etc., etc. The set presents not only specimens of the best English style, but the methods of thought and characteristic modes of expression of the several writers. 3 vols., beautifully printed, $3.75, $4.50, and $10. G. P. PUTNAM'S SONS, Publishers, New York.

A Bibliography of History.

Chronologically arranged, embracing the best English books and Selected Magazine articles, forms part of the new Labberton's Historical Atlas with Text, 141 Maps, cloth, $2.00.

THIRTY NEW MAPS ON

Early England.

(1—1070, A. D.)

Maps never before published, as no historical Atlas has had heretofore more than three maps on this period. Every Student of English History will consider them a priceless acquisition. There has been no such history of this period as these object lessons teach. They are to be found in the new Labberton's Historical Atlas with Text, 141 Maps, cloth, $2.00.

An Historical Atlas.

WITH TEXT AND BIBLIOGRAPHY.

By ROBERT H. LABBERTON.

Royal 8vo, 141 MAPS, cloth, $2.00.

The text, a marvel of condensation, gives, in an attractive narrative form, just what general readers most wish to know. The Bibliography is an aid to those who wish to work out for themselves in greater detail any special line of investigation. The Maps form the most complete atlas ever made; embracing at a small cost what otherwise can be had only in the purchase of several large and costly atlases and sets of standard histories.

"Even though a man has the great work of Spruner, ($50.00), he will find Labberton's book a very useful supplement to it."—*Hon. Andrew D. White.*

Townsend MacCoun,

744 Broadway, New York.

ROBERTS BROTHERS'

THE MANHATTAN

Life Insurance Company.

156 and 158 BROADWAY,

NEW YORK.

"I MUST DIE TO WIN."

This is a common expression, one used perhaps most frequently as an objection to the ordinary life plan. "It is an excellent form of provision for the family, but I must die to win."

YOU MAY LIVE AND WIN.

This refers to the Endowment plan, which meets the above objection. Take, for instance, a policy payable to yourself 10, 15, or 20 years hence. Say you die before the termination of the period: *your family wins.* You survive the period: the policy becomes at once a provision for your own advancing years. *You have lived and won.*

The "MANHATTAN'S" New Plan meets the case.

For example of its operation address the Company, giving your age.

NO. SEVENTY-EIGHT.

THE

INTERNATIONAL CYCLOPEDIA.

In the course of their experience as booksellers the present publishers have again and again been asked by their customers, "Which

IS THE BEST

Cyclopedia for general use?" After careful investigation of various works of the kind they were compelled for years to answer: "While all have their merits, no one work seems to combine all the requisites, but upon the whole we think Chambers's the best

AND MOST USEFUL

for general reference." When in 1880-81 the Library of Universal Knowledge was published, containing Chambers's Encyclopædia complete, with the extensive additions of the American editors, we were able to commend it as very superior, except in mechanical qualities. A year ago we purchased the plates of that

WORK

and have since corrected errors and fully revised it to the present year. We have besides added over 2,000 new articles, and the work now has 20,290 of these by American editors, and in all 49,646 distinct titles. There are also numerous fine maps and 150 double-page engravings. These contain over 3,000 separate figures, and there are some 500 in the text besides. We now confidently offer the work as the best

FOR POPULAR USE.

Its chief merits are: Comprehensiveness—Conciseness—Latest Information—Cheapness. It is issued complete in 15 royal octavo vols., and contains 13,296 pages. It is sold by subscription exclusively, at $3 per vol. in cloth, $4 in library sheep, and $5 in half Turkey morocco. For fuller information, send for descriptive circulars. First-class agents wanted.

DODD, MEAD & COMPANY, Publishers,
NEW YORK.

The History of Bimetallism in the United States.

By J. LAURENCE LAUGHLIN, Ph.D., Assistant Professor of Political Economy in Harvard University; author of 'The Study of Political Economy,' etc. With Sixteen Charts and numerous Tables. One vol., 8vo, 258 pages, cloth. Price, $2.25.

"Although the plan of this book was conceived with the view of presenting simply a history of bimetallism in the United States, it has been necessary, in the nature of the subject, to make it something more than that. And yet it was my hope that the effect of an historical inquiry in suppressing some of the theoretical vagaries of the day might be realized by showing what our actual experience with bimetallism has been, in contrast with the assertions of some writers as to what it may be."—*From Preface.*

D. APPLETON & CO., Publishers,
1, 3, and 5 Bond Street, New York.

French Student Self-Instructor
AND
Ready-Speaker Assistant.
By ALFRED SARDOU.

CARL SCHOENHOF, Publisher,
144 Tremont Street, BOSTON.

The only work that gives the perfectly exact pronunciation for *EVERY* French word and sentence, represented by English sounds and letters, enabling any one, without the slightest knowledge of French, *to carry on a Conversation*, pronouncing with *a pure accent and correct intonation.*

This Work will save you Time, Labor, and Money.

FOR SALE BY ALL BOOKSELLERS.

You can obtain almost any book at 20 PER CENT. DISCOUNT, POST-PAID, until January 1, from William R. Jenkins, Publisher and Bookseller, 850 6th Ave., N. Y. Bargain Catalogue or Catalogue of French books free. Information furnished. Holiday Catalogue with over 100 beautiful illustrations, 10 cents.

FOREIGN AND AMERICAN PERIODICALS. B. WESTERMANN & CO., 838 Broadway, New York. Lists gratis on application. Lowest prices.

THE CENTURY for DECEMBER

CONTAINS:

FIVE ILLUSTRATED ARTICLES,

"The City of Teherân," by S. G. W. Benjamin; "An American Lordship," by G. P. Lathrop, "The Monitors," by Captain Ericsson; "The 'Lamia' of Keats," and

A "WAR PAPER," by MARK TWAIN.

The latter, entitled "The Private History of a Campaign that Failed," is an account of the author's personal experiences as a youthful "rebel" early in the war. It is illustrated by Kemble and accompanied with "maps and plans" by the author. The article on the Monitors by their inventor, Captain Ericsson, is accompanied with a paper on "The Loss of the Monitor" by a Survivor. The fiction includes

TWO SHORT STORIES

by H. H. Boyesen and T. A. Janvier, and chapters of Mrs. Mary Hallock Foote's novel, "John Bodewin's Testimony," begun in November.

OTHER CONTRIBUTIONS

are "Dangers in Food and Drink," a paper on Helen Jackson (H. H.), with frontispiece portrait and her last poems; "Bird-Enemies," by John Burroughs; "The Lesson of Greek Art," by Charles Waldstein; "Our Ex-Presidents," by Senator Edmunds and others; "Faith-Cures," etc.

Price, 35 cents; $4 a year. New subscribers beginning with November can get through dealers or the publishers the twelve numbers of the past year, to the beginning of the War Series, and a year's subscription, *for $6 for the whole.* The same numbers, bound in two volumes, with subscription, $7.50. THE CENTURY CO., N. Y.

79 William St., New York.

Of 'The Story of Rome,' by Arthur Gilman, just published by Messrs. Putnam, a competent critic says: "Mr. Gilman has seen clearly and presented strongly the salient features of Roman life and character, and in a delightful form has succeeded in conveying an impression of the nature and quality of the work which the Romans did for civilization." The volume (which is the second in the series of "Stories of the Nations") is beautifully printed and fully illustrated. $1.50. G. P. PUTNAM'S SONS, Publishers, New York.

The Nation

VOL. XLI.—NO. 1067. THURSDAY, DECEMBER 10, 1885. PRICE 10 CENTS

AN ENTIRELY NEW EDITION OF

LORD BYRON'S

CHILDE HAROLD,

With numerous new and beautiful illustrations on wood. An elegant octavo volume of nearly 250 pages, beautifully bound, with full gilt edges, in box. Price, in cloth, $6; in antique morocco or tree calf, $10; in crushed levant, with silk linings, $25.

"Given our choice between this poem and any other poem published during the present season, we should give the others the go-by and select this one as one of the noblest and greatest poems in the whole range of English poetry. The illustrations in this beautiful edition are conceived and executed in the good old-fashioned, manly style that characterized the best days of drawing and engraving. Taken as a whole, the effect they have upon the mind is one of simple, serene loveliness. They should be studied, as 'Childe Harold' should be read, over and over again."—*R. H. Stoddard, in New York Mail and Express.*

The Choicest Editions of the Four Great Modern Poems.

Uniform with "Childe Harold" in style and price.

The Princess.

Tennyson's most famous poem. With 120 illustrations.

"The most superb book of the season. The exquisite binding makes a fit casket for Tennyson's enchanting 'Princess.'"—*Hartford Journal.*

The Lady of the Lake.

A superb Fine Art Edition, with 120 illustrations of Scott's wonderful poem of Scottish chivalry.

"On page after page are seen the great dome of Benan rising in mid-air, huge Ben-venue throwing his shadowed masses upon the lakes, and the long heights of Ben Lomond hemming the horizon."—*Atlantic Monthly.*

Lucile.

By OWEN MEREDITH. With 100 illustrations.

"This new edition is simply perfect—paper, type, printing, and especially the illustrations—a most charming Christmas gift."—*American Literary Churchman.*

Marmion.

With more than 100 illustrations and Borders.

"Wild Scottish beauty. Never had a poem of stately and immortal beauty a more fitting setting."—*Chicago Inter-Ocean.*

Ticknor & Co., Boston.

You can obtain almost any book at 20 PER CENT. DISCOUNT, POST-PAID, until January 1, from William R. Jenkins, Publisher and Bookseller, 850 6th Ave., N. Y. Bargain Catalogue or Catalogue of French books free. Information furnished. Holiday Catalogue with over 100 beautiful illustrations, 10 cents.

The Atlantic Monthly

FOR 1886

Will contain the following Serial Stories:

IN THE CLOUDS,

By CHARLES EGBERT CRADDOCK,

Author of 'The Prophet of the Great Smoky Mountains,' 'In the Tennessee Mountains,' etc.

HENRY JAMES.

['The Princess Casamassima' will continue until August, 1886.]

THE GOLDEN JUSTICE.

By WILLIAM H. BISHOP,

Author of 'The House of a Merchant Prince."

JAMES RUSSELL LOWELL

Will write for the ATLANTIC MONTHLY for 1886.

JOHN FISKE

Will contribute six or more papers on United States History, covering the period from the Revolution to the adoption of the Constitution. These papers discuss a portion of American history very imperfectly known, and cannot fail to be exceedingly engaging by reason of Mr. Fiske's ample knowledge and singularly clear style.

PHILIP GILBERT HAMERTON,

The distinguished English writer, will furnish a series of articles comparing French and English people, character, opinions, customs, etc. Mr. [illegible]erton is peculiarly qualified, by his intimate knowled[illegible]he French as well as of his fellow-countrymen, to w[illegible]his subject.

THOMAS BAILEY A[illegible],

Author of 'Marjorie Daw,' etc., will contribute some Short Stories.

LIVING QUESTIONS.—The important political subjects which will come conspicuously before the public in the immediate future—Civil-Service Administration and Reform, the Silver Question, the Tariff, our Indian Policy, and questions in Social Science—will be discussed by men competent to treat them adequately and impartially.

The various features of THE ATLANTIC which have secured and maintained its remarkable prestige as a literary magazine will be carefully provided for during the coming year.

TERMS: $4 00 a year in advance, POSTAGE FREE; 35 cents a number. With superb life-size portraits of Hawthorne, Emerson, Longfellow, Bryant, Whittier, Lowell, or Holmes, $5 00; each additional portrait, $1 00.

Postal Notes and Money are at the risk of the sender, and therefore remittances should be made by money-order, draft, or registered letter, to

Houghton, Mifflin & Co.,

4 Park Street, Boston, Mass.

A GENERAL HISTORY.

By MARY D. SHELDON, formerly Professor of History in Wellesley College.

AN APPLICATION OF THE SCIENTIFIC METHOD TO THE TEACHING OF HISTORY.

Gives a collection of historic material, which may be dealt with first-hand, as the pupil deals with the actual substance in chemistry, thus stimulating not only memory, but observation, judgment, and generalization. This material consists of maps, pictures, lists of important events, men, works, and deeds, tables of political organizations, and extracts from original sources, including constitutions, creeds, laws, chronicles, and powers. It is accompanied by questions of the nature of problems to be worked out by the pupil from the given data.

What we Really Know about Shakespeare.

By Mrs. Caroline Healey Dall. 12mo, Cloth. Price, $1.25.

There is no Life of Shakespeare accessible to the public at a moderate cost and of a convenient size, which gives any of the last results of the inquiry into his life and circumstances. A very great addition to our knowledge of these has accrued from the labors of Mr. Halliwell Phillips and others. It has been Mrs. Dall's intention to put these results into an entertaining narrative, accompanied by references to documents and authorities which will sustain it, and in a shape suited to the library as well as to the use of colleges and universities, and private classes in English literature.

Time Flies:

A Reading Diary for Every Day in the Year. By Christina G. Rossetti. 16mo, Cloth, red edge, $1.00.

A new and entirely original book by this popular author, a mingling of both prose and poetry, the latter of a very high order of merit.

Sold everywhere by all booksellers. Mailed, postpaid, by the publishers,

ROBERTS BROTHERS

Boston.

Have You a Collection of Books?

The Library Catalogue and Index is intended for private collections. It is arranged so that any book can be entered under author and title of work. Highly approved by those who have used it. The Library Catalogue and Index is handsomely bound and lettered in one volume, quarto (6¾x8½ inches), made of the best paper, and will be mailed, post-paid, to any address on receipt of $2.50 by the publishers,

SHEPARD & JOHNSTON, 146 Monroe St., Chicago, Ill.

To the person receiving this as a Specimen Copy:

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on leading questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign, together with a Summary of the Week's News in six columns of brief paragraphs.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Your subscription is invited. To new readers who desire a better acquaintance with the paper than can be had from examination of a single copy, the *Nation* will be sent for two months at half rate—25 cents. (See blank on page ix.)

Terms, $3 per annum, postpaid. Address

THE NATION, 210 Broadway, New York.

Recent Press Comments on "The Nation."

"With the publication of No. 1043, our New York contemporary, the *Nation*, completes the twentieth year of its existence. Many changes have occurred since the *Nation* first appeared as an independent political and literary journal, not the least important being the improvement effected by its precept and example in political and literary criticism across the Atlantic. We trust that many years of life and usefulness are still in store for our esteemed contemporary."—*London Athenæum.*

"We have often had occasion to differ widely with the *Nation*; but its intelligence, its courage, and the great service it has rendered to purity and independence in public life, have always received our heartiest recognition. The *Nation* has appealed especially to thinkers and students, and although its constituency of readers has been comparatively small, its influence has been out of all proportion to its circulation. Its success has been almost contemporaneous with the rise of a new school of thinkers on public questions in this country."—*Christian Union.*

"The New York *Nation* has just completed its twentieth year of usefulness, and righteously rejoices thereat. It has won a place for itself by its great ability; however much we may differ from it in politics, we must accord it the palm for a fine presentation of its case. As a critical authority in matters of art and literature, it is unapproached and unapproachable. No journal exists that is its superior—few, indeed, are they that equal it—in these departments or in the world-wide correspondence it publishes upon all matters of interest to the best thinkers."—*Hartford Evening Post.*

"It is not too much to say of the *Nation* that no single agency has done so much to advance and dignify the calling of journalism in America. Including in its scope politics as well as literature and art, it has often aroused bitter political antagonism and suffered from partisan excitement and prejudice; but we believe no one—at least, no one whose judgments are valued by thinking men—has ever soberly questioned its sincerity and disinterestedness, or the remarkable force and candor with which its views have been presented. In literary criticism its methods and achievements have been such that this has almost become a new art under its leadership. In all departments the *Nation* has been singularly able and impartial, and its success is a cause of gratification, in which American scholars generally will share."—*Chicago Dial.*

"In celebrating its twentieth anniversary, the New York *Nation* takes a natural pride in showing how often it has been right when many of its readers thought it was wrong. Doubtless the readers of the *Nation* have always been the most intelligent and upright members of the Republican party—the pick and choice of the whole 'party of moral ideas.' The depth to which that party had, as a mass, fallen in 1876 may then be guessed from the fact that the *Nation* says that in that year its opposition to the fraud by which Hayes was seated cost it three thousand of its subscribers. The *Nation*'s subscription list was never large, and, as we have said, it was always made up of the very best class of Republicans, three thousand of whom dropped the paper because it exposed and opposed a known crime against the Republic. Truly this is a party of moral ideas."—*Knickerbocker Rough Notes.*

"The *Nation* announces in its number of June 25 that it has completed the twentieth year of its existence, and it indulges itself in a two-page retrospect of its very useful work. Started just at the close of the war, it aimed to discuss political and social questions in more moderate fashion and with fairer spirit than was then common to the daily press. It was very frequently in advance of the Republican party in this course, and lost scores and hundreds of subscribers at times by its independent course, particularly in 1876, when it denounced the methods by which Mr. Hayes was declared President. The *Nation* has fairly fulfilled its promise, however, to be independent of party, and is respected accordingly by thinking people. Its art and literary criticisms have always been of a high order, and have helped to give it a national reputation as a weekly paper of the first class."—*Philadelphia Public Ledger.*

"The *Herald* welcomes the *Nation* to its table, as one of the ablest and most fearless exponents of the leading economic and political questions of the time. The splendid success of this journal, now starting upon its forty-first volume, is the clearest evidence that absolutely independent journalism has a large and steadily growing field in this country. And while the *Nation* has often been opposed and bitterly criticised on the alleged ground that its positions were the independence of a dictatorial spirit, it has yet more frequently had the satisfaction of seeing its short-sighted critics ultimately wheel into line with its advanced ideas on some of the most important questions that have arisen during its career. The astonishing progress which has recently been made in the way of viewing political questions is largely due to the *Nation*'s influence; and its projectors are entitled to the credit of 'having, through its columns, done something to hasten the coming of the better time, the reign of sweeter manners and purer laws.'"—*Council Bluffs Daily Herald.*

"During seventeen of the twenty years of the *Nation*'s publication we have been among its constant readers, and have found it unequalled among American periodicals for pungency of style, candor and accuracy of statement, and force and originality in the discussion of political events and social conditions. In the course of its long history the *Nation* has often taken the unpopular side in the treatment of current topics, but it has been its happy fortune to see its opinions in most cases confirmed by the sober second thought of the people. It was the first Northern journal of Republican leanings that denounced the carpet-bag governments which, supported by Federal bayonets, so long preyed upon the industries of the South, and inflamed and protracted the disunion sentiments of its people. It had the courage, amid much obloquy, to question the impeachment of Andrew Johnson, and it was ten years in advance of popular opinion in unmasking that scheming demagogue Benjamin F. Butler. . . . Justly regarding James G. Blaine as a corrupter of political morality, as a schemer, and as a charlatan, it refused to give him its support in the late Presidential contest, and it has since found abundant reason for approving, in the main, the practical wisdom and honest purposes of the present Administration. In commending to our readers this able and independent journal, we feel that we are doing a service to the cause of public intelligence and morality."—*Portland (Oregon) Daily Standard.*

"Twenty years old" on July 1, and the *Nation* hugs itself with rightful self-respect as it announces the fact and reviews its past. We count ourselves happy in owning a nearly perfect set of the *Nation*—happy because from the close of the war till now it makes the best continuous record of contemporaneous history which our country has produced. One of the works on a young man's bookshelves should be the carefully-kept volumes of the best weekly newspaper he can afford. The growing series is his current cyclopædia, his public diary—*his* because it chronicles the yesterdays in which he lives. And heartily we name the *Nation* as, on the whole, our readiest, ablest, most trustworthy newspaper diary of the world's life and the nation's life and the world's and the nation's literature. It has been a great teacher; never popular, but very influential as a paper for editors, and lawyers, and politicians. Probably many a bright journal through the country has regularly watched the *Nation* as a compass. A strong, bold defender of the policies that have made for noble peace these twenty reshaping years, it has had the faults of its good qualities; comically omniscient almost always; holding its head high; seldom gracing itself with a confession of mistake; sometimes savage in its stamp on a poor sinner of a book; not heartless, but certainly polar in its manner; afraid of sentiment, and forgetful that cynicism is sentimentalism of rather a young man's, or an old man's, sort—it does not belong to the strongest years. But spite of all this, our clear-headed, outspoken, little-fearing, best newspaper. Twenty years of thanks to it, and twenty more of hopes."—*Chicago Unity.*

GIFT BOOKS FOR THE HOLIDAYS.

Lamia.

By John Keats. With Illustrative Designs by Will H. Low. A superb quarto printed on plate paper 12x16 inches, and containing Forty Reproductions in Photogravure from Original Drawings. Handsomely bound in extra cloth, $15.00. Elegantly bound in Japanese silk, $25.00.

"It is a truly beautiful volume, fit to lie on a queen's table and have its leaves turned over by her royal hands."—*Oliver Wendell Holmes.*

"In these forty drawings there are necessarily different degrees of merit; but the best ones are of a very high order indeed, and the set, taken as a whole, could hardly be excelled, if equalled, by any set of book illustrations ever published. . . . But it is useless to particularize where there is so much that is admirable."—*N. Y. Nation.*

"Mr. Low has produced a series of delicate, graceful, and pure pictures, on which any artist and any people may look with pride."—*The Century.*

The Hermit.

A Ballad. From Oliver Goldsmith's 'Vicar of Wakefield.' Illustrated with Engravings from 12 Full-paged Paintings by Walter Shirlaw and a number of smaller designs in the text, the whole engraved on wood by Fred. Juengling. 48 pages. Printed on plate paper. Uniform in size with the Artists' Edition of 'Gray's Elegy.' Handsomely bound in cloth, gilt edges, $3.00; alligator, $3.50; morocco, new style, $4.50; tree calf, extra, $7 50.

In preparing this series of pictures for the beautiful and familiar ballad from 'The Vicar of Wakefield,' Mr. Shirlaw has aimed to make his work tell the story of itself, as an accompaniment to, rather than a necessary part of, a poem whose popularity is so fully established without such embellishment.

Mr. Juengling, being in the fullest sympathy with the painter, has rendered his designs with a degree of excellence that will place this work among the foremost achievements of wood engraving.

Lippincott's Biographical Dictionary.

A New, Thoroughly Revised, and Greatly Enlarged Edition. A Universal Pronouncing Dictionary of Biography and Mythology. Containing Memoirs of the Eminent Persons of all Ages and Countries, and Accounts of the Various Subjects of the Norse, Hindoo, and Classic Mythologies, with the Pronunciation of their Names in the Different Languages in which they occur. By Joseph Thomas, M.D., LL.D. In one Imperial 8vo Volume, containing 2550 pages and several thousand new names. Sheep, $12.00; half turkey, $15.00; half Russia, $15.00.

Our Young Folks' Roman Empire.

By Wm. Shepard. Uniform with "Young Folks' Plutarch" and "Josephus." 8vo. With Illustrations. Extra cloth, gilt, $2.50.

"An admirable piece of literary and historical work. It is not merely a story told for the sake of giving amusement, but it shows the reasons of Rome's fall in a way that appeals to a bright youth and at the same time leaves a moral lesson. It may be wisely used in connection with the ordinary school studies."—*Philadelphia Press.*

Young Folks' Queries.

A Story. By Uncle Lawrence. Cabinet 4to. Fully Illustrated. Uniform with "Young Folks' Ideas" and "Young Folks' Whys and Wherefores." Extra cloth, gilt, $2.00.

This volume, like its predecessors, "Young Folks' Whys and Wherefores" and "Young Folks' Ideas," presents in the form of a story, written in a simple and pleasing style, a great deal of useful and interesting information.

Through Spain.

A Narrative of Travel and Adventure in the Peninsula. By S. P. Scott. Profusely Illustrated. Small 4to. Handsomely bound in cloth, gilt top, and rough edges, $5.00.

Mr. Scott's familiarity with Spanish history, his appreciation of the beautiful scenery of this fascinating land, and close observation of the present manners and customs of the people, together with his unusual powers of description, assisted by the many elegant engravings, combine to make this one of the most delightful books of travel recently published.

The Queen's Empire;

Or, Ind and Her Pearl. By Joseph Moore, Jr., F.R.G.S., author of 'Outlying Europe and the Nearer Orient.' Illustrated with 50 Phototypes selected by George Herbert Watson. Crown 8vo. Appropriately bound in extra cloth, gilt top, $3.

"An exceedingly attractive volume, handsomely illustrated with 50 photographs and a map of India. Mr. Moore is evidently a geographical student as well as a keen observer of men and institutions. His book, therefore, is more than a description of the peoples and countries which he has visited. His observations are of great interest."—*N. Y. Herald.*

"One of the handsomest volumes of travel published this year. The author is felicitous in his descriptions, and understands how to select incidents and objects which will specially entertain the reader. It is altogether a charming and entertaining volume of narrative."—*Cincinnati Times-Star.*

Horse and Man.

Their Mutual Dependence and Duties. By the Rev. J. G. Wood, M.A., author of "Homes Without Hands," etc. With Illustrations. 8vo Extra cloth, $2.50.

"This is the title of a new and quite elegant book by the well-known author, Rev. J. G. Wood, who is a naturalist of no mean attainments, and is qualified to throw much interesting and valuable light on the care of horses; for army officers, farmers, veterinary surgeons—indeed, for all who own a horse or have to look after one—this book will be an excellent and scientific guide. The elucidation of the subjects treated is so clear, the physiology of the horse is so accurately described and the economic feeding, care and management of the animal are so well stated that the book would interest almost any reader."—*New York Herald.*

The Golden Treasury Calendar.

An Elegant Design. By Will H. Low. Chromo-lithographed in 22 Printings on cardboard 10x14 inches. With a Tablet containing appropriate Selections from Palgrave's 'Golden Treasury' for each day of the year. $1.

On Both Sides.

By Miss Fanny Courtenay Baylor. Containing 'The Perfect Treasure' and 'On This Side,' the whole forming a complete story. 12mo, extra cloth, $1.25.

"No such faithful, candid, kindly, brilliant, and incisive presentation of English and American types has before been achieved. The wit of the story is considerable. It is the best international novel that either side has hitherto produced. It is written by an American woman who really knows both countries, and who has shown that she possesses powers which ought to put her in the front rank of fiction."—*New York Tribune.*

Aurora.

A Novel. By Mary Agnes Tincker, author of 'The Jewel in the Lotus,' etc. Illustrated. 12mo, extra cloth, $1.25.

"A novel of extraordinary power and merit. One of the most powerful parts of the book is that in which the earthquake at Ischia is described. But other parts are as beautiful as genuine word-painting could make them."—*Hartford Courant.*

The Lady with the Rubies.

A Novel. From the German of E. Marlitt, author of 'The Old Mam'selle's Secret,' 'The Second Wife,' 'The Bailiff's Maid,' etc. Translated by Mrs. A. L. Wister, translator of 'A Penniless Girl,' 'Vain Forebodings,' etc. 12mo. Bound in extra cloth, uniform with her other translations, $1.25.

"It is worth reading."—*New York Tribune.*

"A pleasing, natural story of German life, translated with much fidelity by Mrs Wister."—*Philadelphia Evening Call.*

Here and There in Our Own Country.

Embracing Sketches of Travel and Descriptions of Places, etc. By Edmund Kirke, Louise Seymour Houghton, William H. Rideing, and other eminent writers. This charming volume of sketches includes graphic descriptions of the Catskill and Rocky Mountains, On the French Broad, Among the Florida Lakes, Life in Texas and Virginia, together with articles on places of interest in various parts of our country. Elegantly illustrated with 127 Engravings. Extra cloth, gilt, $2.50. Full morocco, new style, gilt edges, $4 50.

*** For sale by all Booksellers, or will be sent, free of expense, on receipt of the price by*

J. B. LIPPINCOTT COMPANY, Publishers, 715 and 717 Market St., Philadelphia.

The Nation.

NEW YORK, THURSDAY, DECEMBER 10, 1885.

The Week.

THE lengths to which partisanship will carry men have seldom been more forcibly illustrated than in the action of the Republican Senators on Friday. They were called upon to select a candidate for President pro tempore of their body. The ordinary duties of that position require that its incumbent shall be a man who possesses marked qualifications as a presiding officer—in other words, that he shall be familiar with the general rules of parliamentary procedure and with the special rules of the Senate, be impartial in their application, and dignified in his bearing. At the present time the place derives an exceptional importance from the fact that if President Cleveland should die before Congress could pass a bill placing the succession in the Cabinet, where it properly belongs, the President pro tempore of the Senate would become acting President of the United States for over a year, pending a new election. This possibility demanded that the Republican who might thus become acting President for a considerable portion of a term which the people intended to have filled throughout by a Democratic Executive, should be a man whose character gave assurance that he would confine his incumbency of the White House to a discharge of the routine duties and a maintenance of the political *status quo*.

So far as the first part of the case is concerned—the choice of a man to occupy the chair of presiding officer of the Senate—it is simple truth to say that the body contains no man more signally disqualified for the place, by unfamiliarity with parliamentary methods and by infirmities of temperament, than John A. Logan. The idea that the Illinois Senator was the man best fitted to preside over them never occurred to his Republican colleagues in all the years that he has been in the Senate, during which they have been called upon so often to name a President pro tempore. Under ordinary circumstances, they would have admitted to each other that one might as well put a bull in a china shop. Under the present extraordinary circumstances, his unfitness for a place which has the greatest potentialties is still further emphasized. Of all the Republican Senators there is not one whose political record would make his temporary accession to the Presidency a severer shock to the country, not one upon whom the spoils-seeking members of his party would so confidently rely to revolutionize the administration if he came into control of them for a year. In short, no stronger incentive could be offered to another Guiteau than the knowledge that the murder of Cleveland would mean the elevation of Logan. It seems almost incredible that the Republican Senators could have seriously proposed to make him President pro tempore, yet they were unanimous in offering him the place. It is greatly to Senator Logan's credit that he declined their offer. Whether he suspected the Blaincites thus ostentatiously bearing gifts, or whether, as has been reported, he believed that "Cleveland and Logan would not make a good ticket" in this emergency, he has done the country a service in refusing the place.

The Republicans of the House have made a very bad start by adopting a resolution in caucus declaring in favor of the unconditional repeal of the limitation of the payment on arrears of pensions, as well as in favor of still further extensions of the pension system. Both of these propositions are purely demagogical attempts to "capture the soldier vote," and their unquestioned adoption by the caucus indicates that many Republican Congressmen, now that they cannot be held responsible for the work of the House, will be found heartily supporting extravagant measures, the discredit for which, if they should prove unpopular, can be shifted upon the party which has the majority.

Presidents have often had great difficulty about keeping their messages out of the papers until they had been sent to the Capitol, but it was reserved for Mr. Cleveland to see somebody else transmit a message to Congress before the Chief Magistrate had a chance to get in his. Mr. Tilden despatched his last week under cover to Mr. Carlisle, and gave it to the papers by telegraph before the Speaker received it by mail. The Greystone ruler recommends that Congress shall do nothing to reduce the revenue by abolishing the whiskey tax; that there shall not be "excessive rapidity in the payment of the public debt," but that the surplus shall be employed in constructing coast fortifications upon a great scale, for which he makes a strong argument. Considering that Mr. Tilden was cheated out of a chance to send messages to Congress in the capacity of President from the White House, nobody will be hard-hearted enough to grudge him whatever satisfaction he may find in sending them in his capacity of Sage from the Hudson.

The report of the Secretary of the Treasury is a paper of unequal merit. It is impossible to resist the conviction that it is the work of more than one hand. Indeed, such reports are commonly made up in sections in different workshops, and put together by the chief architect, who has drawn the general plan. Supposing this custom to have been followed by Secretary Manning, we take leave to say that the joiner who prepared the eighteen pages on mono-metallism and bi-metallism, or, as he calls it, "Metallism—Mono and Bi," is a crank. A more dreary and baffling and unnecessary disquisition was never put in print. The terminology is painful and in places exasperating, and the reasoning laboriously intricate and obscure. Take this specimen:

"As metallists of both schools condemn all efforts by laws to manufacture a legal-tender equivalent of any nation's monetary unit out of the paper record of a promise to pay that unit, it here suffices to allude to that episode in our history before showing what the procedure of the Congress of the United States has been in making our monetary unit reside in coin, formerly of two metals, latterly in one metal, and the relation of the bi-metallic theory and practice thereto, and to our immediate problem, the silver-dollar coinage."

This is a struggle with the parts of speech to say that before showing what our monetary system is now, it is best to show what it has been heretofore. The excellent aim of this long-drawn argument, to secure a suspension of the silver coinage, does not justify the grotesque means employed to secure it. The last paragraph, under the sub-head, "A Poorer Dollar Reduces the Wages of Labor," goes far to redeem the seventeen pages which precede it, being written in plain English, with a clear conception of the fact that when money falls in value the prices of commodities rise, while wages remain stationary, and that consequently the working men are cheated.

Aside from this academic discussion, Secretary Manning's report is a clear, straightforward, and business-like document, which will compare favorably with those of his predecessors in office. His remarks on the tariff question are sound and just, and by no means extreme. They do not go beyond the recommendations of the Tariff Commission of 1882, but they insist that the interests of both foreign commerce and domestic industry demand that the impenetrable jungle of the present tariff, which requires separate examination and appraisement of 4,182 different articles, shall be cleared up into something like an intelligible system. The injustice of retaining duties which were enacted to compensate for internal taxes, twenty years after the internal taxes were repealed, is suitably commented on. "Some duties have been retained," he says, "after ruining the industries they were meant to advantage. Others have been retained after effecting a higher price for a domestic product at home than it was sold for abroad." These are gospel truths, and it may be hoped that the Secretary's report will carry them to the consciences of a great multitude of men who would otherwise never see or heed them. The Secretary recommends that the duties on raw materials be first dealt with, and that all changes be made with due regard to existing conditions, and due notice to the interests affected. In the internal-revenue branch of taxation he recommends that the same rule be applied to distilled spirits in bond that is applied to other merchandise in bond, viz., that the tax be collected only when the goods are withdrawn for consumption.

One of the oddities of the tariff literature drawn out by Secretary Manning's circular is a protest by Messrs. Finlayson, Bousfield & Co., of Scotland, through their agents in the United States, against any lowering of the duties on linen thread. These gentlemen are manufacturing thread at Johnstone, Scotland, and also at Grafton, Mass. They say that the duty on dressed flax, of which none is produced in the United States, is $40 per ton; that the duties on flax-spinning machinery, of which none is made in this country, are 35 per cent.,

and on the brass and steel parts thereof 45 per cent. ad valorem, and that, taking into consideration the high rate of wages, of building material, and of coal in the United States, it will be impossible to continue flax-spinning at Grafton if the duty on linen thread is reduced below 40 per cent. There are some statements in the protest that cannot be accepted without challenge, as, for instance, that buildings for manufacturing purposes cost 100 per cent. more in Massachusetts than in Scotland. But leaving out the exaggerations, and looking only at indisputable facts, what a comment does this petition supply on the protests of the Iron and Steel Association, and of the bulk of the protected interests, against any meddling with or discussion of the tariff question. The supposed object of the duty on linen thread is to build up that industry. By way of doing this thoroughly we clap on a tax of $40 per ton on their raw material, and 40 per cent. on their machinery, and 40 per cent. on imported thread, and then bid them God speed. In the course of a quarter of a century the linen trade is so far prospered and encouraged that a firm of Scotch spinners start a branch of their works in Massachusetts where they employ a few hands, and where their employees and their agents are struggling to make a precarious livelihood at the expense of all the seamstresses, shoemakers, and saddlers in the United States. What a noble spectacle must greet the eye of the visitor to Grafton when he contemplates this industrial triumph, and reflects upon the disproportion between the means employed and the end attained.

There has been a great deal of squirming among the protectionists, apropos of Mr. Joseph Chamberlain's statement concerning the annual subsidy once paid to him by screw manufacturers in the United States. A correspondent writes to us to say that the amount of the subsidy was $25,000 per year, though we believe the true figure to have been $50,000, and the Providence *Book Notes* intimates that while it was being paid the American Screw Company was making dividends of 10 per cent. a month. The Boston *Commercial Bulletin* is greatly disturbed by the discussion. In its issue of December 5 it goes so far as to affirm that "there has never been a duty of 100 per cent. upon screws." This it calls "the centre of the fabrication," and the "trunk lie" upon which all the other lies depend, although it does not deny the payment of the subsidy to Chamberlain. We have accordingly taken some pains to ascertain at the custom-house what the ad-valorem duties on screws have been. We find that prior to July 1, 1883, they ranged from 19 per cent. on the size ⅜x2 to 180 per cent. on the size 1¾x18, and that the average duty on a general assortment such as a hardware-dealer would commonly keep on hand was 110 per cent. The duties were slightly reduced by the tariff of 1883. If the Boston *Commercial Bulletin* wants a detailed statement of the ad-valorem duties on the various sizes, we are able to meet the demand.

A remarkable change in the popular significance of a very common word is strikingly illustrated by one of the current comments upon the late Vice-President. Newspaper admirers of Mr. Hendricks praise his honesty, and adduce as evidence of it the fact that, although long in public life, with numerous opportunities to enrich himself corruptly, "he died poor." At the same time, they publish as a matter of news the statement that he left an estate variously estimated at from $100,000 to $150,000. The tribute to his honesty is undoubtedly deserved, but what a queer transformation in the significance of terms it must seem to elderly people to call a man "poor" who is worth from $100,000 to $150,000. In the old days, and even as recently as when Mr. Hendricks was a boy, a man who had a tenth of a million dollars was commonly called a rich man, and it would have seemed utterly ridiculous to speak of him as poor. But in those times there were only a few millionaires in the whole country. Nowadays, with millionaires so common that the possession of tens of millions is required to distinguish a man for wealth, and when the late Mr. Vanderbilt's fortune is commonly estimated to approach two hundred millions, a person with a mere hundred thousand is not considered as a "man of property." But how strange it would have seemed to a boy who was born in a log cabin sixty or seventy years ago if anybody had told him that he would accumulate $100,000 or $150,000 before he died, and yet be generally spoken of as "a poor man."

Mr. S. Dana Horton contributes an article on the silver dispute to the *North American Review*, couched in language which ought to make it very attractive to that branch of the silver fraternity who are strong in the metaphysics of bi-metallism. What could be more alluring to a Texan economist than the following paragraph?

"A new phenomenon, the competition of India in wheat, and to some extent in cotton, at a low silver price, translated for gold countries into an artificially lower gold price, has invaded the monetary peace of Christendom—not merely with amounts imported, but through the specific draw on prices of a great potential supply—and so contributes a novel quota to the general subsidence of prices in Occidental money. Evidences are accumulating that sensitiveness is replacing inertia in tone-giving quarters."

These suggestions are so Delphic that they ought to captivate the half-baked intellect of the silver fanatic of the Southwest. It must be acknowledged at the same time that Mr. Horton's article contains sufficient truth, when strained of its obscurities, to be worth the attention of thinkers. The purport of his sketch of the later phases of the silver controversy is that Europe has been from the very outset watching the chance to unload her own surplus silver upon the United States; that each country has dodged and evaded the opportunities offered them to "rehabilitate silver," waiting for an opening to get rid of their own stocks by dumping them on some other country, but especially upon the rich greenhorn on this side of the water. Seven years of this waiting game have gone by, and nothing has happened except that the United States have loaded themselves up with silver, but have not relieved Europe of any part of her burden. The situation at the beginning of the present year was growing uncomfortable. Germany and France were ready to do something. This is what Mr. Horton means when he says that "sensitiveness was replacing inertia in tone-giving quarters." Simultaneous movements were observed in the German Reichstag and in the French Chamber looking to a new Monetary Conference. They came to nothing. But what, Mr. Horton asks, would have happened if Congress had passed the Senate Finance Committee's bill last February, which called for such a conference, with the significant proviso attached that our coinage would cease on a day certain if an international agreement were not reached? Would not Germany and France have met us rather more than half way? It is Mr. Horton's opinion that they would have done so. Mr. Horton gives an explanation of the failure of the bi-metallic motion in the Reichstag which we have not seen elsewhere. He says that it was caused by the Clerical party, under the lead of Windthorst, who refused to commit himself for or against bi-metallism, but insisted that it was a Government question, and accordingly that it was the duty of Prince Bismarck to take the initiative by introducing and supporting a measure to that end. In other words, Herr Windthorst and his followers would not help Bismarck to shirk his reponsibility, and therefore voted down the motion *pro forma*.

How much effect Mr. Horton's essay may have upon the silver men it is impossible to say. It will have none upon that wing of the party that has silver to sell. The Hills and the Joneses are as insensible to argument as the two jurymen who had a share of the pork for the stealing of which they were empannelled. Mr. Horton and Mr. Walker are as obnoxious to them as the veriest "gold bug" in the country. What they want is a steady market for silver, and every man, be he bi-metallist or mono-metallist, who favors cessation of the Government purchases of silver, either permanent or temporary, is counted an enemy. Mr. Horton, by the way, throws out a bait to them in the form of a suggestion that a cessation of coinage does not necessarily mean a cessation of purchases. But they will not bite. They know that purchase without coinage would not continue long. The wild-eyed statesmen of the Southwest who have no silver to sell would part company with them if they should consent to that compromise. Indeed, there seems to be little hope for a compromise of any kind, unless Senator Allison's suggestion is heeded that there be a temporary stoppage pending international negotiations, the coinage to be resumed thereafter without further legislation. The only hopeful sign aside from this is the threat indulged by some of the extreme fanatics that they will resort to filibustering, if necessary, to defeat anti-silver legislation. Filibustering is only resorted to when a party is in the minority, and it may be assumed that when the silver men take such steps to defeat legislation their Waterloo is not far distant.

The strength of the prohibition movement in Georgia is still a mystery to most Northern people, but the explanation, according to the Savannah *News*, is very simple. The chief reason is a purely economic one. White employers have found that the unrestrained sale of liquors demoralizes their black laborers, and they have

thus been driven by necessity to favor prohibition. So long as there is free whiskey there is a low dramshop at every crossroads and at the corner of every plantation, where the negroes not only spend their wages, but trade off stolen cotton, the laborers being thus ruined, while the employers are robbed of a large percentage of the products of their plantations. It is the same way on the turpentine farms, in the lumber districts, and in the cities. In short, the whites have found that while the best interests of the State demand the improvement of the negroes, very little can be done for them as long as there is free whiskey, and so they support prohibition. Self-interest is thus the strongest temperance agency at work in the South.

The lively bidding for negro votes by the rival white parties in the recent contest over prohibition in Atlanta, Ga., is only one of a number of signs that the color line in politics is vanishing throughout the South. For instance, at a celebration of their victory by the Democrats of Louisa County, Va., a few days ago, the negroes who had worked with the whites during the contest were assigned prominent places, and the leader of these blacks was presented with a gold-headed cane. The Richmond *Whig*, the expiring Mahone organ, bears witness that this is no exceptional case, but that the Democrats are always ready to liberally reward colored voters who support them. So, too, in Delaware, the Wilmington *News*, the leading Republican paper, testifies that "there are a great many colored men in Delaware who vote the Democratic ticket" habitually. In the face of such evidence from Republican sources, the bloody-shirt orators will hardly have the impudence any longer to regard every man with a black skin as a political slave, and to consider the census figures of adult male negroes in any Southern State as the number of Republican votes which will be polled if there is a fair election.

A Nashville newspaper the other day published a statement which illustrates how the race problem at the South is working out its own solution. The Grand Jury empanelled at the recent term of the Criminal Court included one negro, and after their work was completed, the white members of the body concluded to "make a public expression of their appreciation and admiration of the course pursued by this colored gentleman during the session." They accordingly asked a publication of the fact that this was the first instance in which most of them had ever been associated with a negro in a responsible position, and that the relation was thus inevitably strained, but that his firmness, justice, and conscientiousness "eradicated every prejudice," while, to cap the climax, "his demeanor in every social aspect was everything that the most exacting Southern gentleman could require."

New Hampshire finds every month fresh evidence of the misfortune brought upon the State by the passage of the "Valued Policy" Law last summer. The manufacturers were naturally first heard from, and one after another soon announced that he should abandon the State because he found it impossible to secure new insurance as his old policies ran out. Now it is discovered that another great industry of New Hampshire, the "summer boarder" business, is threatened with ruin from the same cause. There are in the State, of hotels only opened for the summer traffic, no less than 142 which have accommodations for over 50 people apiece, while a number of them are large enough to house hundreds of people at once. They are costly structures, with expensive furnishings, and are always considered very risky property; the insurance on one of these great hotels being usually distributed among a large number of companies. Since the new law went into effect, and the foreign companies withdrew from the State, not a company in New Hampshire will take a dollar on such property. Their policies are running out daily, and everybody who has capital invested in them is anxious to get it out, while an effectual quietus has been put upon all new enterprises, like the projected $65,000 extension of the Glen House and the erection of other hotels. In short, the whole industry is utterly demoralized, and the prospect for next summer at all the resorts is most discouraging. It is a curious illustration of the wide ramifications of modern business relations.

It is encouraging to find such evidence as the *Christian Union* of last week affords, that one religious paper of wide circulation and large influence is able to discuss the Sunday question with candor and intelligence. The *Christian Union's* article is suggested by the agitation in this city for the opening of the two great museums, and it dismisses with proper contempt, as beside the question, the suggestion that the movement is instigated by an infidel society. It points out, also, that the issue is not to be settled by a reference to the Bible, and packs a great deal of truth in small space when it says: "The Fourth Commandment is a commandment to rest; and, with the possible exception of a somewhat enigmatical passage in Isaiah, there is nothing whatever in the Scripture to forbid the community the enjoyment of books and art, and whatever may be necessary to make that enjoyment possible and profitable on the appointed rest-day." Laying extraneous considerations aside, the *Christian Union* says that the simple question to be determined is whether the Sunday opening of libraries and museums will conduce to human welfare, and especially to moral culture and elevation, and declares that it is inclined to answer this question in the affirmative, for this reason:

> "In our great cities there is an immense multitude who have no real homes. They include, not merely the workingmen who live in tenement houses, but also clerks, working-girls, bookkeepers, and a great host of men of moderate means who live in boarding-houses, many of whom have but a single bedroom, which they never occupy except during the hours of sleep. What can a Christian community do for this great class, itself the product of modern civilization, better than provide a kind of communistic substitute for home in a room or rooms furnished with pictures and with books, warmed and lighted, and made comfortable staying-places?"

The "intensity," as the *Sun* says, of the partisanship in the British elections, is something very remarkable, considering that there are no offices and no money to be had by being intense. An Old-Fashioned Democrat, among us, always asks the candidate beforehand what he will give him to be "intense," and if he discovers that he cannot have what he wants, he becomes glacial in his coldness. Look, on the other hand, at Cullan's supporters in Dundalk. He is a poor drunken creature, who has nothing to bestow on any one, and seeks reelection simply as a "vindication"—that is, to prove that he never was drunk in the House of Commons. Yet see how "intense" his supporters are. They bludgeon his opponents, interrupt their speakers, and tear down their platforms, and all for nothing. Similar scenes have happened in England and Wales. Now, suppose these men were all expecting post-offices, and custom-house inspectorships, and weigherships, and consulates, how their intensity would put our gelatinous, clammy Democratic spoilsmen to the blush! These men glow with fires of which our old office-begging blatherskites, with their "deals," and "dickers," and "slates," and "scoops," and "boodles," and "rakes," and "pulls," know nothing.

The most important result of the British elections, indeed, one may say the only one, as has been long foreseen, is the triumph of Parnell in securing the return of eighty-four or eighty-five of his own followers, and pricking what may be called the Ulster bubble. It has long been a theory of anti-Irish politicians in England that Ulster was a region entirely occupied by a sturdy Protestant yeomanry, firmly attached to the British Crown, and utterly hostile to the designs and ideas of the people of the South and West. This hallucination went so far a year ago that the appearance of Land League orators and candidates in Ulster was treated as an "invasion" of the province, and held by many people to justify riotous demonstrations against them. This view was taken with much indignation by our old friend the *Tribune's* Tory Squire, who swore, on his breeches and boots, that, gad sir, it was more than a fellow could stand. It now appears that in Ulster Parnell has polled 42,368 votes against 94,362 Loyalists, or, in other words, very nearly one-half as many. In the rest of the island he has 179,243 votes against 29,739. In other words, he has two-thirds nearly of the voting population on his side, and he has shown that he can make a considerable impression on many of the English constituencies. In the present condition of English parties he can impose terms on either of them. There is not in the present embittered state of feeling between them the smallest likelihood of a coalition that could resist him. The latest news indicates that he is not unlikely to make overtures to the Radicals, with whom he can probably come to terms, and who with him will be able to reduce both the Tories and the Whigs to nothingness. In short, he is on the very verge of real greatness. He is likely now to be called on for a display in the field of construction of the great power he has shown in the field of organization. Should he successfully meet the test, he will have a very high place in history.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 2, to TUESDAY, December 8, 1885, inclusive.]

DOMESTIC.

AT a Republican Senatorial caucus in Washington on Friday the nomination of President pro tempore of the Senate was unanimously tendered to John A. Logan, but he declined it, and the caucus thereupon adjourned. The refusal of Logan was not a surprise to his friends. He stated to them privately at the outset that he did not wish the office, that it was not adapted to his tastes, and that he preferred his position in committees and on the floor. Logan, like many ambitious men, has often regarded the Vice-Presidency as the limbo from which a politician may never hope to reach the Presidency. There is a strong sentiment among Congressmen of both parties for the early passage of the Hoar Presidential Succession Bill, which puts the members of the Cabinet in the line of succession.

At a caucus on Saturday the Republican Senators nominated Mr. Sherman, of Ohio, for President pro tempore. There was no opposition, Senator Edmunds having declined to run. It was determined that the bills relating to the Presidential election and also to the Presidential succession, which had passed the Senate during the last Congress, should be introduced as soon as practicable and, after a proper reference and consideration, should be promptly passed. The Democratic Senators gave the complimentary nomination to Mr. Harris, of Tennessee.

The first session of the Forty-ninth Congress was opened in Washington at noon on Monday. Mr. Sherman was elected President pro tempore of the Senate, and Mr. Carlisle Speaker of the House. After some routine business, both houses adjourned out of respect to the memory of Vice-President Hendricks.

President Cleveland's first annual message is a very long document. It was read before both houses of Congress on Tuesday, and is summarized in our editorial columns.

The annual report of the Secretary of the Treasury embraces fifty-eight pages of printed matter, and is accompanied by a special report of fifty-six pages on the collection of customs duties. The ordinary revenues of the Government for the fiscal year 1885 were $323,690,706, and the ordinary expenditures (including sinking fund, $45,604,035) were $305,830,970, leaving a surplus of $17,859,735. The estimated revenues of the year 1886 are $315,000,000, and the estimated expenditures, including sinking fund, $290,750,000. For the year 1887, however, the Secretary estimates that there will be a deficit of $24,589,552, the revenue remaining at $315,000,000 and the expenditures reaching $339,589,552. Of this estimated increase of $49,000,000 in expenditures, $19,000,000 is for pensions, $15,000,000 for the navy, and $4,000,000 for fortifications. The interest-bearing debt has been reduced during the fiscal year $10,369,750, and now stands at $1,260,778,162, including the Pacific Railroad bonds ($64,623,512). The balance in the Treasury of assets over liabilities has been increased $58,053,702 since March 1, 1885, of which $36,000,000 is silver coin, $16,000,000 gold coin, and $9,000,000 legal-tender notes.

On the subject of reform in taxation Secretary Manning says: "Besides the reforms which are desirable for the effective administration of any system of taxation levied through imported merchandise, and are indispensable for the administration of customs laws which, like our own, are a chaos rather than a system, I venture to hope that in due season it will be the pleasure of Congress to consider some other reforms, upon which, as is requisite, all parties may agree and that are of a different scope. Like our currency laws, our tariff laws are a legacy of war. If exigencies excuse their origin, their defects are unnecessary after twenty years of peace. They have been retained without sifting and discrimination, although enacted without legislative debate, criticism, or examination."

The annual report of Mr. C. N. Jordan, Treasurer of the United States, shows that the net revenue of the Government during the last fiscal year was $323,690,706, or $24,829,163 less than the preceding year, while the expenditure was $260,226,935, or $16,100,690 greater than in the preceding year. During the same period there has been an increase of $33,463,633 in the gold assets, of $22,095,016 in the silver assets, $6,776,423 in the legal-tender assets, $171,284 in national-bank notes, and $1,147,107 in national-bank deposits.

Secretary Lamar's report is long and elaborate. He goes over the question of cattle leases in the Indian Territory, and says: "I now have the satisfaction to state that the reservation is entirely free from cattle men and their herds." To advance the interests of the Indians, the Secretary recommends that a part of every reservation be divided into separate tracts of suitable size for farms, to be allotted to each individual as his sole and separate estate. Provision should be made against the power (until after a time limited) of selling or mortgaging the same, or even leasing it to any but Indians living within the same reservation. Provision should be made that the Indian accepting a patent for his land shall not thereby forfeit any of his rights as a member of his tribe, nor the protection and benefit which the laws of the United States extend to the Indians generally.

General Atkins, Commissioner of Indian Affairs, in his annual report recommends the following plan for civilizing the red man: "It should be industriously and gravely impressed upon them that they must abandon their tribal relations and take lands in severalty, as the corner-stone of their complete success in agriculture, which means self-support, personal independence, and material thrift. The Government should, however, in order to protect them, retain the right to their lands in trust for twenty-five years or longer, but issue trust patents at once to such Indians as have taken individual holdings. When the Indians have taken their lands in severalty in sufficient quantities (and the number of acres in each holding may and and should vary in different localities according to fertility, productiveness, climatic, and other advantages), then, having due regard to the immediate and early future needs of the Indians, the remaining lands of their reservations should be purchased by the Government and opened to homstead entry at 50 or 75 cents per acre. The money paid by the Government for their lands should be held in trust in 5 per cent. bonds, to be invested as Congress may provide, for the education, civilization, and material development and advancement of the red race, reserving for each tribe its own money. If this policy were adopted systematically by the Government, it would be strange if in five years from its inauguration and establishment there should be an Indian of any tribe in the whole country who would refuse to accept so favorable and advantageous a measure."

The first annual report of the Secretary of the Navy differs essentially from those of his recent predecessors in the fact that much space is devoted to an argument urging the necessity of the reorganization of the Navy Department upon a basis of business principles. Fully one-third of the long report is given up to this subject. Secretary Whitney says: "My brief experience in this Department has satisfied me that, whatever changes in its organization may be desired, it is of first necessity to separate, as much as practicable, the work of direction and deliberation from the details of execution; in other words, that there should be in the construction of a navy, as in every other kind of business, a proper distribution of labor."

From the report of the Secretary of War appears that the total expenditures of the War Department for the fiscal year were $45,850,999 54, including river and harbor improvements. For the fiscal year ending June 30, 1886, the appropriations are $31,762,413 40, the large reductions being due to the fact that there was no appropriation for rivers and harbors. The Secretary has reduced the estimates for the fiscal year ending June 30, 1887, from $81,782,324 97 to $48,204,183 48. The army consists of 2,154 officers and 24,705 men. The condition of affairs at the Military Academy is highly satisfactory. The militia should be armed in uniformity with the regular army. The Secretary recommends the appointment of a Judge-Advocate-General, or legislation to meet the present difficulty, the office being practically vacant.

Major-General Schofield, commanding the Division of the Missouri, in his annual report, says: "I beg leave to submit that, in a country of 50,000,000 of people, 50,000 men would be a small army to be maintained with sole reference to possible foreign wars. But when the country has constant daily use for nine-tenths of that force to protect its people and their property against destruction by savage tribes in their midst, it is extremely unwise to limit the army to its present strength. As well might the great cities of the country limit their police force to one-half that which experience has shown to be necessary for daily service, with no reserve for great emergencies."

The President has appointed Mr. A. A. Wilson to be Marshal of the District of Columbia, in place of Colonel Clayton McMichael, resigned. Mr. Wilson is a prominent Democrat, President of the Columbia Club, a director in railway, insurance, and other business corporations, and possessed of a fortune of about $200,000. He is spoken of by old residents as a thoroughly reputable man. The President specifically announces, in making the appointment, that Mr. Wilson will not be called upon to perform any social duties at the White House.

The President on Thursday appointed John A. Sullivan to be Collector of Internal Revenue for the Second District of New York. Mr. Sullivan is a well-known business man of New York city, and has been a prominent member of the Produce Exchange for many years.

The President on Thursday afternoon suspended Judge E. J. Dawn, of the District of Alaska, and appointed Lafayette Dawson, of Missouri, in his place. It is asserted that it was Dawn's appointment in June last which led to the writing of a letter to the President by one of the men who had endorsed him, in which he was declared to be wholly unfit for the place. The letter and the President's reply, published on August 5, were widely quoted.

James W. Porch, of Missouri, has been appointed United States Consul-General to Mexico.

The public debt was increased during November $4,887,198 47.

There is a movement of United States troops in the West toward Salt Lake City. It is believed that Mormon outbreaks are feared.

Chiricahua Indians are fighting among themselves in Arizona, and have massacred a number of white people.

The Virginia Democratic legislative caucus on Monday night nominated John W. Daniel, of Lynchburg, for United States Senator to succeed Mahone. Daniel received 65 votes and John S. Barbour 31.

There is a steadily increasing demand for pig metal and ore in Pittsburgh, and prices have substantially advanced.

The New York Central and Hudson River and West Shore injunction matter has been settled in New York. The legal proceedings were withdrawn from the court at Syracuse on Saturday. The absorption of the West Shore by the Central has been completed.

In Attorney-General O'Brien's opinion in the matter of the application for an injunction to restrain preparation for laying horse-car tracks on the Fifth Avenue, New York, it is held that the Act of 1885 is constitutional, and prohibits the Fifth Avenue, or any other railroad company, from constructing a railroad on that avenue.

General Alexander Shaler of this city, President of the Board of Health, was indicted on the charge of bribe-taking by the Grand Jury on Friday. This is the charge alluded to in last week's Summary.

It has been decided to send several of the children who were bitten by a mad dog in Newark, N. J., to Paris, to be treated by M. Pasteur. Communication has been had with the distinguished Frenchman by cable, and he has asked that the children be forwarded to him at once if there is any danger to be apprehended in their case.

The will of Mr. Hendricks leaves all his property to his wife.

William H. Vanderbilt died suddenly on Tuesday at 2:20 P. M., in his house in Fifth Avenue. He was talking in his library with Robert Garrett, President of the Baltimore and Ohio, when stricken with apoplexy, and fell at Mr. Garrett's feet, where he expired instantly. William H. Vanderbilt was the eldest son of Commodore Vanderbilt, and was born on May 8, 1821. His father had a poor opinion of his capabilities, and gave him no financial start in his early life. He worked hard as a bank clerk, and afterward as a farmer on Staten Island. His skill in managing his farm finally attracted his father's attention, and the latter gave him $6,000 with which to pay off a mortgage. His first experience as a railway manager was as receiver of the Staten Island Railway. In 1864 the Commodore associated his son with him in the management of the Harlem Road, and from that time on began to repose confidence in him. On the Commodore's death in 1877, William H. succeeded to the bulk of the estate, and has ever since been the controlling power of the great New York Central system, every year adding to his wealth and increasing his power as a railway manager. The details of his well-known schemes cannot be summarized here. He died worth about $200,000,000. It is believed that about $50,000,000 will be divided among his heirs, and the bulk of his estate will be managed by trustees; Cornelius Vanderbilt and Chauncey M. Depew being two of them. Mr. Vanderbilt left a widow and eight children, four of them sons.

FOREIGN.

The tide in the British Parliamentary elections began to turn on Wednesday, and the Liberals were jubilant. By 6 P. M. on that day the Tory net gain had been reduced to 38 seats. The Liberals had gained 12 seats on the elections of the previous day.

In Louth on Wednesday Mr. Philip Callan, who was repudiated by Mr. Parnell and ran as an Independent Nationalist against Colonel Nolan, Mr. Parnell's nominee, was defeated by over 1,000 majority—a greater victory than was expected by the Nationalists, as Mr. Callan is very popular in the district. Mr. Callan announces that he will petition the House of Commons against the seating of Colonel Nolan.

The total Parnellite vote cast in Ireland is 221,881, and the Loyalist vote, including Tories and Liberals, is 121,101. The vote in Ulster was: Parnellites, 42,638; Loyalists 94,362. Outside of Ulster the vote was: Parnellites, 179,243; Loyalists, 26,739. The London *Standard* on Monday morning, in an article evidently inspired, insisted that Lord Salisbury should not resign, and said that his failure to secure a majority did not prove that a mandate should be given to any other coherent body of statesmen. The *Standard* depends upon the Whigs to support Lord Salisbury.

Mr. Gladstone wrote a letter on Saturday in which he said: "I am certain that the Tories will be much weaker than the Liberals in the next, as in the past, Parliament. It will be impossible for the Tories to conduct the Government on their own strength, or to hold a position of dignity and independence. The Liberal party will outnumber the Tories and Parnellites combined, and will be the only party independent of unworthy motives to court the Parnellites for support."

Mr. Chamberlain, the Radical leader, in a speech at Leicester on Thursday, said the defeats of the Liberals in the boroughs were due to five Ps—Priests, Publicans, Parsons, Parnellites, and Protectionists. He thought that such a combination was unlikely to recur. Mr. Parnell boasted that he had throttled the Liberal party. He would probably regret the boast. If it were true, then he had throttled the only great machinery that existed for securing justice to Ireland.

It has become generally known in London that the Tories furnished £340 to two prominent members of the Social-Democratic Federation, avowed revolutionary Socialists, to induce them to contest two seats. Thus they split the Liberal vote.

Up to 3 o'clock on Tuesday afternoon there had been elected 324 Liberals, 245 Conservatives, and 75 Nationalists, giving the Liberals a clear majority of 4. Twenty-six seats are yet to be filled. Rumors were current that Lord Salisbury had resigned, but they were not confirmed.

Cardinals Manning and Howard have written to the Pope in favor of canonizing Joan of Arc.

The Carolines proctocol consists of six articles. The first article recognizes Spain's claim. The second fixes the limits of the Pelew and Caroline Islands. The third lays down the same rules regarding liberty of trade as are contained in the Sooloo treaty. The fourth grants Germany coaling and naval stations. The fifth allows Germany to establish farming colonies. The sixth provides that the treaty must be ratified within eight days.

The Queen Regent of Spain on Thursday for the first time presided over the council of the Cabinet. She expressed the desire that her reign should be marked by the extension of amnesty to all press offenders and others who are now undergoing sentences of exile and suffering on account of political crimes. Her wishes will be carried out by a proclamation.

Castelar, the Spanish Republican, admits that he is not in accord with Zorrilla, and is opposed to a revolution.

A conference of Carlists is being held in Venice.

Premier Sagasta, of Spain, has visited General Lopez Dominguez and arranged for concerted action, the latter promising to sustain the Cabinet in developing a liberal policy.

The Bulgarians on Wednesday refused the proposals of the Servians to withdraw the armies to their respective territory and to prolong the armistice to February 1. Russia and Germany urged upon Turkey immediate interference in Rumelian affairs. On Wednesday afternoon it was reported that Turkish troops had crossed into Rumelian territory, but this was not confirmed.

Turkish delegates arrived in Philoppopolis, Rumelia, on Thursday. A meeting of citizens was held, and the Bishop urged them to repudiate the proposal to restore the *status quo ante*. The Russian agent was present, and said the delegates had preceded a European commission, and that the Sultan's special commissioner was coming to reorganize the organic statutes. He warned his hearers that if the commissioner was not received, Turkish troops would enter the country, and that Russia would refuse assistance to the Rumelians. The meeting, however, declined to accept the commission, or to treat on the matter of restoring the *status quo ante*. The Russian agent then withdrew from the meeting. The meeting afterward sent to the various foreign consuls a copy of a resolution which in substance was as follows: That the Turkish delegates be requested to postpone the object of their mission and depart for their homes; that the citizens of Philippopolis only acknowledge Sofia, the capital of Bulgaria, as the seat of Government; that the army of Eastern Rumelia and the educated classes being absent at the seat of war, the citizens are unable to treat on a subject so important to the province, and, having sent 60,000 men to the war, they cannot listen to a proposal for the restoration of the *status quo ante*.

An order was issued on Thursday by the Servian Government appointing Colonel Horvatovitch Commander-in-Chief of the Servian armies. In official circles it was thought that the resumption of hostilities was certain, owing to Prince Alexander's refusal of the terms proposed by Servia. The London *Telegraph's* correspondent at St. Petersburg on Friday said it was stated in court circles that two or three army corps were concentrating in the south of Russia, and that their eventual goal was Bulgaria. Austria is preparing 50,000 men. The Powers have appointed the consuls at Philippopolis to form a commission of inquiry. England is likely to hold aloof. There is also a report that the Powers may hold a conference at Berlin to delimit the Servian-Bulgarian frontier.

The terms of peace offered by Bulgaria were rejected by Servia on Saturday. It was reported that fighting was renewed on Monday. It was reported from Vienna on Monday that the Austrian Minister to Servia had started for Nissa, bearing an urgent warning to the Servian Government that a resumption of hostilities with Bulgaria would bring dangers which even Austria's good will could not prevent. Prince Alexander had been notified that Austria would intervene if Nissa were captured by the Bulgarians.

Prince Alexander has formally rejected Servia's peace proposals, and reiterates his own demands. The Porte threatens to intervene.

The French Chamber of Deputies on Monday, by a vote of 338 to 174, decided to consider the proposed increase of the duties on cereals and cattle.

The present French Government will not abandon Tonquin.

The order of expulsion of the German-Americans on the Island of Foehr has again been suspended, Mr. Pendleton, the United States Minister, having intervened in the matter.

Italy has annexed Massowah with the approval of Lord Salisbury. Five British battalions have been ordered to proceed to Egypt.

The first anti-slavery meeting ever held in Morocco assembled at Tangier on Monday.

Finedah, the Burmese Minister who is responsible for Theebaw's cruelties and intrigues against England, was arrested while trying to escape.

A serious revolution has broken out in the Mexican State of Nuevo Leon. A skirmish has taken place with the rebels. The revolution is in the interest of Romero Robio, Secretary of State and father-in-law of President Diaz. Robio aspires to succeed Diaz in the Presidency of Mexico, and is laying the foundation for his election by elevating such persons to high offices in the different Mexican States as will use their influence for him in the election, which takes place in about a year.

It is generally conceded now that the State of Nuevo Leon, Mexico, will be declared under martial law, and that a military Governor will be appointed.

General Caceres has captured Lima, Peru. General Iglesias, the President, surrendered on Wednesday afternoon, and Señor Eusebio was made provisional President. A commission has been named to take command of the Government, and to issue orders for holding elections. Amnesty for all has been declared.

THE PRESIDENT'S MESSAGE.

We are sorry that President Cleveland has departed in his first message from his practice of making his state papers short, because in documents of this sort what is gained in extension is lost in intension, as the logicians say. We can do little more this week than make a brief summary of the message, though it is full of points which invite comment.

The President begins by announcing friendly relations with all foreign governments; mentions the refusal of satisfaction to the Argentine Government for an old dispute of 1831; declares that the reasons given for the refusal of the Austrian Government to receive Mr. Keiley were such as could not be acquiesced in, intimating that one of them was Mrs. Keiley's being a Jewess, and states that his place has not been filled; describes the revolutionary outbreak at Panama last spring; announces that the claim of the Colombian Government to close ports held by the insurgents, and to declare insurgent vessels pirates, was not recognized, but that this did not involve the concession of belligerent rights to the rebels; repudiates the Arthur-Frelinghuysen plan for the canalization of the Isthmus, on the general ground that paramount privileges of ownership, with corresponding obligations outside our own territory, are objectionable; commends the Tehuantepec route for a ship railway, and the neutralization of any line of communication to be hereafter made across the Isthmus; condemns the outrages on Chinamen in Wyoming and elsewhere, and declares that all the power of the Government will be employed for their protection—intimating, however, that it may be well, in view of the strong race prejudice against the Chinese, to imitate the Dominion of Canada, and make their exclusion more stringent; condemns the conduct of Messrs. Sandford and Kasson in signing the Congo convention without reserve or qualification, and, therefore, does not ask the sanction of the Senate for the act; announces payment of French claims on account of the war of the rebellion, and a report on the American claims against France for spoliations prior to 1801; denounces French restrictions on our pork, and still more strongly Austrian and German prohibition of the same commodity; mentions continued controversy with Germany touching rights of German-American citizens resident in that country; proposes the appointment of a commission to consider the whole question of the British-American fishery question; announces negotiations with Great Britain for extending the scope of the extradition treaty; recommends more accurate tracing of the boundaries of Alaska; asks for legislation to put in force the commercial treaty with Mexico; commends to the attention of Congress the conclusions of the Berne Congress on the international copyright question; recommends a revision of the naturalization laws; condemns the Arthur-Frelinghuysen proposed commercial treaties with Spain and San Domingo, as surrendering large revenues for inadequate consideration, and giving up indispensable control over our own tariff; urges the payment of consuls wholly by adequate salaries, and the abolition of the duty on foreign works of art, on the grounds with which we are all familiar.

The message, summarizing the report of the Secretary of the Treasury, recommends a reduction of the tariff, through a lowering of duties on "the imported necessaries of life," on the simple ground that our revenue is unnecessarily large; dwells on the importance of the silver question; shows that only $50,000,000 of the $215,759,431 already coined have got into circulation; declares that the desire to utilize the silver product of the country should not lead to a perversion of the coinage powers of the Government, and that a continuance of the silver coinage at the present rate will before long lead to the substitution of silver for all the gold the Government owns. It points out that already at some periods 58 per cent. of the customs duties have been paid in silver, while the average is 20 per cent.; that in view of all this the hoarding of gold has already begun, and that its total disappearance will let the country down once more on a depreciated currency, fluctuating in value; that none will suffer from this state of things so much as the poor; that history shows that all attempts to make coins of unequal value circulate side by side must prove futile; that all efforts to get foreign nations to adopt with us a common ratio between gold and silver have been unsuccessful; that the Latin Union has just entered into an agreement to stop coining silver, and to redeem in gold what has been already coined; that "the debtor class" is not dishonest, and that, anyhow, it is not the rich creditors only who will suffer from the depreciation of our currency, but the widow, the orphan, and the depositors in savings banks; and that prosperity hesitates and capital shrinks because of the uncertainty on this question. The message recommends, therefore, the suspension of the silver coinage now carried on under the Act of 1878.

After summarizing the operations of various Treasury bureaus, and the reports of the Navy and Interior Departments, and generally concurring in their recommendations, the message comes to the Mormon question; reports the successful execution of the Edmunds Law; denounces polygamy, and passes a glowing eulogium on monogamous homes; recommends legislation to prohibit the importation of Mormon converts into this country. It commends the civil-service rules, and hopes

> "that we shall never again be remitted to the system which distributes public positions purely as rewards for partisan service. Doubts may be well entertained whether our Government could survive the strain of a continuance of this system, which, upon every change of an administration, inspires an immense army of claimants for office to lay siege to the patronage of Government, engrossing the time of public officers with their importunities, spreading abroad the contagion of their disappointment, and filling the air with the tumult of their discontent";

recommends an increase in the salaries of the Civil-Service Commissioners; calls for an enlargement of the accommodation for the Congressional Library; and, after a brief mention of the affairs of the District, and of the need of legislation touching the Presidential succession, closes with a protest against subordinating the needs, the welfare, and the aspirations of an intelligent and generous nation to the narrow advantages of partisanship or the accomplishment of selfish aims.

COST OF OUR POLITICAL NAVY.

Secretary Whitney's annual report is a great novelty in Navy Department literature. We doubt if a more thoroughly readable document has been issued from any department of the Government for many years. With malice toward none and with abundant charity for all, Mr. Whitney states in a straightforward, business-like manner the extraordinary condition of affairs which he finds in his department, putting the blame for all the defects upon the system and none of it upon the officials who are serving under its rules. His view of the system, as it has been built up during the past twenty years, seems to be that wise and economical administration under it is an impossibility; that with the best of men in the positions of responsibility, all actuated by the best intentions, the machinery of the Department would still go on grinding out extravagant expenditures, political jobbery, and consequent general loss with almost no profit whatever to the Government. In other words, the machinery of the Department has been so completely organized in the interest of "politics" that it will turn out nothing else but "politics," with all that the term implies, no matter what kind of an engineer is in charge of it. The only remedy is to reorganize the Department on a new basis of simple business principles.

That the Secretary does not overstate the evils of the present system is made plain by him in the general results which he cites as the fruit of the past twenty years of Navy Department management. One fact alone is enough to confirm the truth of his most sweeping statements. He says:

> "The country has expended since July 1, 1868—more than three years subsequent to the close of the late civil war—over $75,000,000 of money on the construction, repair, equipment, and ordnance of vessels, which sum, with a very slight exception, has been substantially thrown away; the exception being a few ships now in process of construction. I do not overlook the sloops constructed in 1874, and costing $3,000,000 or $4,000,000, and to avoid discussion they may be excepted also. The fact still remains that for about seventy of the seventy-five millions of dollars which have been expended by the Department for the creation of a navy we have practically nothing to show. It is questionable whether we have a single naval vessel finished and afloat at the present time that could be trusted to encounter the ships of any important Power—a single vessel that has either the necessary armor for protection, speed for escape, or weapons for defence."

That is, as the Secretary adds, no secret. Everybody knows that we have no navy that could keep afloat for half an hour in the face of attack from the war vessels of any respectable naval Power in the world. His analysis of the system in use in the Department shows with admirable clearness how this disgraceful condition of affairs has been brought about. In the first place, the responsibility for expenditures is so divided up among "bureaus" that there is no possibility of placing it anywhere. No one bureau knows what the other is doing; each one audits its own accounts, and there is no central and final financial authority which has jurisdiction over them. The natural result is extravagance, open defiance of legal requirements concerning competitive bids on contracts, and political jobbery of all kinds. The man who has a "pull" on a bureau gets all the contracts. The Secretary says that his examination of the

list of men from whom supplies are purchased revealed an "astonishing repetition of the names of naval contract brokers, not engaged in a regular business, and whose dealings with the Department caused grave scandal years ago." The legal requirement for open competitive bids is almost uniformly got around by the plea of "necessity for immediate purchase" which the head of a bureau is authorized to give, such authority having been decreed him to provide for special emergencies in time of war. An order of Secretary Thompson's in 1877, that the limit of any single purchase under a "certificate of necessity" should be $500, is frequently circumvented by the contractors putting in a series of bills each for an amount under $500. The Secretary cites one contract for $61,000 worth of canvas which was paid in this way.

This extravagance and general irresponsibility of expenditures has been accompanied by a systematic disregard of all progress in invention as applied to naval construction. While every other country in the world, pretending to have a navy, has made extraordinary efforts to secure the benefits of all discoveries and inventions in construction and machinery, we have actually repelled such things. While other nations have been constantly increasing their resources in this way, multiplying and enlarging their educational advantages, offering high prizes for inventions and improvements, we have abolished the engineer class in our Naval Academy, so that we have no school of engineers whatever, and have refused even to accept the discoveries of American inventors. On this point the words of the Secretary are full of humiliation for every American:

"If the $75,000,000 spent since 1868 by our Government had been used to stimulate competition among our people in the production of modern ships of war, it is quite fair to assume that the activities and agencies at the disposal of the Government would have been by this time entirely adequate to its needs. It has been wasted by Government agencies upon worthless things. The invention of the country has been discouraged. The Hotchkiss gun, now commanding the widest attention, the manufacture of which is becoming an important industry in France, was the product of American invention, which, when ignored and rejected by Government agencies here, found elsewhere its field of development. Ericsson, whose name will always be one of the great ones of our time in history, works now, at the age of eighty-three, without encouragement or notice, at the great problems of naval warfare, and is receiving more attention and greater encouragement from other Governments than from our own. Examples might easily be multiplied. Suffice it to say our Government has placed itself in no relation to the inventive genius of the country, and is without the rich fruits which such a course would bring to it."

That is the fruit of protection to American industry as it has been brought forth by the Robesons and Chandlers and the corrupt ring of political adventurers who in these later years have come into control of the Republican party. It was a protection to public robbery, and was known to be so by the demagogues who were preaching it. The ships which they turned out were in all their parts and equipment a quarter of a century behind the times. The *Dolphin* was the last and best type of the series, and her merits are thus set forth by Mr. Whitney:

"The *Dolphin*, as she now is, should be regarded as a pleasure boat rather than a despatch boat. The absence of the most ordinary and approved devices for protection against hostile fire in her design take her out of the category of war vessels. The use, for instance, of vertical engines, exposing her machinery above the water line in a vessel without armor protection, is far from being good practice at this time. In fact, she does not bear favorable comparison with similar vessels built at about the same time by other countries. The *Surprise*, built by the English Government contemporaneously with the construction by us of the *Dolphin*, has horizontal engines placed below the water-line, with a horizontal steel protective deck and with coal protection in addition. She has forty watertight compartments as against the *Dolphin's* six. Her machinery weighed 10 per cent. less than the *Dolphin's* and produced 20 per cent. more power, and her speed is from two to three knots better than that of the *Dolphin*. The vital parts of the *Dolphin* are so exposed that under fire she would be quite useless; yet her design is chargeable to the Government. At the present time it is quite profitless to discuss her characteristics. She doubtless would not be thought worthy of duplication at the present time by any one."

Mr. Whitney closes his report with clear recommendations to Congress concerning the legislation which the Department needs before it can be put upon a basis which will make possible the complete elimination of the present evils in its system. He recommends the natural division of the functions of the Department into three branches: first, that having to do with the personnel and the fleet—this covers the enrolment, service, detail, uniform, organization, and discipline, etc., and is properly the military branch; second, that of material and construction; third, that of finance and accounts, covering all contracts and purchases. At the head of each branch should be one person who is solely responsible, and over all should be the Secretary as the final authority. That is a simple business system, similar in principle to that which every reputable private commercial or manufacturing house in the country uses, and without which it would not for a moment think of attempting to get along at all.

THE POPE AND THE STATE.

THE translation of the Pope's Encyclical, published in this country a week or two ago, was so bad that it was almost impossible to extract from it any clear idea of what his views on the relations of the Church to the world really were. Better renderings of it have since made it much clearer, although there is a certain amount of obscurity in all the Papal utterances, owing to the magniloquence and pomposity with which it seems to be what may be called ecclesiastical etiquette to clothe them. He reaffirms, as in duty bound, his predecessor's famous fulminations in the Syllabus against civil and religious liberty as it exists in modern society, but then goes on to define his own position. In the first place, he condemns absolutely the doctrine of popular sovereignty, with all its consequences, and more particularly the consequence or deduction that "everybody may judge for himself in religious questions, and may freely embrace any religion he pleases, or even repudiate all religions, if none of them happens to suit him"; also the consequence or deduction that "every one ought to have not only entire freedom of opinion touching his duties toward God, but complete liberty of thinking, or publishing what he thinks." The Catholic Church, he holds, ought not to be placed on a footing of equality with other religious sects. The State should not assume a position of neutrality toward the various religious denominations existing within its borders, for this is "Atheism." It is "absurd," he says, for any one who believes in God to pretend that several different ways of worshipping Him can all be equally good and agreeable to Him. To exclude the Catholic Church, then, from public life, and deny it all share in the Government and in the education of the young, is "a pernicious error."

All this is in the line of the Syllabus. Then come the qualifications and reservations. It does not follow from all this, he says, that certain forms of government, in so far as they contain no contradiction of Catholic doctrine, and are conducted with wisdom and justice, are to be proscribed, or that a limited participation of the people in the government "at certain periods, under the guarantee of certain laws, may not be both an advantage and a duty for the citizens." Moreover, although it is the duty of statesmen to allow only the "true religion" within the State, nevertheless, it is permissible for them, either with the view of securing a great good or avoiding a great evil, to tolerate the presence of others also. Finally, the Catholic Church is utterly opposed to compulsory conversion, believing with St. Augustine that "constraint can obtain everything of a man except faith."

The substance of all this is that the doctrines of the Catholic Church, as laid down by Pius IX., touching the constitution of modern society are in the nature of "counsels of perfection"—that is to say, they describe a state of things which the Church believes ought to exist, but which she does not expect to see, and has made arrangements to dispense with. The Encyclical is, in short, formal notice to the world that the Church can, in case of necessity, put up with lay government and religious equality, with scientific research, free thought, and free speech, much as she reprobates them.

The Pope concludes this part of his discourse with directions to the faithful in the matter of their conduct as citizens of irreligious countries. In private life, of course, Catholics ought to behave simply as good Christians. In political affairs they should have for their object, above all things, to induce the Government to provide that "the youth of the country should be educated in the knowledge of religion and in the practice of good works." It is "generally advisable," too, that they should take a full share in political affairs, but only generally, because in some countries—Italy, for instance, at this moment—it is not, for various grave reasons, advisable to enter on a political career or accept public office. Finally, he excepts the question of the form of government and the resulting political arrangements from the category of subjects on which it is not permissible to think and speak freely, and administers a rebuke, which is undoubtedly meant for the French Legitimists, to those who treat as criminal the holding of certain political opinions on the part of persons of undoubted religious orthodoxy.

The document is, on the whole, a very moderate one, and is a very skilful descent from the heights to which Pius IX. had carried the pretensions of the Church. Like most of the attempts, however, "to reconcile science and religion," it will do neither harm nor good. It relieves the Roman ecclesiastics and obedien

sons of the Church all over the world, who may happen, in these troublous times, to have to defend her against the charge of hostility to modern civilization, from the very embarrassing, not to say untenable, position in which the Syllabus placed them. In other words, it is an improved and convenient dialectical weapon, but this is all that can be said for it. As an offer of terms to the lay or scientific world, it is almost as chimerical as a proposal to surrender the Copernican for the Ptolemaic astronomy. For its essential assumption is that, some day and somehow, nations may again be got to discuss and decide, as they discussed and decided in the Middle Ages, which is the true religion, and that the Church has therefore only to wait in order to get her rights.

ENGLAND: ELECTION FORECASTS.

LONDON, November 21.

PARLIAMENT has just been dissolved, and the polling at the general election is close at hand. It will begin in the English boroughs on the 24th of November, and go on for nearly a fortnight, the boroughs coming first and the county divisions following. In each constituency the poll lasts for one day only, but the days fixed are, within certain statutory limits, left to the discretion of the returning officer. By the 2d of December the results will be so far known that the composition of the new Parliament will be pretty completely determined, and what happens on the three or four remaining days will not make a great difference. Before this letter can reach you, therefore, your readers will know what we are all here speculating on so eagerly. It seems rash, under such circumstances, for one writing in England to attempt to give any forecast of the result. Not to prophesy unless you know, is a specially sound maxim when those to whom you prophesy will know as soon as your prophecy reaches them. Still, such an attempt will serve to convey an impression of the data we now possess, of the hopes and fears that fill men's minds in these islands, even of the extent to which it is possible to form a tolerable prediction. And your readers will have the amusement, if the forecast I give turns out ludicrously wrong, of comparing it with the results telegraphed to them, and moralizing on the uncertainties of democratic politics. These uncertainties are greater at this election than at any we have had for fifty years, because not only have more than two millions of new voters been admitted to the franchise, but the voting districts are nearly all new, the old counties and boroughs having been cut up into divisions whose political proclivities have never been tested before.

There can be little doubt that if the election were being held on the old constituencies as they stood before the Franchise Act and Redistribution Act, the Liberal party would be beaten. It would, of course, have a large majority in Scotland and in Wales; but it would lose ground in England, and in Ireland it would receive a defeat far more than sufficient to counterbalance its Scotch majority. Speaking of Ireland, it must be remembered that for present purposes the Parnellite or Irish Nationalist party is reckoned as against the Liberals, and therefore practically along with the Conservatives. Irish voters in English boroughs are almost everywhere preparing to vote for the Conservative candidates; and though, of course, in the new Parliament the Nationalists will probably be equally opposed to both the English parties, they are in the first instance counted as enemies of the Liberal party, because it is now stronger than the Tory party, and more likely (as will presently be shown) to obtain a majority at the polls.

In proceeding to give you the best conjectures I have been able to procure regarding the results of the next three weeks' struggle, I will begin with England, and in England with London.

London has received an enormous increase of voting power by the recent act. She had only twenty-two members; she has now fifty-nine. Political life has hitherto been much slacker and duller in London than in the other great cities, so it is particularly difficult to guess which way the vote of the new London divisions will fall. Whichever party had produced the best candidates, the men of most forcible character and power of eloquent speech, would probably have gained a great advantage, for the masses of London are easily captivated by a potent and persuasive personality. However, both parties have been equally unable to produce a good assortment of candidates. There is, of course, a fair sprinkling of able men; but, take it all in all, London has not attracted strong men, and the average intellectual level of those who seek its suffrages is rather below than above that of the English boroughs generally. According to present appearances, the Liberals are sure of carrying one-half of the London seats, and may carry two-thirds. But for their internal dissensions, which have in several constituencies given the Tory candidate a chance of getting in because the Liberal vote will be divided between two Liberals, the Liberal party might count on fully two-thirds, *i. e.*, on forty members; and in spite of these dissensions they will have a majority in London as a whole.

In the other cities and towns of England the two parties seem nearly equally balanced. Most of the larger cities, such as Manchester, Birmingham, Leeds, and Wolverhampton, will give a majority to the Liberals. But Liverpool is chiefly Tory, and so are several of the other Lancashire boroughs, as well as many towns of the second and third class. There may be a decided Liberal victory, but if so, it will probably be by small majorities in most cases, and present appearances point rather to an indecisive result.

The English counties have been entirely transformed by the two reform acts. The new voters swamp the old ones, and the number of county members has been vastly increased. It is by these new voters that the issue between the two parties will be decided. Now the counties fall into two classes: those where the population is dense and chiefly occupied in manufacturing or mining pursuits, and those where it is more thin and composed of agricultural laborers.

The former class includes most part of Yorkshire, Lancashire, Durham, Southern Northumberland, Staffordshire, Cornwall, parts of Derbyshire, Cheshire, and Worcestershire. In these districts the workingmen will be supreme, and they are likely to vote Liberal, both because they expect more from that party, and because they hold themselves indebted to Mr. Gladstone for the gift of the suffrage. They demonstrated a year ago against the House of Lords with great vigor, and have not forgotten the action of the Conservative party there. A substantial majority against the present Ministry may therefore be expected from these parts of England, as well as from those county districts, such as some close to London, which are suburban in their character, occupied by workingmen who go in by railway to their work in the towns.

The latter class of county divisions comprises all the rest of England, and in particular the eastern counties from the Thames to the Humber, the midland counties (excepting parts of Stafford and Worcestershire), the southern and western counties. In these counties the voting power has hitherto lain with the tenant farmers, who have mostly followed the lead of their landlords. It has now been transferred to the laborers and the small tradesmen, shopkeepers, and mechanics, of the lesser country towns. But there was, of course, a possibility that these poorer people would fall in with the wishes of their more influential neighbors, that the laborers would vote with the farmer who employs them or the landlord who owns their cottage, that the small shopkeeper would seek to please his powerful customers. Such would certainly have been the case but for the introduction of the ballot, which enables every one to gratify his own feelings, and which has been long enough in use for the bulk of the people to begin to believe that it affords them an efficient protection. Influence, therefore, will count for comparatively little in this election: the humblest may vote as he likes. The tradesfolk of the small towns are very largely Dissenters, and Dissenters are usually Liberals: it is therefore probable that their vote will go heavily against Lord Salisbury. Dissent is less diffused among the rural laborers, except in one or two districts, such as Lincolnshire. But the silent aversion of the laborers to the farmers has long been deep and strong; and their tendency is to vote against whichever party the farmers favor. They are, moreover, pretty well aware that the Tory party was not, to say the least, very eager for their enfranchisement; and it is therefore likely that they will in general go with the Liberals. In some places, such as the East Anglian counties, this disposition is avowed: it has swelled to the dimensions of an open revolt, and the Tory party has almost lost hope of carrying these eastern seats. In the midland and western counties the attitude of the laborers is more guarded. They seem, by the indications which they give of their feelings at the meetings which go on every night over the country, to be on the Liberal side, but it may be doubted whether they will have zeal enough or courage enough to go in large numbers to the poll. If they do, Mr. Gladstone will have a large majority off the agricultural counties. If not, he will still have a majority, but a much smaller one.

I pass on to Wales. In the Parliament which has just expired all her thirteen members but one were Gladstonian. There is little prospect of any change; so this Celtic land will still count solid for the Liberals. Such uniformity of political complexion is due, it need scarcely be said, to the prevalence of nonconformity in the principality, and the desire to disestablish the Anglican Church.

Scotland has become a more important factor in our politics by having gained twelve additional seats. She now returns seventy-two members. It was at first hoped by the Liberals that nearly every one of these would be gained by them. But unexpected divisions have broken out between the "orthodox Liberals" and the extreme Radical section, some members of which go the length of land nationalization and obtain the support of the Nationalist Irishmen, who are largely settled in the Scotch cities. It may thus happen that in the strife of Liberal candidates several seats will be won for the Conservatives. The proposal to disestablish the Established Church of Scotland, which is warmly advocated by the leaders of the voluntary churches, and as warmly opposed by the ministers and many eminent laymen of the Established Church herself, provoked a still more serious split in the ranks of Scotch Liberalism. Mr. Gladstone, in the speeches which he has been delivering as candidate for the County of Edinburgh, has put forth all his powers of persuasion to heal it, by urging the disestablishers to wait, and, since the question cannot be settled by this coming Parliament, not to make it a source of disunion. His appeals have, after loud murmurs from the extreme

men on both sides, begun to prevail, and the appearance of concord is now nearly restored. But it is probable that some of the more zealous friends of the Scottish Establishment who have hitherto voted Liberal, will now vote Tory, and that their defection may cost the Liberals two or three seats. Having regard to these facts, one may conjecture that out of the seventy-two Scotch seats the Liberals will not carry more than about sixty-five or sixty-six, so that Scotland as a whole will show a Liberal majority of from fifty-eight to sixty.

So far, we have been led to predict Liberal victories more or less marked all along the line. But now comes Ireland, where the Liberal defeat will to all appearances be more complete than any of those victories. Ireland has one hundred and two seats, a number somewhat in excess of that to which her population entitles her. Of these it seems probable that Mr. Parnell will carry more than eighty, say eighty-five, the Tories a few more, say ten, the Liberals the pitiful balance, say seven. These are, of course, mere guesses. Mr. Parnell's total may sink just below eighty, and the Liberal total rise just above ten, though this is far from likely, for even in Ulster, where alone the Liberals have a chance of success, the Roman Catholic vote is strong, and will probably be thrown either against them or not for them. Thus Ireland will apparently show a majority against the Liberals of something like eighty-five.

Taking the results of the two smaller kingdoms, and setting the adverse eighty-five of Ireland against the friendly fifty-eight or sixty of Scotland, Mr. Gladstone will find himself in a minority of (in round numbers) twenty-five, and must therefore obtain a majority of twenty-five in England in order to be on a level with his Tory and Nationalist antagonists, and of at least fifty in order to obtain such a working majority as would enable a Government to carry on its business in Parliament. The vital question therefore comes to be, Are the English pollings likely to show a majority of at least fifty for the Liberals? and this question will be mainly determined by the action of the counties, which have hitherto been predominantly Tory, but on which the Liberals now so confidently count that they may be heard regretting that the borough pollings, where they expect less success, come before the county pollings, so that the moral effect of the victory they expect to score in the counties will not tell on the borough elections.

I have given the reasons which induce good observers to believe that England and Wales, and especially the English counties, will give a large Gladstonian majority. It is not likely to fall below fifty; it may rise as high as seventy—some not contemptible judges put it still higher, for there is always a tendency with us for the party which begins to win to go on winning further than was at first expected, so great is the power of a wave of feeling. A majority of seventy in England and Wales would mean a majority for the United Kingdom of about forty-five, which would be practically as useful to a Ministry as one nominally larger, which, just because it was larger, might be more apt to break up into sections.

The calculations I have given come chiefly from Liberal sources, because Tory sources have kept their information more strictly to themselves. Although they seem to me to contain the most plausible forecast (else I should not give them), I must repeat that the circumstances of this election are so novel that no prophecies are of much weight. Some great surprise may be in store for us. Y.

RENAN'S NEW DRAMA.

PARIS, November 20, 1885.

"LE PRÊTRE DE NEMI," the new work of Renan's which has just appeared, is called by himself a "philosophical drama." The two words do not often go together: there is nothing dramatic in the study of the problems which occupy the philosophical mind. The drama is the play of human passion; human intelligence is the adversary of the natural and unbridled instincts which are the great dramatic forces of the universe. It is clear beforehand that a "drame philosophique" can in reality be nothing but a succession of conversations, of dialogues; the dramatic element, if it is brought in, must be so quite artificially. We can hardly dramatize Plato's dialogues; but a clever writer might imagine a sort of a drama in which Socrates and his disciples should appear; he would bring in Aspasia and some imaginary characters, and construct something which would have an apparent life and movement. But is it worth while? A sensible man would always prefer to read Plato as we read him now, rather than to have his thoughts cut up, and given to us piecemeal in a succession of scenes and acts. I do not remember who entitled a succession of small dramatic works "Théâtre Impossible"; it is quite evident that the "Prêtre de Nemi" belongs to a "théâtre impossible." It cannot be put on the stage; why should Renan, then, adopt the forms made for the stage?

The first act takes us far back to the time when Alba Longa was the rival of Rome, and was even more powerful. Rome was only beginning to cover its hills with habitations, and to surround them with walls; Alba was a great city and the queen of Latium. We are on the ramparts, and the citizens arrive in groups to see the sunset and to breathe the fresh air of the evening. Two of them discourse on Rome, which is seen in the distance, a nest of brigands, a danger for the whole country:

"I cannot conceive," says Titius, "that these brigands, who have placed themselves out of the pale of all human or divine laws, should not devour each other."

"Oh!" answers Voltinius, "these are the commonplaces of every-day politics. Division is a mark of life and of strength. Order, conservation are, in this world, the work of repentant anarchists. Every conservator has for his ancestor a bandit. When Hercules had stolen the oxen of Cacus he became an ardent defender of property."

"It is hard to be beaten by parvenus."

"Yes, but in order to triumph you have nothing to do but to wait. The wheel of fortune turns in such a manner that you can neither accelerate nor retard its rhythm. Present revenge is impossible; defeat is certain. We are more advanced, more civilized than they are. Social questions exist for us more than for them," etc.

Now, I ask, can you not place these exact phrases, without changing one word, in the mouths of two Parisians who have met at a café, and who discuss social questions and the question of the *revanche*? We are really not in Alba, we are on the boulevard; Voltinius is a journalist or a professor, and Titius is a "bon bourgeois."

Titius wants to preserve the old religion. He believes in the oracles of the Sibyl. He does not like Antistius, the high priest of Alba, because Antistius is progressive. The old customs of Alba required that the high priest should kill his predecessor with his own hand; and another "bourgeois," Dolabella, says coolly: "The priest whom we have is not serious: he has not killed his predecessor, as the custom requires." We see at once that Antistius is to be the hero of the drama. He has proposed that the priest should be elected. "Why," says Dolabella, "the election of the people can have nothing to do with religious matters: the people cannot dispose of the *sacra*. There is actually no priest of Nemi." And Metius explains that fate is a better light than the suffrage; but there must be no doubt—to doubt is the real evil. But "kill the man whose place you take"; this is perfectly clear, easy to see; it makes competition impossible.

Antistius has put an end to a tradition of blood and horrors: he might have killed his predecessor; he would not. Sword in hand, he bade him "Live, infamous old man! I pardon you, and I put an end to human sacrifices." But Antistius is looked upon by many as a false priest, as a usurper. He is not well understood, and who can wonder? for Antistius is no other than Renan, transported by miracle from Paris to Alba Longa. His ideas are as intelligible there as they probably would be at the present day at the court of Dahomey. Antistius preaches in the desert; in vain does he explain to those who come to the temple with five human victims, which they wish to sacrifice to obtain the cessation of a malady which desolates their country, that "the true sacrifice is what man takes of what belongs to him in order to give to those who are in need." In vain does he shrug his shoulders when the victims themselves are astonished at his refusal. In vain does he refuse the presents which are brought to him by an anxious mother, who wishes to save the life of a sick boy: the mother only becomes angry, and accuses him of a wicked indifference. In vain does he explain to the deputies of some tribe who ask him for a new constitution, and wish him first to perform some rites, that constitutions are not miraculous things—that they must be inspired by reason and by good sense. Nobody understands him, and Antistius exclaims:

"Is it worth while to devote one's self to a vile race, fatally given over to error? It is evident that I shall soon be lost. If it was only to the profit of somebody or of something! But no; I see before me only an ungrateful earth and a sullen sky. Faith! hope! why have you left me?"

Antistius is not a blind fanatic, no more than Renan: he sees clearly that "mankind needs narrow thoughts; that man wants a god for himself, a sort of a companion; that he wishes to have conversations with the ideal, as if the ideal was somebody." Then why does he go on with a part which can lead to no result? He knows that his work will be barren, and he continues his work; is it pride—love of truth—a philosophical sort of dandyism—uncontrollable flight towards the higher law? Is it also the contempt of realities, and perhaps a want of true and profound sympathy for the weaker portion of humanity, for the simple, the ignorant, the blind, the deformed? It is a little of all that; Antistius has not read the Sermon on the Mount; he does not know that the Kingdom of Heaven is promised to the sufferers as well as to those who can heal the suffering, to the ignorant as well as to those who destroy ignorance. Antistius is really selfish, and all his fine phrases, his sentimental and poetical effusions, cannot much deceive us. When his Sibyl Carmenta confesses her love to him, he quietly tells her that "the divine missionaries must be loved more than they can love themselves, but that women can be allowed to kiss the end of their toga and to wash their feet" (this is an evident allusion to the well-known scene of the Gospel).

With such a progressive high-priest, the citizens of Alba become uncomfortable; and the old aristocrats, such as Metius, think that the only cure for the troubles of the city is war. War is therefore declared against Rome. The leaders of the war party go to Antistius and ask him to persuade the Sibyl to give oracles favorable to the Albans. "Our men," they say, "are going to die for their country; you really must give them some reason for dying." Metius, if he

really was Metius, would surely not speak in this ironical vein. Antistius, of course, refuses to inspire the Sibyl; he does not like war. The idea of fatherland is an old-fashioned idea, which he has rejected: he is not an Alban, he is a man. He declares that he feels incapable of inspiring in others any military ardor. He declares himself ready to receive death; he will not give it nor help others to give it.

Metius, who represents the old-fashioned ideas, reasons in vain with Antistius; he has no more influence than Liberalis, another Alban, who sees far in advance:

"Ah, priest of Nemi!" he says, "I perceive what the future will be if the world is given to you and yours. The priest, in his gown, the soldier clad with iron, both apart from civic society, will not be able to understand each other; one will live in his temple, the other in his fortress. . . . Priest and patriot will become irreconcilable terms! Oh, fatal limit of human nature! Must we become odious in becoming too perfect, must our wisdom preclude us from advising a woman, a soldier, a child? You disgust me with the priest who has too much horror of blood. Such a priest ceases to be a man."

Here and there is a scene between low, comical types, who represent the coarse instincts. Leporinus, for instance, dislikes war as much as Antistius, but for very different reasons: "Let us enjoy this world. It is not a serious work, it is a farce, the work of a jovial Demiurgus. Gayety is the only theology of this huge farce. You should first of all avoid death. Death is the irreparable fault. Whoever gets killed, never mind for what, is a fool."

The philosophy of Antistius helps him but little between the cowards and the patriots, between the aristocrats and the people; he confesses in the end to Liberalis that he has made an error. He gives in, he abandons the struggle: "A truth is only good for the man who has found it. What is one man's food is another man's poison. . . . I wanted to make man better. I have made him worse. . . . My expiation is near; they will kill me."

In Alba Longa they did kill Antistius. In Paris, in the nineteenth century, they buy his books, and read them with a curious mixture of enjoyment and of perplexity. They make him a member of the Institute, they do not elect him a legislator, and it is not much to be wondered at, as there is no legislation which can thoroughly satisfy the idealist. Antistius has no convictions left; he has believed and he has ceased to believe in everything; he lives between heaven and earth—he is a sort of Ariel. In the drama, Antistius is killed; it was impossible that it should be otherwise. His assassin becomes, after the old fashion, his successor, and reëstablishes the old rites. Human sacrifices will now be allowed, and Alba will triumph over Rome. Here Antistius has his revenge; at the very moment when the revolution succeeds, comes a messenger from Rome announcing that Romulus has killed his brother Remus. Rome has now a master, a King, who will lay the foundation of the greatest empire in the world. The Albans have a prisoner, a prophet of Israel, who has seen and understood all, and, in the general confusion, he utters this word of Jehovah: "The peoples shall labor for vanity, and the nations for the fire; and they shall be weary" (Jeremiah, li. 58).

I will, in another article, speak of the curious preface which M. Renan has written for this drama, "Le Prêtre de Nemi."

Correspondence.

PHILADELPHIA'S PROVINCIALISM.

To the Editor of The Nation:

Sir: In your late article (page 439) on "The Lesson of Philadelphia," as the most provincial and the least progressive of all our large cities, the first paragraph ends with these words: "So the city has gone on, year after year, hugging the comforting delusion, while the rest of the country has smiled at its self-deception, and wondered how the spell would ever be broken." The article closes with these words: "And the confession is at last extorted from Philadelphia herself that the city is still drivelling in its swaddling-clothes. History never recorded a more impressive lesson in political economy."

I beg you not to consider the narrow effusions of the Philadelphia papers you quote as really speaking for the business men of this suffering city. The thraldom we are in is the *provincialism of our newspapers*, and the fatal grip the Pennsylvania Railroad Company has had upon our enterprises, *including them*. We hail the coming of the Baltimore and Ohio Railroad into our midst with unfeigned joy, as we would also an independent, strong, able, honest daily newspaper. The field here is fallow for both.

What other city in America or Europe, of a million of people, can be named that is dependent upon one through-line of railway for its transportation? The Pennsylvania Railroad Company has prevented me and thousands of others absolutely from adding to the industries and enterprises of this geographically well located "village"—with its two fine rivers, deep and broad enough to take the largest ships to and from the ocean, and with all the inherent wealth within and adjacent to us. Without a doubt the railroad situation is the cause of our stagnation, but a revolution is here, and with the change *the spell will be broken*. Many of us have realized the iniquitous, unfair, and unwise abuse of power by the Pennsylvania Railroad Company, and have struggled for a long while in vain against it; but thank God (I say it reverently) "the day of the deliverance of this commonwealth draweth nigh."

Such sentiments as these can have no entrance into the columns of a Philadelphia newspaper. May they have in yours? What paper here can be named as a fearless, independent educator of the masses of the people? We are hungry for one.—Very respectfully,

Wm. W. Harkness.

No. 324 Walnut Street,
Philadelphia, December 1, 1885.

To the Editor of The Nation:

Sir: I am willing to admit the soft impeachment of the greater part of your article on Philadelphia in the last number of the *Nation*; but to some points I must take exception. You say that Philadelphia "is falling into decay." This is, I think, a mistake. A city which every year increases her population and builds three or four thousand new houses, cannot be suffering from a very rapid rot. There is no denying that Philadelphia is the most unprogressive city of her size in Christendom. She is always twenty-five years behind the age. But that position she maintains. She always marches far in the rear, but she never turns round and marches backward. If reckoned from the beginning to date, her material prosperity will be found to have constantly increased, and in all human probability it will continue to increase. Her business methods, though not brilliant and modern, are steady and safe; and her population enjoy, perhaps, more comfort and happiness than the people of any other large city on earth.

But when it comes to the higher walks of civilization, literature, the fine arts, statesmanship, science, or intellectual investigation and effort of any sort, Philadelphia is a woful failure. It is strange that a city numbering a million souls, a city which in population and territory is classed with London, Paris, and New York, a city which in fact is the fourth large city of the world, should in these respects have nothing to offer.

You have sought a cause for this in the protective tariff. You say that protection has built up an unnatural system of industry which has taught the people to rely on Acts of Congress and not on their own energy and enterprise. This I beg leave to doubt. I am no particular friend of protection; but I do not think so badly of it as to charge it with Philadelphia's degeneracy. If protection were the cause, it would produce the same effect in other places. The true causes lie deeper, and had accomplished most of their work long before the protective tariff was thought of. These causes I conceive to be the influence of the Quakers and of the Pennsylvania Dutch.

The Quakers founded Philadelphia. For the first hundred years of her existence they controlled her principles and policy. Since then their influence, though gradually diminishing, has always been great. The history of these people is full of acts of heroism and benevolence; but the essence of their belief is resistance to change of every sort in dress, customs, and ideas. They never doubt and they never investigate. They are incapable of intellectual inquiry, and they hate it. They had the opportunity of moulding Philadelphia when she was young; they used it, and gave her a twist which she will never outgrow.

The Pennsylvania Dutch, so called, came out at various times in the early days of the colony, and by the special request of William Penn. They multiplied rapidly, and have penetrated to every part of the State. Their ubiquity can be seen in the names of persons and places, and the faces and language of the people. They are thrifty, peaceable citizens, but they never rise higher. Large numbers of them still speak a dialect compounded of bad German and worse English. Many of them can scarcely understand any other language. They have religious beliefs and ceremonies so strange that those who have not seen them often doubt their existence. They are far inferior to the Quakers; have less natural ability, less education, less refinement. High progress among them is an impossibility.

Such were the people who composed a great part of the native population which in former times shaped the destinies of Pennsylvania and Philadelphia. Their descendants are still with us—somewhat changed, it is true: dragged by force of circumstances and the rush of modern civilization into a little improvement, but always holding back and resisting with all their might. When the mass of the people are of this character, the efforts of the progressive few are in vain. As a consequence, Pennsylvania has no State pride, loves mediocrity, and is devoid of intellectual ambition. Pennsylvanians have no keenness of mind, never reason closely, but follow vague sentiments and generalities. They are the material that a demagogue delights to contemplate, and among no people does he meet with greater success. Nearly all of the thirteen original States have contributed their share of the country's great men. But Pennsylvania, though an old State, and though possessed of several large cities, great mineral wealth, a fertile soil, and a wholesome climate, has produced no great men at all. It is true, Benjamin Franklin lived in Philadelphia, but he had to be imported from Boston, where he was born and received his early education. Pennsylvania never sent a great man to the Senate or to the House of Representatives. She never produced a man who was great as a thinker, a philosopher, a statesman, an artist, or a poet. She never even produced a man who distinguished himself in light literature. There are towns of less than fifty thousand inhabitants in

the old States, and in some of the new States, which have done more for literature and art in the last fifty years than Pennsylvania has in her whole existence.

In saying this, it must be admitted that Philadelphia has always been famous for the skill and learning of her physicians, and was at one time famous for her lawyers. She was, however, never able to do anything with her lawyers outside of their profession. John Sergeant, Horace Binney, William Meredith, and David Paul Brown were never anything but lawyers. Horace Binney was universally admired and beloved for his agreeable manners and unusual ability, but it is a noteworthy fact that he, in many respects the finest man Philadelphia has ever had, was always opposed to progress. He opposed the introduction of gas and water into the city, and could always be relied on to stand out against improvements.

I am sorry to have taken up so much of your space, and the more so because I feel sure that discussions like this are useless. Every man who knows Philadelphia knows that to change the current of thought in that city is beyond the power of the press. All that the small minority of the progressive can do is to express their opinions, and have their labor for their pains.

D. G.

PHILADELPHIA, November 30, 1885.

TO THE EDITOR OF THE NATION:

SIR: There must be many persons who, like myself, have long felt the truth so plainly set forth in your article on "The Lesson of Philadelphia," in No. 1065 of the *Nation*. I frequently find some kindred spirit in this respect in Philadelphia, and, with bated breath, we pour out our souls to one another. I am a native of another part of the country, and have for half-a-dozen years been living in one of the suburbs of Philadelphia; and, having become much attached to this ugly city and its delightful people, I have longed for some authoritative voice to reveal to them that the world was not bounded by the Delaware and the Schuylkill. It is too much to hope that your able article, or even the awakened consciences of the *Times* and the *Press*, will effect a conversion, but they may make the question to be asked in Philadelphia, "Is, then, salvation come to the Gentiles?"

Your analytic statement of the cause of Philadelphia's narrowness of atmosphere, as lying in her devotion to protection, is quite just. Your article, however, did not trace this protectionism in any other lines than the commercial and political. The remarkable thing about Philadelphia, the thing which makes the city so interesting as a "case," is the thoroughness with which this principle of protection has permeated here every side of life—civic, social, literary, ecclesiastical, religious:

"As saffron tingeth flesh, blood, bones, and all."

One can see it plainly in the social life, for example. Generalizations as to society in any place are dangerous, because the society taken as typical may not be so. But the verdict of the common proverb, which Philadelphia has never repudiated, assigns to her as the first thing to be asked of a stranger, the question, "Who was your father?" This verdict is certainly just. Genealogy and the history of marriages are here the recreation of middle-life and the employment of age; and even the babies are believed to be able to count their cousins to the third and fourth generations on their fingers. Most of us, as we approach middle life, are interested in remembering who married whom; but most of us, except professional genealogists, approach the subject with the consciousness that it is a little outside of the ordinary course of our thought, like the remembrance of the dresses we wore at the age of ten or thereabouts. But to the Philadelphian, the subject is as much a matter of course as the multiplication table, an element to be taken for granted in the mental constitution of everybody you meet. Now, the history of relationships can only be interesting where most of the parties concerned are known; and this is only the case in a society which has intermarried largely with itself and had little outside admixture. And here is one of the causes of Philadelphia's just pride, that so many of her families have preserved name and place unbroken through so many generations.

The fact that interest in the family affairs of one's neighbors bears so prominent a place in the mental constitution of Philadelphia, accounts, too, for another fact that is often spoken of both by inhabitants of the city and by outsiders: this is, that there are here no able newspapers. In quantity they are numerous enough, but they are lacking in quality, like the talk at a girls' boarding-school; and for much the same reason. I do not know how many papers are published in the city, but as I hear them cried in the streets, they seem numberless. And yet—and it is the one anomaly in a Philadelphian's partisanship—almost every inhabitant will tell you with a certain air of disgust that the newspapers here are anything but able. The people are inclined to lay the blame on the papers, or on "proximity to New York"; but the papers may with much more justice lay the blame on the people. Newspapers will furnish that for which there is a demand, and that for which there is no demand a newspaper cannot afford to furnish. I have been told that one and another newspaper, as it has started here, has tried to furnish material from a wider range, more universal in interest; but in every case it has been compelled in self-preservation to narrow its horizon. Not that it must not have foreign news: the resident of Arch Street wishes to know what is going on in the Balkans and Berlin, particularly the latter, for there comes a warm feeling around his heart as he reads of Bismarck's protective leanings. But the subjects on which the paper's main stress must be laid—and differences of character are, after all, differences of stress, since all elements of human nature are in all of us—are local events, social and commercial, and those doings of Congress which affect Pennsylvania. The result is that murders, fires, arrests, reports of meetings of all kinds, all the worthless débris of life, are the main staple of Philadelphia's newspapers. These occur, it is true, in the papers of other large cities, but in those of this city they have an abnormal proportion. Philadelphia has no great interest in what goes on outside her immediate circle, and the newspapers do but reflect that state of mind.

An old resident, typical of the typical generation now passing away, once made a remark illustrative of the attitude of such a Philadelphian toward his city. His son was about to remove for a year or two to Baltimore, and a friend said to the young man: "Well, it 'll be a good thing for you to go to see the world and get acquainted with life away from home." "No," said the old gentleman, seriously and without a shade of humor; "I consider every day spent out of Philadelphia which might have been spent in it as lost time." And this of a city whose wealthy houses present fewer attractions outwardly than those of any other large city; whose common houses extend for six or seven miles, small and maddening in their monotony of brick and white marble; which has no free public library, and whose Academy of Fine Arts is filled, apart from a small proportion of pictures changing from year to year, with old works whose former local celebrity is their only value. Philadelphia has not only protected herself from foreign competition in her manufactures; she has protected herself most successfully from the inroads of foreign ideas.

It is the same with her ecclesiastical life. Quakerism was at its beginning a movement full of innovation, vitality, and power. It has lost these, and become, as a regenerative agency, utterly dead. But its legacy still remains in the form of a spirit of the blindest conservatism diffused throughout the community, an almost religious frenzy in preserving everywhere the *status quo*: "as it was in the beginning, is now, and ever shall be, world without end." The form of religion most fashionable is the Episcopal, and the style of churchmanship most common is largely Evangelical in its theology and High in its tone. It is the historic side of ecclesiasticism that has most interest for the Philadelphia churchman, and Bishop White and the English Church and the early councils are of more importance in his eyes than the grounds of intrinsic reasonableness at the basis of any usage or doctrine. It is the same with the religious life of the individual. He has been brought up to be religious, and consequently nowhere has religion such a naturalness, such a grace about it, as here. But he does not care to hear new ideas that confuse the established adjustments of his religious world. Religion is a protected sphere. I have never seen young men, whose religious life was developed to so great a degree, in whom it was so little affected by intellectual life. A New Englander, for example, is brought up to regard himself as outside the kingdom of heaven. He has therefore to fight for his soul; and the result is that, if he ever gets it, which is somewhat doubtful, his religion is apt to bear the scars of his conflict, to have a somewhat hard and conscious aspect, but also to go down to the deep things of the universe and be securely founded. With the Philadelphian, religion wears a far more gracious aspect, but is less deep. The philosophical tendency is subordinated to the historical; religion as it has come to him is of more interest than religion as it essentially is.

It may be said, "Why criticise the workings of one and the same principle in these different departments, without suggesting a remedy?" It would be almost impossible to name a remedy that should have any immediate effect in the cases mentioned. It must be a long time before renewed vitality creeps into the nerves and muscles of a patient who is "run down." But there is one department where a change of present policy might have much direct effect upon the life of the community; and that is, the University of Pennsylvania. I do not mean that such change would be possible if this should cease to be the headquarters where protection is taught as a doctrine of political economy, for Philadelphia's regeneration will probably come in other respects sooner than in this; but a renovating change would begin if the principle of protection should cease to be applied to the policy of the University itself. The institution has no dormitories. Students, therefore, who do not live at home, board chiefly in private families. It being the case that no provision is made for students from a distance, few such come, and the great majority of undergraduates is composed of those who live in Philadelphia and its neighborhood, and who come and go every day between the University and home. Some years ago the trustees had a large legacy offered them if they would build dormitories. After consideration, they declined it, as it would involve a change in their whole policy. The aim of this policy is to train boys up in the way they should go, meaning by that, so that they will regard Philadelphia doctrines, ideas, atmosphere, and surroundings as final. The result is, that the institution is an advanced kind of high school, where

the scholars go and recite their lessons, are marked, and then go home again. It is needless to say that the principles of the new education, as set forth so ably in the *Andover Review* for November, find no place nor favor here. "I do not believe in trying that sort of thing with boys," was the remark made to me of the matter. Such opinions are unconsciously based on experience furnished by the University of Pennsylvania, and, thus applied, I should concur in them. It would be utterly unwise to attempt to introduce the system in full operation at Harvard at once into this University. A foot-ball player here, in explaining to me the causes of the defeat of the University by another college team, said: "Their men, you know, are much larger than ours." "How so?" said I. "What is the average age of your men at entrance?" "Sixteen." One has only to compare this, even allowing the number to have been a round one, with the fact, given in the *Andover Review*, that the average age of the students who entered Harvard in 1884 was eighteen years and ten months, to see that it is boys who attend the University rather than young men.

Such a state of things is a positive harm. It is not merely that the University furnishes education of a second-class character, but it prevents many bright men who are capable of a first-class education from receiving it elsewhere, by persuading them or their parents that what it has to furnish is just as good. There is a large number in every college in regard to whom it makes little difference whether the opportunities furnished them are first or second-class. They will get about as much from one as the other. But the "remnant," the bright men with possibilities in them, are a college's most precious opportunity. And it is just these who are the greatest sufferers from a system that gives them a provincial tone for life, instead of imparting, as a university should, an element of universality.

It would, perhaps, be difficult for one who does not know Philadelphia, who should read remarks like these, to understand the charm for one who has lived among them of the kind, hospitable people, and even the attraction of the city itself. They are a remarkably homogeneous people. This is their aim, their pride, and their defect. It certainly says much for the power of the principle of protection, that it has succeeded in erecting such barriers between the world and them, penetrating every department of life, and keeping them shut in as in a mountain valley.

B. J.

THE AUTHORSHIP OF THE 'VESTIGES OF CREATION.'

To the Editor of The Nation:

Sir: I should like to know your authority, in the *Nation* before last, for the assumption that Robert Chambers wrote 'Vestiges of Creation.' He was once about to be nominated for a high office in Edinburgh, but the objection was made that he had written that book. He said that he had not written the book and should not take the office. My authority is Mr. Basil Bell, a teacher of Edinburgh, remarkable for the extent and the accuracy of his information. The 'Encyclopædia Britannica' says that neither himself nor any one authorized to speak for him acknowledged the work as his. John Fraser.

Boston, December 2, 1885.

[The twelfth edition of the 'Vestiges of the Natural History of Creation' was published by Messrs. Chambers, of Edinburgh, in April, 1884, with the name of Robert Chambers on the title-page as author. W. Alexander Ireland, in a preface to this edition, gives an account of the means taken to conceal the name of the author at the time of the original publication of the book. Our correspondent speaks of Robert Chambers having stood for "a high office in Edinburgh," and avers that "he said he had not written the 'Vestiges.'" The office here referred to was that of Lord Provost of Edinburgh, for which he was a candidate in 1848. The rumor that he was the author of the 'Vestiges' was then used to his disadvantage, but we are not aware that he then, or at any other time, stated that he was not the author of the book.—Ed. Nation.]

CONSUMPTION IN MASSACHUSETTS.

To the Editor of The Nation:

Sir: In the article entitled "Prolonging Human Life," in the *Nation* of this date, it is stated that "the experience of Massachusetts goes to show that medical science is really succeeding in doing something to check the ravages of" consumption, and that the vital statistics of that State "show that the number of deaths from consumption has fallen from an annual average of 3,716 per million living persons in the decade beginning with 1857, to only 3,130 in the decade closing with 1884."

That the progress made in medical science, especially during the last two decades, has lessened the mortality from many diseases, is undoubtedly true. Before concluding, however, that consumption has been diminished in Massachusetts by medical science to anything near the extent indicated by these figures, it would be necessary to know whether the number of those sick with consumption that have permanently left the State for Western or Southern climates has not been much greater of late than formerly. It is well known to the medical profession that the climatic treatment of phthisis is by far the most successful; and it is believed that the number of consumptives sent away from New England for other climates is much greater of late than twenty or thirty years ago.

Hartford, Conn., December 3, 1885.

NEW HAMPSHIRE FIRE INSURANCE.

To the Editor of The Nation:

Sir: I noticed in your edition of two weeks since an editorial wherein you represented all insurable and business interests in this State as in a condition of awful confusion and dismay. Now, I suppose that you are fully graduated in the school of the Springfield *Republican*, which considers it fatal to the character of a newspaper ever to own up to a mistake or to a false conclusion—a sound doctrine when honesty ceases to be worthy of respect—and I ask nothing of this sort.

I make no defence of the "Valued Policy Law," which, like most laws that interfere with business habits, is a foolish law; but the indirect result of the insurance companies having left the State in the way they did is going to prove, in the opinion of very many business men in this State, a very great benefit and saving to this State, and perhaps ultimately to the country at large.

In your article, in quoting Mr. Cheney (if I remember aright), you write as though the putting in precautions against fire were a hardship, instead of being the wisest and most economical business course. As results of this thing, very many manufacturing industries which formerly paid from 2 to 4 per cent. premium now get their insurance in the different mill mutual companies for practically about one-quarter to one-half of 1 per cent. The danger of fire is made almost nominal.

But the question should be looked at by the *Nation* from a purely public standpoint. Do you realize the direct cost to the country each year from fires which are set for the sake of obtaining more than the real value from the insurance companies? Well, I believe this sum is from $15,000,000 to $40,000,000 each year. Of course this makes the country at large so much poorer, does it not? To the insurance companies, if they can get enough additional premium from their honest customers to net them a fair dividend and growing surplus, it is very properly (I am not finding fault with them) all that they concern themselves about. But to the country at large, it seems to me, it is a most momentous question to devise some system which shall prevent this over-insurance, and at the same time make it for the interest of the owner to prevent fires in every way possible. Better (from a public point of view) have *no* insurance, with all the incidental individual hardships, than the present horribly, recklessly extravagant method, with its accompanying crime.

Possibly one or two years hence, when the total fire losses in this State, with all the incidental cost, shall show a reduction of one-half the old-time cost to the State, your editorial eye may not look down in such pitying contempt on the Granite State, even though the legislators do have their hair full of hayseed, and certainly do not know much about law-making.

Very respectfully yours,

C. B. Rice.

Claremont, N. H., December 2, 1885.

THE UNIVERSITY AT HOME.

To the Editor of The Nation:

Sir: In the *Nation* of November 26 a correspondent, Mr. E. R. Sill, suggests that we ought to have a great University in the European sense. The idea is, of course, an excellent one and has often been pleaded for, and sometimes with skill and enthusiasm, and by men eminently qualified to speak of the subject; as by President White, of Cornell, before the National Educational Association in 1874. But the plan, I fear, will never be successfully carried out before another thing is done. What we need as yet is not so much the University as the *students*. There is still almost wholly wanting among us that higher ambition in our young men which is necessary in order that a university may live and thrive. We need the ambition that would go beyond the studies required for practical purposes, that would go beyond the bread-and-butter studies. And to produce and foster such an ambition, it seems to me, is not by far so difficult as seems to be generally supposed. Let us imagine that we had a National Scientific Association, composed of the foremost scientists in the country, and that this Association had a fund from which it could offer prizes for original scientific research. The honor itself of gaining such a prize would be a sufficient stimulus for many a young man, whether in college or out, and the distinction thus won would be a great help to him. By this plan the deserving and gifted young men would be brought to the front, and would take the places now too often taken by hopeless mediocrity. Many a dormant talent would come forward, and in a few years we should see a scientific enthusiasm never before witnessed.

We are still pursuing what the *Nation* sarcastically calls the "brick-and-mortar policy." Governor Stanford, as Mr. Sill tells us, is putting single-handed some twenty millions into an institution in California. Let us imagine half that sum, or one-fourth of it, as a fund from the interest of which prizes were offered for original scientific research. Most certainly, if these prizes were given only upon the judgment of our foremost scientists (not belonging to one or two

colleges only, but to five or six of the foremost), the incentive to gain such distinction would be very great.

It is true we may look with pride upon the astonishing liberality so often shown in this country in endowments and gifts for educational purposes. Now, if some of our eminent men of science would advocate a plan like the one here suggested, might we not reasonably hope that such endowments would be really made, and that they would be productive of splendid results?—Yours truly, WERNER A. STILLE.

HIGHLAND, ILL., November 29, 1885.

JOHNS HOPKINS HOUSE OF COMMONS.

TO THE EDITOR OF THE NATION:

SIR: Although the correspondence concerning our modest "House of Commons" has doubtless already consumed too much of your valuable space, I hope that in justice to that body you will grant a few words to one of its members. In the *Nation* of December 3, "J. H. U. '83" takes upon himself to charge the Hopkins House of Commons with the introduction of Anglomania into the Johns Hopkins University—an accusation which I consider it my duty to resent as a member of that organization.

Your correspondent, having admitted the superiority of a mimic constitutional assembly over the stereotyped literary society, suggests as a model the House of Representatives, in preference to the British House of Commons. In vindication of our choice, I deem it only necessary to point out two cardinal instances in the methods of procedure practised by the two bodies, wherein that of the British House of Commons is better adapted to meet the requirements of a debating society than that of the lower house of Congress.

Firstly, it presents absolutely no check to debate, and although your correspondent distinctly asserts that "it was a very happy thought" to establish a mimic House, where "embryo Gladstones and Parnells move the previous question," I would respectfully inform him that the underlying virtue of the constitution of the House of Commons, at least in so far as it concerns the case in question, is that it positively prevents "embryo" (or in fact real) Gladstones and Parnells from moving the "previous question." When, however, we compare with this the opportunity afforded for debate by the rules of the House of Representatives, we are at once opposed by an intricate system of committee legislation, and an unlimited play of the "previous question," which has become so oppressive that, to quote a correspondent in a recent edition of the New York *Herald*, it has "crippled and disabled the House, and very greatly diminished its influence." It must therefore be evident, that to modify the rules of the House of Representatives by abolishing the various committees and the use of the "previous question" until they should conform to our needs, the identity would so far be lost that we should hope in vain to secure the object desired by "J. H. U. '83"—"to familiarize our future statesmen with the forms of procedure practised in Congress."

Secondly, our Constitution offers continual incentive for debate, for scarcely had our "House" been organized when there at once rose a party line which had been constantly growing better defined; and inasmuch as on the defeat of a Ministry a new one *must* be appointed from the ranks of the Opposition, the one side is always striving to retain the honors and the other to win them. In a mimic House of Representatives, the only honor would be the Speakership, in which, at best, a change could only be made by election, every two or three months, while in our "House of Commons," the honors may be won at any moment by an Opposition made willing and anxious to debate by the prospect of "assuming the toils of office."

So much for a mimic House of Representatives. As for a Senate, fortunately another correspondent in your last number, in adding a laudatory word for such organizations, has given us the experience of a mimic Senate established at Union College, which, "after a period of inactivity," was only reëstablished when a member of the Faculty acted as President of the "Senate," and the Senior Class furnished a committee to act as a "House of Representatives."

In closing, I would say that I consider the charge the more recklessly made in that Mr. Langdon Williams has explained that we discuss only such questions and topics as are germane to American politics, and leave the problems of Disestablishment and the Irish question to be solved by Lord Salisbury and Messrs. Gladstone and Parnell.—Respectfully,

A MEMBER OF THE HOPKINS HOUSE OF COMMONS.

BALTIMORE, December 5, 1885.

"AN ABSURD SOLECISM."

TO THE EDITOR OF THE NATION:

SIR: It is pleasant to see scholars jealous for the purity of our mother tongue, but does not your correspondent (in this week's issue) put his case rather strongly when he pronounces *laugh* and *sigh* intransitive verbs, as if that were an end of the matter? According to the dictionaries both verbs are transitive as well as intransitive. "Sigh a note and sing a note," says Shakspere; and again, "Laughs out a loud applause." Such examples are not parallel with those cited for condemnation, I am aware, but the author of the story under criticism might fairly adduce them in mitigation of his offence, I should say. Dr. Calkins would perhaps suspect me of laughing him to scorn were I to refer him to the book with which he is presumed to be most familiar, for another (though less pertinent) use of *laugh* with an object.

As for the employment of *interrupted* in the manner complained of, it has at least the sanction of Hawthorne's usage. I venture to think, however, that he never dreamed of regarding the preceding "clause in quotation marks" as the object of the verb, surprised as he would have been at hearing the latter called intransitive.

T.

BOSTON, December 5, 1885.

THE FRENCH METHOD OF ELEMENTARY DRAWING.

TO THE EDITOR OF THE NATION:

SIR: That so-called French method of elementary instruction in drawing, which consists in resolving all rounded forms into angles, and all gradations of shade into flat fields, and which has, with more or less modification, been widely and rather hastily adopted in our country, has been criticised more than once in your columns; and the fact that it was but a blundering experiment, which had its origin in Paris not many years ago, has been pointed out. The intrinsic demerit of the system can hardly be too often commented upon, or its absolute departure from the methods of the great schools of the past too often reiterated, so long as it still continues to find favor. It is encouraging to find that this system has already been largely abandoned in its original seat, and that better methods are gradually taking its place here. I do not know that any more clear-sighted criticism has appeared on this subject than that which is contained in a pamphlet published a few years ago, but which has just come under my notice, entitled 'Coup d'Œil sur l'Enseignement des Beaux-Arts,' by M. Lecoq de Boisbaudran, late director of the National School of Drawing in Paris. I freely translate a few paragraphs as follows:

"To decompose systematically into squares, angles, and triangles, all the forms of nature even to the human figure, cannot fail to alter profoundly in the minds of easily impressed children the idea of the true form. In thus suppressing all grace, all flexibility, all delicacy; in incessantly imposing upon the attention of these young minds these misshapen masses, this coarse squaring, the delicate flower of the sentiment of beauty and harmony is destroyed in its germ. The origin of these pitiful processes of instruction dates only from about thirty years ago, when appeared the strange method, now happily almost forgotten, which consists in requiring pupils to copy, with stump shading, a progressive series of plaster blocks. The first of these blocks indicate the mass of a head without any of the features of the human face. In the second block certain projections, cut at right angles, stand for the leading features. These rough masses gradually become less and less unnatural till in the final one something recognizable as a human face appears. A copy of this last, executed with the stump, terminates the series of studies.

"These fine inventions, praised and exalted by a friendly press, as destined to give the most rapid and marvellous results, were promptly received and employed, even in the most distant provinces. A minister of that time adopted them as constituting a serious and fecund method, and ordered their use in the schools of Paris. The results of the official experience were so conclusive, and of such a nature, that it was necessary to abandon the method, and to disclaim any success such as had been so pompously promised.

"This *bizarre* conception has been seriously modified since then; but it is easy still to recognize the origin and the principle of a system of masses in which angles and squares are carried to excess, in the methods which yet serve too often. . . . Not only the beauty but the truth of form is completely lost in the greater part of these models. The fine and pure contours of the antique figures are in them represented to us by broken lines, by angles and sharp points. All curvature, all flexibility, seems a license hardly to be tolerated. Such is the fashion—a strange thing at a time when the example and authority of Raphael and of the other great masters of drawing are more than ever invoked. The models thus destined to form the taste of the young are the very opposite of the drawings of these great artists, so remarkable for supple and undulating contours and for intelligently accentuated masses and perspectives of form.

"The contradiction is not less striking as regards relations of tones and of effect. In place of the fine and sober harmonies of the great colorists, we are presented with the most violent contrasts of black and white."

In another pamphlet, entitled 'Sommaire d'une Méthode pour l'Enseignement du Dessin et de la Peinture,' the same author comments on the relative merits of the lead-pencil and the stump as instruments for elementary practice, as follows:

"After many experiments I consider the lead-pencil as the only instrument favorable for first practice. The stump ought to be proscribed, at least in the early stages of instruction. It tends to slovenliness and excess of shade; to roundness and softness. It is often recommended, however, exclusively, as affording facility in quickly covering the paper. But this is to misunderstand the special conditions of instruction, and sadly to confound processes of execution found convenient by certain artists, with those proper in the exercises of pupils. The stump, by the facility which it affords of promptly covering large surfaces, suppresses or at least diminishes the practice of hand, and consequently the development of fineness of touch. More firm, more sure, than the stump, the lead-pencil renders better the impressions of the artist, and expresses them in their most varied shades. The pencil is the intelligent, spiritual, and energetic instrument *par excellence*. The great masters of design have always preferred it."

CHARLES H. MOORE.

PARIS, November 15, 1885.

Notes.

NUMBER 18 of the Q. P. Indexes will be 'A General Index to the *Nation*, Vols. 31-40, Oct., 1880–Oct., 1885,' compiled by Mr. W. M. Griswold,

in continuation of a former one which covered Vols. 1–30 inclusive. Mr. Griswold designates by an asterisk, in this new index, articles which are either special or occasional correspondence—two departments of which we believe our readers appreciate the value, as we hope they do of Mr. Griswold's self-denying labors.

Jansen, McClurg & Co., Chicago, announce the issue of a unique collection of verse under the title of 'The Humbler Poets.' From the mass of ephemeral poetry that has appeared in newspaper and periodical during the past fifteen years, the editor, Mr. Slason Thompson, has sought to rescue the meritorious waifs which have not found an abiding place in collected works. The work makes an 8vo volume of some 450 pages, and some beautiful printing is promised in it.

The *New Princeton Review*—not a revival of the old *Princeton Review*, but a brand-new enterprise—has A. C. Armstrong & Son for publishers.

A veteran abolitionist, Mr. Parker Pillsbury, of Concord, N. H., is fighting his battles over again bibliographically. Not long ago he reprinted a famous effective tractate (1840), 'The American Churches the Bulwarks of American Slavery,' by James G. Birney; and he has now reprinted one of his own, 'The Church as It Is; or, the Forlorn Hope of Slavery' (1846-47). As will be inferred, Mr. Pillsbury's department or specialty, as we may say, was the woful shortcomings of the churches on the subject of our greatest national transgression. To recall these shortcomings now, with as much of the heat of discussion as types can retain after a lapse of forty years, is not to be indifferent to the progress of events. It is simple truth to say that the clerical and ecclesiastical phase of the anti-slavery conflict has lasting instruction for ministers and church members of every denomination. The collector, on his part, will be grateful for an opportunity to secure a rather rare pamphlet by means of this reproduction.

Mr. Cable has gathered into a volume, under the title of 'The Silent South' (Scribners), his two essays upon the social and political status of the negro, which at the time of their appearance were noted in these columns; and has added an earlier article on the convict-lease system as it is found in the Southern States. The showing which this last paper makes of the short-sightedness as well as the gross inhumanity of this mode of prison management, ought to be a stinging shame to the communities which tolerate it. It seems that Siberia is not so far off as we believed. Ten years' imprisonment is, by the statistics, a death penalty under this régime; and the heavy sentences, and the large proportion of half-grown boys among the convicts on long time, are a hardly less severe impeachment of civilization in States that still provide us with the gentleman's duel and the blood-feud. How much of the indifference to the duty of the State to its convicts is due to the prevalent color of their skins, is a question which, though never asked in these pages, is continually put by the reader's mind. It is not pleasant to read in a prefatory note that there has been no essential change in the condition of affairs since the first appearance of the paper. The New South cannot find a better field for its enterprise than in doing justice; and the prison is a good place to begin.

Mr. John Fiske has published a new edition of his 'Darwinism, and Other Essays' (Houghton, Mifflin & Co.), enlarging it with three early writings on Comte's Positive Philosophy, on Liberal Education, and on University Reform. The second of these is a review of 'Essays on a Liberal Education,' edited by the Rev. F. W. Farrar in 1867. Mr. Fiske's views, in his paper on University Reform, of the value of mathematical discipline, and of the desirability of its being required to some extent, have received a rude blow at Harvard from the recent change making mathematics optional even in the Freshman year.

Mr. R. H. Manning has done, in a modest way, a really useful work, in his 'Book-Keeping Simplified' (D. Appleton & Co.). In spite of the practical simplification which book-keeping has undergone in this country as compared with the cumbersome European methods, the art of double-entry book-keeping is still surrounded with more or less mystery to the uninitiated. And yet its theory, as simple as it is ingenious, can be explained in five minutes to any one of average comprehension, and its practice can be acquired, as Mr. Manning says, "by any intelligent youth in a few days, and without keeping a series of imagined accounts." In less than twenty pages he both explains and illustrates single-entry book-keeping, and eight pages suffice for a clear, theoretical account of the double-entry system. The remaining seventy pages represent a cash-book, invoice-book, sales-book, day-book, a trial balance, and an account of stock. No more is required to equip any one possessing a fair knowledge of figures for the beginning of a commercial career, as no two business houses keep the same number of accessory books. Mr. Manning's little compendium will be appreciated both by the novice in book-keeping and by those adepts who remember their bewilderment, after months of plodding through a set of twenty fictitious books, on being first confronted with the simple reality.

An edition of Tennyson's 'In Memoriam' in the familiar Golden Treasury style (Macmillan) needs no recommendation to lovers of the poem and of handy and well-made books.

In place of more or less skilful color studies of Colorado wild flowers, a souvenir consisting of the flowers themselves, pressed and arranged in two sunken panels of stiff cardboard, has been issued by W. H. Lawrence & Co., Denver, Colorado, under the title, 'A Christmas Greeting.' A fern makes the central figure in each group. The tufted blue blossom, in its bunchy growth, is familiar to all who have ascended Pike's Peak above the timber line. A few stanzas applicable to any flowers, and a prose extract pertinent to the Colorado flora, supply two leaves of this four-leaved, ribbon-fastened portfolio, rather than book.

Very pretty as a gift book is 'Friendship's Diary,' published by A. D. F. Randolph & Co., with borders both ornamental and rubricated, and very tastefully bound. Pertinent extracts, in prose and verse, play about the idea of friendship without encroaching too much on the blank space reserved for the day's chronicle. The full-page cuts inserted here and there do not add to the beauty of the book; and a nice eye will find occasional defects in the "register" of the red line. But, as we have said, the total effect is pleasing and well considered.

Among the later arrivals of calendars are the "Grant Biographical Calendar," giving day by day the chief events in his career, with an appropriate sentiment from his writings (Boston: James S. Conant); the "Schiller Calendar," mounted on a highly colored fan, with a block of selections in German and translated (Troy, N. Y.: H. B. Nims & Co.); and, from the same publishers, a "Calendar for the Year," in book form, with twelve leaves, bearing verses by Austin Dobson.

We have to record more misdirected effort and useless expenditure in the illustrated editions of 'The Eve of St. Agnes' (Boston: Estes & Lauriat), with designs by Edmund H. Garrett, and 'Lenore' (Estes & Lauriat), with designs by H. Sandham. There is no mastery here of conception or draughtsmanship; no nobility. Mr. Walter Shirlaw, too, has wronged himself by his inane designs for Goldsmith's 'Hermit' (Lippincott Co.), which it must have grieved so able an engraver as Mr. Juengling to spoil good boxwood upon.

A curious feature of 'American Etchings' (Boston: Estes & Lauriat) is the binding in of a leaf, cut out to form a mat before each plate, so that one is in doubt whether it is a book or a portfolio that one is examining. The title-page promises "twenty original etchings by Moran, Parrish, Ferris, Smillie, and others," but the table of contents shows that the "Moran" is *Mrs.* Moran, that Mr. Parrish is not represented at all, and that three of the twenty plates are reproductive work after other artists. Most of the plates are old, and few of them of any great merit. Mr. Bacher's "Auf Staufa Bruck" is far from the best he has done. Mr. Chase's "Court Jester" is very clever, and so, in its way, is Mr. Brennan's "Divination in Tea-leaves," though the figure is very badly drawn. Of the landscape plates one may say that they show much more knowledge of technical processes than of art or nature. Mr. J. Henry Hill's "Moonlight on the Androscoggin" is, however, hardly an etching at all, the aquatint so overpowers the lines. The text is more amiable than critical, but it is rather a left-handed compliment that, in the note on Mr. S. A. Schoff's etching of Elihu Vedder's "Sea Serpent," not even the name of the former artist occurs.

Volume 30 of the *Century* (May-October, 1885) has McClellan's portrait for a frontispiece, and in its war series a host of other military portraits, including Grant, Lee, and J. E. Johnston, to name no lesser lights. As usual we find specimens or the successive parts of future books—James's 'Bostonians,' the conclusion of Howells's 'Silas Lapham,' and the same author's 'Tuscan Cities'; Stedman's 'Poets of America'; the lives of Garrison and of Samuel Bowles. The series of articles on the New Orleans Exposition also fall (all but the first) in this volume.

St. Nicholas, too, during the past year, has been the begetter of books—'Davy and the Goblin,' and we know not how many more. The twelfth volume is, as usual, divided into two parts so called, bound separately.

In the December number of the *Magazine of American History*, the third paper on the campaign of 1861-62 in Kentucky, by Gen. Baldy Smith, will attract attention like its predecessors. It closes with an acknowledgment, on the writer's part, of an entire change of opinion with reference to Don Carlos Buell as the commanding general of an army. General Smith now thinks him "a general in the highest sense of the term." His opinion of Halleck is evidently correspondingly low.

The Christmas number of the *Art Journal* (International News Co.) is wholly given up to Millais, his life and work, with abundant engravings from his pictures.

The striking feature of the November *Portfolio* (Macmillan) is a photogravure of Burne-Jones's remarkable composition, "Venus's Mirror," in which the forms of the maidens grouped about the pool, and the charming landscape behind them, are, color apart, as suggestive as possible of the beauty of the original.

The works of Rubens, Boucher, and Prud'hon are chief among the illustrations of the most recent numbers of *L'Art*, Nos. 512–515 (Macmillan). Turgeneff's "Assez" is concluded. It is not made quite clear, we think, that this forms no part of the author's posthumous memoirs, as a hasty reader might conclude. The original was published more than twenty years ago, and is bound with 'Fathers and Sons' in the fifth volume of the Moscow edition of Turgeneff's complete works (1874). The title reads "Enough: Extracts from the note-book of a dead artist (1864)." It is one of those brief fantasies into

which Turgeneff could somehow condense a whole drama of human experience. It ends with an English quotation, the familiar "The rest is silence." The translation in *L'Art*, by the way, is little if any better than one of which, as Mr. Senior recorded in one of his conversations, Turgeneff himself said, "C'est à ne pas s'y reconnaitre."

Volume i of the Transactions and Reports of the Nebraska State Historical Society (Lincoln, Neb.) is before us—a crude beginning, such as the State itself had, but an earnest of something better in the sequel, we do not doubt. It is mostly taken up with pioneer reminiscences and biographical notices, and there is little in it of that fierce struggle which we now know to have been the preliminary skirmishing of the civil war. Record is made of Mrs. Bloomer's appeal for female suffrage, by request, in the House of Representatives at Omaha, on January 8, 1856, when the city was little more than a year old. The Legislature came very near passing a bill conferring the franchise on women.

The first edition of William Henderson's 'Notes on the Folk-lore of the Northern Counties of England and the Border,' published in 1866, contained an Appendix on Household Stories by the Rev. S. Baring-Gould. It now appears, from a remark in the preface to Professor Crane's 'Italian Popular Tales' (reviewed in No. 1065 of the *Nation*), that the scheme of "Story Radicals" published in this Appendix as by Mr. Baring-Gould is in reality a translation, with alterations, of the 'Märchen- und Sagformeln' printed in the first volume of J. G. von Hahn's 'Griechische und Albanische Märchen' (Leipzig: 1864). No mention is made by Mr. Baring-Gould of his indebtedness to Von Hahn.

Rapid progress in the preparation of the definitive edition of Goethe's works is reported by the committee having the undertaking in hand. The materials for this edition are the large mass of manuscripts bequeathed by the last descendant of Goethe to the Duke of Saxe-Weimar. At an early date there will be published from this collection some poetical and epigrammatic fragments, studies upon Homer in connection with a projected edition of the 'Iliad,' and notes upon the *mise-en-scène* of "Faust" and "Egmont," among which are comments by Schüller relative to the latter piece. The publication will begin with the correspondence, of which the volume containing letters from Goethe's mother to the Duchess Anna Amalie is momentarily expected. The journal which Goethe kept with great regularity from 1798 to within a few days of his death in 1832, with the exception of the year 1805, will probably prove to be the most interesting of the inedited writings. The date of its publication is not yet announced.

The Italian custom of publishing one's monographs "per le nozze," that is, to celebrate the marriage of some friend, has spread to France. M. Émile Chatelain has written, in honor of the marriage of Professor Gaston Paris with the widow Delaroche-Vernet, *née* Talbot, a little quarto of thirty-one pages, entitled 'Manuscrits de la Bibliothèque de l'Université tirés des dépôts littéraires,' in which he sketches the history of the University Library, and tells of the MSS. received during the Revolution from some 206 confiscated libraries of émigrés.

Undismayed by the severe criticisms to which his 'Ursprung der Magyaren' (1882) has been subjected on the part of Professors Hunfalvy, Budenz, and others, Professor Vámbéry, of Buda-Pesth, has published a new comprehensive work of a kindred character, 'Das Türkenvolk in seinen ethnologischen und ethnographischen Beziehungen' (Leipzig, 1885). The word "Türkenvolk" is here used in its wide sense, as referring not only to the Turks proper, or Osmanlis, but to the whole Turkic race. The "Introduction," which embraces ninety pages, is devoted to the elucidation of the origins of the race according to its own national traditions, of its first appearance on the scene of history, its position in the Uralo-Altaic family of nations, its migrations, etc. The five main divisions of the work treat of Siberian Turks (Yakuts and minor tribes), Central-Asian Turks (Kirghiz, Özbegs, Turkomans, and others), Volga Turks (Tartars of Kazan, Tchuvashes, Bashkirs, Meshtchers, and Tepters), Pontine Turks (Tartars of Crimea, Nogais, etc.), and Western Turks (Turks of Azerbaijan, Osmanlis). The Magyars, whom the author in his previous writings represents as a more essentially Turkic than Finnic people, are here wisely left out. On the wide field which he sketches, both ethnologically, with a display of linguistic learning, and ethnographically in a popular vein, Professor Vámbéry is probably the most prominent authority, owing to studies, travels, and a diligent (but too facile) use of the pen. His previous publications on parts of the same subject include 'Cagataische Sprachstudien,' 'Uigurische Sprachmonumente,' and 'Primitive Cultur des Türkenvolkes.' One of his latest philological productions is the annotated edition, with translation, of an Özbeg epic in 76 cantos ('Scheibaniade'; Buda-Pesth, 1885).

—A subscriber writes us:

"I have taken the *Nation* ever since it was published, and I have every number but the first. I have offered a dollar for it, but it is not to be had. As there is such a demand for a limited number of copies, could you not *reprint* it?"

Unless at least 200 purchasers at one dollar each were assured, it would not pay us to reprint the first number of the *Nation*. The chances are, judging from a large amount of correspondence on this subject during the past few years, that most of those needing the first number require also others of the earlier issues, which are equally scarce.

— Our indefatigable transatlantic countryman, Mr. B. F. Stevens, will shortly address himself to Congress in behalf of an enormous labor which he has undertaken for the preservation and concentration of historical documents scattered among the archives, public and private, of England, France, Holland, and Spain. These (mostly unpublished) manuscripts relate to America, or our portion of it, during the period 1772-84, and are of inestimable value for the student of the Revolution in its military and diplomatic aspects. Mr. Stevens has, in many years, succeeded in indexing some 80,000 of them, and his plan "comprises the collection and comparison of all duplicates and variations of these documents wherever they exist, the recording of all points of difference, the cataloguing of all, and the copying of all principal and distinct documents that have not been published, and the variations from those that have." To illustrate the scheme he has printed a tentative Specimen, based on a collection (now ready for publication) of about 3,500 papers on the Paris Peace Negotiations, and about 600 contemporaneous official letters from the French Ministers to the United States to the home Government. Nothing could well be more thorough and minute. Mr. Stevens says he has a trained corps of assistants, and other special facilities which give him exceptional advantages over any one else in the prosecution of this task. He does not offer any estimate of the cost of the enterprise; nor of the time necessary to its conclusion, though he intimates that it would be short. The proposal is one worthy of the careful consideration of Congress, and ought, we think, to include the Hessian archives at Marburg, of which both the military and the social and personal revelations are certain to possess a high degree of value and interest.

— Dr. Waldstein contributes to the December *Century* an article upon the conditions of national art among us which is as suggestive as it is thoughtful. Reasoning from Greek example, he bases an expectation, that our republic is the most likely to produce great art, on the fact that all great art has been democratic; and, wishing to hasten the coming of the good time, he advocates direct teaching of art appreciation in the schools by hanging the walls with copies of the best historic work and in other ways, and also Government patronage of museums, lectures, and all forms of æsthetic amusement. He urges, too, the mature members of the community to allow what he calls "the play of the mind" a larger place in their leisure. These are his practical suggestions, and, backed by an enlightened public judgment, they are feasible enough. But it may be questioned whether, if all this were done, analogous conditions to those which obtained in Greece would be realized. Dr. Waldstein knows much better than ourselves that the popularity of Greek or Italian art arose from the fact that the artists gave back to the people an idealization that was already potentially in themselves. It was not merely by beauty, on which side we moderns approach their works, that Phidias and Giotto made their appeal; the perfectly-moulded man meant to the Greeks much more than he ever can mean to a civilization in which the basis of noble living is less physical, just as the Madonna meant more to St. Catharine than she ever can to a Yankee schoolma'am. It is by this ideality in the daily life and thought of the artistic generations that they differ from ourselves, and this lack no Madonnas in school-rooms, nor boulevard concerts with unlimited beer, nor Grant memorials can supply. Nevertheless, the appreciation of beauty is something, though it be the beauty of a past time; but when our national art comes, its beauty must be the mere sensible garment of an ideal element in the popular life of which there is no sign. Perhaps all great art, hereafter, is to be individual.

—The War Series this month includes a valuable paper by Ericsson upon the *Monitor* and her class, and a survivor's account of the loss of the original *Monitor* at sea. Ericsson's paper is worthy of a permanent place as a cyclopædic article, for it not only gives the plans and structure of the first *Monitor*, but the conditions and limitations under which it had to be built, and the improvements which were practicable in those of the class which could be constructed in a less hurried way. He also meets with terse directness some criticisms upon these vessels, and does not hesitate to point out what he regards as faults in their handling, or mischievous deviations from the leading design in their structure. The "Survivor's" narrative is a graphic picture of a marine disaster, in which the personal experience of the narrator is wisely made the thread that connects the thrilling details of the foundering of a vessel which, even in so brief a career, had become historic.

— M. Edmond Courtois has made a discovery. He has found a land unknown to the old travellers and unvisited by Cook's tourists, not described in any book, not even in a guide-book—Venice in summer. Venice as a bathing place. George Sand did get so far as to describe Venice in the spring, and to first point out the beauty of the soft green moss that then covers the lower stones of the palaces. But by the end of May, or the middle of June at latest, all the travellers are off to the Engadine or the Tyrol. Then the Venetian really enjoys his city, then many-colored shades cover all the windows, then the gondolas are all refitted. Then Queen Margaret comes for her annual visit, and with her all the

aristocracy. Chambers, houses, palaces are hired. It is a perpetual fête; every one seems to be enjoying himself, so that one wonders who does the work. Bathing goes on everywhere and all the time. For those who are not particular about the cleanness of the water they swim in, the canals are most convenient, for every house has a door opening upon one, provided with steps down which you may see at any time of the day father, mother, and *bambini* descending to sport noisily in the water and hang upon the passing gondolas. Those whose fastidiousness revolts at sewer-bathing can take the little steamers which run till midnight, and in a quarter of an hour reach the Lido, the Coney Island of Venice, where an excellent beach and separate places for men and women satisfy the demands of nature and of civilization. But bathing is not the only public pleasure. Gondolas, with a piano, or a violin, and a chorus of four or six voices floating along, add a charm to the summer evening. And from time to time there is the *grande serenata*, when everything else is given up, even bathing and the theatre, and the whole population gathers to hear and applaud the best singers to be found in Venice. A platform is built over several boats richly decorated with flowers and colored lanterns; the State gondoliers tow it, and the most famous *prime donne* are glad to take part in the concert. There are also the regattas, when the Venice of the Doges reappears for a time, the palaces are hung with flags and rich stuffs and Oriental carpets. The State gondolas come forth, beautiful with carving, gilding, painting. The gondoliers, too, with their garments of brocade and cloth of gold, are a reminiscence of the great days of the Queen of the Adriatic. These old times will be still more elaborately reproduced at the great exhibition which is to be held there. Signor Molmenti, the author of the 'Vita Privata di Venezia,' will have charge of the retrospective part of the exposition; and no doubt it will be a feast to the antiquarian and the lover of magnificent costumes and gorgeous pageants. It will be something to be present again in this nineteenth century at a marriage of a Doge with the Adriatic.

STEDMAN'S POETS OF AMERICA.

Poets of America. By Edmund Clarence Stedman, author of 'Victorian Poets.' Boston: Houghton, Mifflin & Co.

MR. STEDMAN'S work on 'American Poets' has the merit of being the first serious attempt to do, on any extended scale, the important task which he has undertaken. It has the disadvantage of having been prepared under many interruptions, and of needing, perhaps for this reason, rather more careful compression than it has received. The author has courageously undertaken to make the book not merely a criticism, but an encyclopædia of births and deaths; and this encumbers the margin and sometimes the text; while, since the advent of such excellent condensed biographers as Mr. O. F. Adams and Mr. W. M. Griswold, this part of the work might as well have been omitted. In the case of women authors, Mr. Stedman, as he tells us in his preface, foregoes this detailed information altogether, except where previously in print. This at once impairs the completeness of the whole book, and, since the author tells us very little about this particular class in any other respect, it seems hard that even these statistical items should be left out. There is also a good deal of repetition in these pages—a fact or criticism being frequently indicated in one chapter and given at length in another. But, with whatever allowance, it is certain that a manual so well considered, so honestly executed, and so admirably indexed, will command a wide circulation and a long lease of life.

No one can examine these well-filled pages without a sense of respect for the literary fidelity that prepared them. Yet the theme they treat is more important than the fame of any author or compiler, and we must therefore speak of the book freely, both as to its strong points and what seem to us its weak ones. Mr. Stedman begins with some admirable statements as to the detached and independent position of this continent, and of "the division of an ocean gulf, that makes us like the people of a new planet" (p. 13); but then goes on to announce what we are obliged to criticise as an essentially false theory of the relation between his nation and his favorite art. Instead of accepting frankly the simplest explanation of any delay of poetic production on this continent, and pointing out that the element of time was the one thing needed, he reverts to an old theory of his which attributed the blame to the continent itself, or its early occupants, for not being sufficiently poetic and not having legends at command. In the preface to his 'Victorian Poets' he said: "I might touch upon the lack of inspiring theme and historic halo, of dramatic contrast and material" (p. xiii); and now in this volume, nine years later, he does the same thing in detail, drawing an elaborate contrast, in these respects, between America and Scotland. But he wholly overlooks the fact that in Scotland, also, the element of time was long wanting. In the days of Doctor Johnson, Scotland was regarded as a most prosaic place, full of beggarly men and bare-legged women; and even the gallant insurrection of 1745, carrying the fear of the Highland clans to the very gates of London, had not relieved the nation of this character. It was not until Scott, half a century later, had turned from translating German ballads to explore the legendary material of his own land, that the picturesque Scotland of to-day began to reveal itself to men in general.

We can now see that it was really not much otherwise in America. "Where," asks Mr. Stedman, "are our forest and river deities, our Lorelei, our Venusberg, our elves and kobolds?" The simple answer is in the facts. Champlain's mysterious divinity of the St. Lawrence, the Gougou, needs only to be saturated with several generations of poetry to make it as effective to the imagination as if it had haunted the Rhine. Mrs. Hamlin, in her 'Legends of Le Détroit,' has shown that there is poetic material enough in that region alone to supply the poets of a continent. Whittier, on the Merrimack, had made a whole prose volume out of 'Supernaturalism in New England' before he had fairly begun to embalm the same themes in his verse. A recent historian has pointed out that Mrs. Josiah Quincy sailed up the Hudson in 1786 with a sloop-captain who had a legend for every mountain along the banks. Washington Irving was then a child of three; and when he grew to maturity, he merely did for the Hudson what Scott did for Tweed and Yarrow, each employing the traditions ready for his hands. The trouble with Mr. Stedman's theory is that it is a belated one: it did very well, for a time, to console our authors for their inertia by laying the whole blame upon the geography of America, but that defence is now exploded; the geography is well enough, and there is enough of traditional lore among the people. We waited for our poets, and now, as this volume shows, we have them.

When it comes to individual authors, Mr. Stedman had little trouble in deciding on those who should be treated at length. He could not well have omitted giving a chapter each to Bryant, Longfellow, Holmes, Whittier, Lowell, and Poe. The fact that all these authors were born, like Mr. Stedman himself, in New England seems to have embarrassed him a little, and the assigning of a chapter to Bayard Taylor and another to Whitman is the mode he takes to equalize matters. It is not a very satisfactory way, since even his own statement makes it appear that Taylor was simply an industrious literary workman, and by no means a man of genius. If it is a mistake to canonize a man for having been born in Boston, it is even a worse mistake to canonize him for not having been born there; indeed, it would suggest to non-Bostonians a tempting advantage, like that claimed by Humpty Dumpty in 'Alice in Wonderland,' for "unbirthday presents" over birthday presents, as being more numerous. The grounds for a separate chapter on Whitman are more appreciable, since, whatever else he may be, he stands by himself, and is at least alleged by his admirers to be a man of extraordinary genius.

When we pass beyond the few *dii majores*, it is plain that the greatest difficulty in a book like this is to secure the right proportion in assigning to less conspicuous poets their relative importance. Shall one be guided by their mere popularity, or by his own judgment of their genius? We cannot say that Mr. Stedman has adhered to either rule. One would say, on the whole, that a poet, writing of poets, should weigh the achievements of his heroes, and not merely count them; the question is not how much they have toiled, but how high they have reached. To give Bayard Taylor thirty-six pages and Helen Jackson nine lines, has the defect of being ludicrous; so might an annalist of poets in the last century have given Hayley half a volume and William Blake half a sentence. Among poets of his own sex, Mr. Stedman has sometimes similarly failed to point out genius when he sees it. Posterity does not follow reviewers' rules; it takes what "finds it," in Coleridge's phrase. Ellery Channing has undoubtedly written, like many other poets, a good deal of trash, and Mr. Stedman seems to feel that he takes a magnanimous tone in admitting that Poe did not wholly extinguish him; but it is doubtful whether any single line yet written in America has a better chance of immortality than that which closes Channing's poem, "A Poet's Hope":

"If my bark sinks, 'tis to another sea."

Yet Mr. Stedman does not speak of it here, although he could not get through his "Twilight of the Poets" in the *Century* without quoting—or slightly misquoting—it. After all, as Ruskin says, it is in the perfection and precision of the instantaneous line that the claim to immortality is made; and this is as true of poetic as of plastic art. On the other hand, mere literary industry and widespread reputation have no weight, except in a single case, with Mr. Stedman; thus the late Doctor Holland, who was undoubtedly, west of the Alleghanies, the most popular of our poets, is only twice incidentally mentioned in this book, and in neither case with any criticism by way of praise or blame. All this makes it a little difficult to ascertain the standard of selection or proportion.

Among the larger essays, that on Longfellow strikes us as being the best, and nothing could be neater than some of the single phrases employed about this poet; as where Mr. Stedman says that Longfellow, if born in France, would have begun his career as an abbé (p. 184), or where he calls the handling of the poet's early sorrows in 'Hyperion' "a precise, epicurean touch" (p. 185). Longfellow comes nearer Mr. Stedman's own attitude and habit of mind than Emerson on the one side or Whitman on the other; and in dealing with both these, the latter especially, there is something of the perfunctory, like the way in which a political orator turns aside to speak of the temperance movement or the civil-service reform; not because he cares so very much for it

himself, but because he knows that a large section of his constituents will expect it of him. Of Whitman, however, Mr. Stedman's treatment is, in some respects, courageous; and of him also capital things are said, as in pointing out that "both his verse and prose have this fault in common, that he underrates the intelligence of his readers" (p. 363). But we do not see that our critic points out what strikes us as the greatest defect of Whitman, that he, almost alone among poets, absolutely ignores, among his themes, all poetic or ideal relation between man and woman.

When we come to Mr. Stedman's dealing with the minor poets, we find him embarrassed by the encyclopædic character of his work. There is a strong temptation for a man undertaking such a task, and liable to receive an indignant letter by the next mail from every slighted bard, to deal out his praise after the housekeeper's well-known method in tea-making, putting in a spoonful for each person, and one for the pot. The general receptacle is in this case American literature itself, and most of our author's remarks on that subject we take as hopeful and well-timed. He has also many fresh and salient phrases about individual poets, as when he speaks of the "orchard notes" of Miss Larcom (p. 445). In other cases his characterizations seem to us so remote from the truth that it almost looks as if he had not read the books he mentions, or had accidentally misplaced his notes and appended his adjectives to the wrong proper names. Thus he strangely includes John Pierpont among "the gentle stars of the East," who offered "their tender or patriotic lyrics, their meditative verse, their placid monographs" (p. 37). John Pierpont, whose whole career was a battle or a march, whose very bearing in the pulpit always suggested a coat of mail under the black silk gown, whose olive branch was a war-club, and who became a chaplain in the army when seventy-six years old, at the very outbreak of the Civil War, and was bitterly disappointed because he proved unequal to the fatigues of the bivouac—it must surely have been the accidental oversight of a compiler which bracketed a man like this with Sprague and Allston. And so when Mr. Stedman speaks of the poetry of Helen Jackson as "mostly in a single key, and that grave and earnest," but lacking in "variety of mood" (p. 445), one is led to fear that he may have accidentally transferred to this most versatile and impulsive of authors a sentence which had been previously pigeon-holed for some tuneful mother in Israel; perhaps Mrs. Sigourney, or Hannah F. Gould, whose modest though faded laurels are here ignored altogether.

In general, we should say that Mr. Stedman is at his best in special criticisms and *obiter dicta*, while in all that involves broad generalization the reader is apt to feel a want of breadth and volume of thought. Apart from his tone toward women poets, which is certainly a little patronizing, he deals with his themes honestly, courteously, and, on the whole, generously; but in many of his attempts at laying down general laws there is exhibited a certain want of grasp. How hasty, for instance, is his inference from the fact that Whittier is habitually careless as to rhymes and metres. Instead of assigning for this the obvious cause of Whittier's Quaker nurture, and consequent absence of all early musical training, Mr. Stedman takes the opportunity to compare him in this respect with Mrs. Browning, and says that their similarity suggests the question "whether advocates of causes and other people of great moral zeal are not relatively deficient in artistic conscientiousness and in what may be called æsthetic rectitude" (p. 109). The answer is that these two sets of qualities, which are wholly distinct—the artistic and the reformatory—may or may not be united in any particular person. A man may be born an artist or he may be born a reformer, or he may be born to combine the two temperaments in one. To deny the possibility of the combination is to say that because a gardener happens to have a good apple orchard, he must therefore have been denied by nature the capacity to raise chrysanthemums. Once go beyond the rather forced combination of Whittier with Mrs. Browning, and the whole theory breaks down. The two most artistic of younger English poets, Swinburne and Morris, are as passionately enamored of "causes" as of art; and Milton, the preëminent type of the moral element in poetry, put enough of artistic conscientiousness into any page of 'Paradise Lost' to utterly extinguish all but the two or three leading bards of Mr. Stedman's little galaxy.

CHILDREN'S BOOKS.—III.

It would be hard to find a better person than Mr. Gilman to write the 'Story of Rome,' as the second volume of "The Story of the Nations" (Putnams): and those who enjoy and value the traditions of Roman history, and fear that they will drop out of knowledge, in face of the severer historical canons of the present day, must rejoice that he has presented them in so acceptable a form. But it is not easy to weave together a mass of fable, and half-fable, and history, so as to form a consistent whole; and while the traditions are here cleverly presented, we cannot say as much for the history which accompanies them. We are at a loss to determine what view of early Roman history Mr. Gilman adopts. It is not Livy, it is not Niebuhr, it is not Mommsen; and we are sorry to be forced to the conclusion that the boy or girl who is charmed by these admirably told tales will get from the book, as a whole, a notion of Roman history which he will some time have to unlearn. We will mention two instances, out of many, of fundamental errors. On page 28 we are told that the Luceres were Etruscans. Now, this may appear a petty and unessential detail of antiquities, and, indeed, if we had been writing this book, we should have left out the Ramnes and Luceres altogether. But this statement makes the Romans out to have been a heterogeneous mixture, while, if anything is established by late investigations, it is that the Romans were a nation of Latins, with language and institutions naturally and harmoniously developed; with probably an admixture of the nearly allied Sabines, but bearing no traces of being made up in a third part of so utterly foreign an element as the Etruscans. Again, on page 169, Tiberius Gracchus is represented as appealing to the Licinian Rogations, which "forbade any man having such large tracts [of land] in his possession." Now to the American boy, and to any person who is not familiar with the technicalities of Roman law, this would convey the meaning that no person might own large tracts of land. But the very inadequate account of the Licinian Laws on page 109 says not a word about the lands; and the description of the Agrarian Law of Spurius Cassius (p. 83) does not at all explain what was the grievance in the occupation of the public lands by the rich. It speaks of "squatters," to be sure, but it is a very violent bit of analogy to represent this *occupatio* as identical with American "squatting." Most surprising of all, a note to page 171 tells us that it was Niebuhr who first made clear the true nature of the agrarian laws, while the quotation given above certainly conveys the old view, and not Niebuhr's.

'Heroes of American Discovery,' by "N. D'Anvers" (Routledge), is an excellent book for boys. The stories of the early discoverers have been told so many times that it might have been well to omit them; but they are related very briefly, and the volume contains enough that is new and fresh to make it a genuine acquisition. The explorations of the Rocky Mountains form an important part of the work, but they only come down to Fremont's time; it would seem as if it might have been better to omit Columbus and De Soto for the sake of including Major Powell and other later explorers. The author seems a little too anxious to deprive Captain Gray of the honor of discovering the Columbia, as he assures us three or four times that this river was seen by Viscaino in 1602. But, after all, the mere sight of the mouth of "a mighty river" nearly 200 years before, cannot fairly detract from the credit of the bold navigator who actually entered a most difficult estuary, which Vancouver had just passed by without noticing. There are numerous illustrations, many of them very serviceable.

'Children's Stories in American History,' by Henrietta Christina Wright (Scribner), is a gracefully written collection of stories, beginning with "Ancient America," and ending with "The Revolution," the first and last chapters being rather too general in their nature to be called properly "stories," the rest consisting, for the most part, of agreeable narration. Several of the tales border on the realm of historical fiction—for example, the opening pages in the story of Pizarro; and, as is natural, the story of Pocahontas is told as if its mythical character had not been fully exposed. Worse than this—for this has, at any rate, a certain show of historical evidence—is the account of the Mound-builders, in chapter ii., making them out to have been the Hyksos, after their expulsion from Egypt! But the tone of the book is healthy and sympathetic, and it will be found profitable reading for children; for these uncritical statements will soon fade away in their minds.

The 'Ten Boys who Lived on the Road from Long Ago to Now,' by Jane Andrews (Boston: Lee & Shepard), and whose early lives are here sketched, are Kablu, the Aryan boy, who came down to the Plains of the Indus; Darius, the Persian boy, who knew about Zoroaster; Cleon, the Greek boy, who ran at the Olympic Games; Horatius, the Roman boy, whose ancestor "kept the bridge so well"; Wulf, the Saxon boy, who helped to make England; Gilbert, the Page, who will one day become a Knight; Roger, the English lad, who longed to sail the Spanish Main; Ezekiel Fuller, the Puritan boy; Jonathan Dawson, the Yankee boy; and Frank Wilson, the boy of 1885, who rides to and from school forty miles every day in the cars. The writer has designed, in these very interesting sketches, to trace the progress of our own race from its Aryan source to its present type; and her purpose has been, by describing some of those manly virtues which arise from conflicts with poverty and privation, to awaken an interest in the lives and deeds of our ancestors that shall stimulate the young reader to a study of the peoples from whom he has descended, and to whom he owes a debt of gratitude for the inheritance they have handed down to him. Although this book describes children, and is so written as to be attractive as well as instructive to children, the account of their surroundings at the different periods indicated has been so faithfully studied out, and is so clearly described, that few grown persons will fail to enjoy it and to learn something from it. The author's style makes the book well suited for reading classes.

'In the Land of the Moose, the Bear, and the Beaver,' by Achilles Daunt (T. Nelson & Sons), is an excellent book of hunting stories, written for boys, but, like all boys' books of the present day, well adapted for reading by their elders. Three trappers spend the summer on the shores of Lake Athabasca, and the Athabasca, Peace, and Slave Rivers. Their adventures are without number, and as they kill various animals in succession,

one of the trappers takes out his note-book and reads copious notes concerning the habits and appearance of the animal just slaughtered, so that the book is a sort of treatise on natural history in disguise. The variety of animals which they encounter is somewhat startling, and justifies the statement—which is probably correct—that the shores of the Athabasca are now the best hunting-ground on the Western Continent. Buffalo, both of the prairie and the woods, moose, elk, deer, bear, musk-ox, beaver, wolf, wolverine, osprey, duck, goose, swan—this by no means exhausts the list of what fell in their way during a single season. To heighten the interest still further, there were encounters with Indians, and a love romance between one of the trappers and the daughter of a Hudson Bay employee. Probably the best parts of the book are the bear stories by old "Jake," the oldest trapper of the party, who has hunted and trapped on the plains and in the mountains from the Rio Grande to Mackenzie's River these forty years. As each fresh bear is killed by the party, the old hunter is moved to tell of some of his former experiences; and his stories grow more and more wonderful as the book progresses—as if the reader's credulity were being gradually educated. They finally culminate in the story of his feigning death when caught without his rifle by a grizzly bear, who hauled him away and buried him! This is appropriately reserved for one of the last chapters. We do not wish to throw any doubt on the accuracy of these tales, but only to call attention to their artistic arrangement. Altogether it is a capital holiday book for both boys and men.

'The Autocrat of the Nursery,' by L. T. Meade (A. C. Armstrong & Son), is an attractive-looking book, freely and fairly well illustrated, with a cover made gay by a wreath of buttercups and (disproportioned) daisies. The story is a pretty one of some little children in a lovely English home. These children, however, seem older than they are represented to be, and, considering the various persons who have them more or less in charge, they pass through remarkable and unlikely experiences. The baby-dialect of one of them, as usual when such is attempted in full, is inconsistent with itself, and will be understood with difficulty by some of the young eyes for whom the book is intended. We should like to see occasionally a story written for children which should be in every respect adapted to them, and not frequently suggestive of the author's aiming to amuse much older heads.

Mr. Linley Sambourne has already entered the field of juvenile illustration this season in Lord Brabourne's 'Friends and Foes,' but he has had greater scope, and has quite outdone himself, in his illustrations to Kingsley's 'Water Babies' (Macmillan). This whimsical allegory will never, it is safe to predict, inspire a designer more in sympathy with it, or who can treat its subaqueous fantasies with greater mastery of animal forms or a more subtle ingenuity. If Mr. Sambourne's humor is of rare quality, hardly less so is his decorative sense, and we might point to many examples, in these pages, of beautiful drawing with a firm and conscious stroke.

Life and Reminiscences of Gustave Doré. Compiled from material supplied by Doré's relations and friends, and from personal recollections, etc., etc. By Blanche Roosevelt. Cassell & Co. 1885.

PROBABLY there was never another artist who was made the subject of so much misplaced enthusiasm as Gustave Doré, but there have been many cases of unwise enthusiasm less phrenetic and less absurd than this rather ponderous volume. It responds very fairly to a widespread and ignorant admiration which, it may safely be said, no well-educated taste ever shared. Doré was essentially a popular artist, and, of course, second-rate even in his best points. He was a youthful prodigy, and, like the great majority of those extraordinary precocities, he gave out early and fell into the most inane and pointless of mediocrities. Never was the adage "Self-taught, ill-taught" better exemplified. He was gifted by nature with remarkable facility of design, and some of his child work is as surprising as child work can well be; but he never endured education, his style never rose above a facile mannerism, his color was always crude and unsympathetic, and his imagination, rather to be treated as fantasy, never successful except with the morbid and grotesque, and never happy except when dealing more or less in caricature. His high-water-mark was the series of illustrations of the 'Contes Drolatiques,' and the descent from these to the illustrations of Dante, the 'Idylls of the King,' etc., etc., was a fall not of mere failure, but of positive decay. The huge and dreary Dante pictures, *et id omne genus*, of which one saw examples in the Salon from time to time before the English public discovered Doré, were not things which inspired the critic with an idea that a great painter had come among us. In fact, as a painter, he was a sad failure, and in all probability he will be only known to posterity as the designer of the illustrations to the 'Contes Drolatiques' and 'Rabelais.' And of these, by far the best were those which were remarkable for minuteness. When he attempted the grand style, he fell into a dulness and pointlessness almost without parallel in contemporary art, and his sentimental designs range from the namby-pamby to the maudlin, with occasional lapses into the ridiculous.

If Doré may be judged by this biography, he had an estimate of himself which ought to have been a compensation for the generally low estimate put on his work by the world of art, and his pecuniary success should have compensated him for his artistic failure—for such was his career. He seems to have been a weak, conceited, and essentially commonplace character, vainglorious, and with a very low standard of artistic excellence, esteeming himself the greatest of artists, and his ambitious failures to be his own best work. His biographer tells a story of his dealings with his public which, intended to show his reverence for his mother, really shows a weak and uncertain judgment and business incapacity, and puts his mother in the position of his evil counsellor. He had painted a series of huge pictures, twelve in number, called "Paris As It Is," of which one of his friends says: "Of the twelve pictures, each one was more horrible than the other—all were positively sickening in their realism." For these "loathsome productions" he was offered by two Americans 110,000 francs, at which he was overjoyed, and "fancied that all America would rush to see his new work, of which he had already made an idol and set upon an altar of his own imagining. . . . He spoke of how he was going to put to rout the whole world, and, as far as he himself was concerned, I knew the idea of money never entered into his mind" (this is quoted from M. Lacroix). The mother vetoed the sale, saying, "They have offered you a hundred and ten thousand francs? Then you should not accept the offer, for it means that they will pay more. Ask them one hundred and forty thousand. It is quite clear that people who can pay a hundred and ten thousand francs can always pay a hundred and forty thousand." Gustave accepted the mandate, the Americans refused to raise their offer, the old lady was obstinate; they went back to America, and the pictures were never sold. His mother fanned the flame of a consuming vanity, morbid, envious, and degrading.

"He conceived an early dislike for all artists, sculptors, draughtsmen, and people of that class. As to painters, Meissonier and Gérôme positively stuck in his throat. When he heard of the fabulous prices paid to those artists he wanted to tear his hair in rage. . . . He nearly had a convulsion one day on hearing that Meissonier had received two hundred thousand francs for a single picture.

"'What,' he exclaimed, 'a thing like that! Now look at me. I can paint; I know I could paint better than Meissonier, at any rate. Have I ever been paid two hundred thousand francs for anything? No, and I never shall be. The fact is, that no one understands me. I shall live and die misunderstood, or never comprehended at all, which is worse'" (*sic*).

This is the burthen of what the author has to say of Doré, personally, divided between a flaming enthusiasm for his own morbid art and gnawing envy of the success of other artists—too weak an intellect to direct the former into healthy and profitable channels, and too conceited to learn the excellence of any work but his own. The only really great quality he possessed was his enormous facility of invention—he was a prodigious mediocrity.

As literature, it would hardly be fair to criticise closely this 'Life of Doré'; the extravagant and unqualified eulogium has no value as criticism, and is even too devoid of light and shade to be sound appreciation; the outburst of fantastic emulation, in words, of Doré's most florid conception in white and black is a curiosity of literature. The author has been paying a visit to Doré's house, and is left to herself to meditate, and gives utterance to a rhapsody too long and too absurd even for a worshipper to quote. A single passage will suffice. The author had imagined the work-room filled by his creations—

"peopled with that host of the elect who have thronged its precincts at the bidding of his pencil. You have but to think an instant, and you can see them as I did. There they were on a long table, sitting, standing, or lying on their white couches—some with draped limbs and others unclothed save by virginal chastity; some with outstretched arms and others tranquil in the calm of a perfect repose; some laughing, some weeping; and, as I approached one maiden whose face was veiled, she pointed to the heavily-laden work-table. I followed the direction indicated by her finger, and lo! before me lay all the master's implements, just as he had left them, helpless and waiting for the hand that should restore their cunning. The steel was tarnished, the crayons were scattered and broken, lying purposeless here and there in piteous and mute appeal. It was very sad. . . . How can I tell the names of all these people, each one of whom appealed to me for one look, one word, to assure them that they were not forgotten? I felt for them deeply; had I only been an inspired messenger! It was presumption even to think of such a thing; and yet I did venture to murmur, quite under my breath, 'Be patient! he summoned you from the spirit land, and will surely call you back again to join him.' That was all the comfort I could give, and I believe it helped them."

And so on for eight mortal pages of words which are neither good writing nor common sense. It is veritable fustian—"words, words, words"—such stuff as school-girls write, and, when they grow wise, burn.

The copious illustrations from Doré's drawings are the critic's sufficient warrant for denying the artist any place among the great individualities of art, or the author any discrimination as to Doré's best vein. The mass of them are poor rubbish—caricatures without humor and grotesques without point. Such designs as those at pages 31, 61, 119, 129, 139, 182, 246, 281, and 305, are simply offensive monstrosities, showing neither humor, imagination, nor clever drawing. His head of Christ, page 345, passes in inanity anything we remember of the theme, and in general the selections convey the idea that the book is a huge advertisement of Doré's unsold works. Not one block is of his best work, and many are be-

neath contempt. They will remind the reader that there is a Doré gallery in London which they can see for a shilling (though, as Ruskin said of it, "they had better see the devil"); but what other use the book can have in art culture is a mystery.

Ancient Rome in 1885. By J. Henry Middleton. "Possis nihil urbe Roma visere majus." Edinburgh: Adam & Charles Black; New York: Scribner & Welford. Pp. xxvi, 512. 8vo.

UNTIL within a half-score of years past, the city of Rome lay under its lovely sky, almost unchanged from generation to generation. Those who saw it in 1870 beheld the same strange phantasm of a dead capital, adjoining the same sombre modern town which Goethe saw in 1786. The modern town lay along the Tiber, stretching north and west from what had been the nucleus of the ancient city. If we neglect the regions across the Tiber, not very important in ancient times, we find that the modern town, as compared with the ancient one, occupied the whole Campus Martius up to the foot of the Pincian Hill, the whole Velabrum and the whole Suburra; but of the seven hills themselves, only the Capitoline, that is, the smallest of all, together with the western slopes of the Quirinal and Viminal. In other words, about a third of the space within the walls, which latter were still in the main the same walls which Aurelian had built and Honorius had strengthened, was actually built upon with thickly set houses and paved streets. All the rest of the great space, stretching away a mile and a half southwest to the Monte Testaccio, as far southeast, and beyond the Lateran to Santa Croce, and a mile east to the Prætorian Camp—all this was what travellers of twenty years ago remember so well: gardens and fields, long unpaved streets shut in between high whitewashed or gray and decaying walls of masonry. Here was a mass of ruins, there a seemingly ruinous church, where still service was held on certain days; the palace and church of the Lateran formed an outlying island of comparative completeness and repair, and the Liberian basilica stood like a promontory, projecting into the waste sea beyond. Moreover, what the ancient city had been was known only in the most general way. Let any reader open once more the classical atlas with which he was brought up, and look at the plate lettered as "Roma Antiqua." What he will see is purely fantastic. The baths of Caracalla and the Pantheon are correctly laid down, and it is true that the modern Castle of St. Angelo is the Moles Hadriani; likewise the walls are in their proper place, and the Tiber. But nearly all the rest is—let us not say imaginary, but *fanciful*, the work of men who thought that it was necessary to put down the famous buildings of antiquity somewhere, and who set, accordingly, the Curia and the Græcostasis and Nero's Golden House wherever seemed to be a good place for a group of broken lines and a figure "9" or "13." The grand culmination of the no-knowledge of the archæological map-makers is to be found in Canina's big folio, the 'Pianta Topografica,' where a neatly engraved plan of the ancient city gives all its important buildings on a large scale and conveniently grouped together, but all wrong, without even an approximation to accuracy, except where some giant ruin rises in the sunshine, impossible to ignore.

But during the past few years excavations have been made with some thoroughness by the authorities, and the Forum and the Palatine Hill are beginning to be known. Moreover, the modern city is growing rapidly over the Quirinal, Viminal, and Esquiline Hills, following a general plan which the municipality has laid down; and in this extending of the building operations of the city, in digging countless cellars and sewers, immense numbers of antique buildings have been discovered and examined, although to be immediately shattered to pieces for the material, dug into for foundations, and covered up with permanent structures. Pitiful it is to see the destruction that is going on, and despised will be this generation of Romans by their posterity; but meantime we are learning something from these ruinous explorations, and ancient Rome is taking shape before our eyes.

It is all this newly-created archæology of Rome that Mr. Middleton's book undertakes to explain. After a preliminary chapter, in which are described the systems of building and ornamentation used by the Roman architects under the Empire, as found in their remaining buildings, the author takes up these buildings one after another, and analyzes their construction and disposition. Small illustrations in the text answer all purposes of clear demonstration. There are also a general plan of modern Rome, a rectified small-scale plan of the ancient city, a good diagram of the buildings on the Palatine, and a very careful and thorough survey, made by the author himself less than a year ago, of the northwestern and more important part of the Forum. The new discoveries, and the discussion of their significance by the most competent students of architectural antiquities, are described and explained with sufficient fulness. Moreover, the longer known edifices are taken up and studied with as much care as if now examined for the first time; nor does the account of the Colosseum yield in interest and value to the chapter devoted to that brand-new subject, the Atrium Vestæ. Throughout the whole book the author's aim has been the utmost clearness of exposition; no language can be simpler, no style more quiet and reserved. Especially to be praised is the unhesitating fashion in which the author has repeated himself whenever he has thought it necessary for perfect clearness; he has not allowed the hasty reader, perhaps *on the spot*, and using the book as a guide-book, to lose anything for want of patience to look up a cross-reference. The point is made again, the explanation repeated, though perhaps in briefer words than at first, and with reference to the fuller description. In fact, we have here a model handbook, at once interesting enough to read and read through in New York, and thorough enough to supply all needs even of a tolerably enthusiastic student in Rome.

In general, nothing is to be objected to the easy way in which mooted points are alluded to, the true answer to every question given, with but little hint of there having ever been any other solution offered. In general, that is all right. Our author brings to the solution of these questions much practical knowledge (he is apparently an architect) and varied reading; he knows the last word of each and every discussion. It is only now and then that one wonders at his coolness. Shall we instance page 338?

"The construction of the enormous cupola [of the Pantheon] is a remarkable instance of the extraordinarily skilful use of concrete by the Romans; it is cast in one solid mass, and is as free from lateral thrust as if it were cut out of one block of stone. Though having the arch form, it is in no way constructed on the principle of the arch."

Is that certainly so? Nothing is known of the interior construction of that immensely thick and unflawed shell. Piranesi had a chance, about 1750, to examine the inner face of the cupola, before it was stuccoed, and many late writers have used his drawings in their examination of the question—Viollet-Le-Duc, Isabelle, and notably Choisy in his important work, 'L'Art de batir chez les Romains.' It is not certain that the discharging arches seen on the outer surface, and, by Piranesi, on the inner surface, are really of importance in the construction; but is the contrary certain? And indeed is not the statement too sweeping (pages 32-33 and elsewhere), that *all* the brick arches seen in the brick facings of heavy walls everywhere among the ancient structures, and which seem to be discharging arches most carefully arranged and distributed, are shams? The author seems to us to assume that they must be so, because the brick facings are only a thin outer shell of massive concrete walls and piers; but the contrary theory is that brick was used—with care and economy, indeed, but still always used—for constructional arches of all sorts, both as discharging arches built into walls, and as vaulting ribs and permanent centring (so to speak) in masonry roofs. In fact, we are always quoting the Roman use of brick skeletons clothed and filled with concrete, historically and didactically, as a very important system of building. And it is very desirable that a complete exposition should be furnished of our author's reasons for denying all this.

There is an index, but it is not very complete. None but the primary subjects are included in it. An important name may be given a half dozen times in the text, and yet not appear in the index; and an important subject will be found in the index with only one reference, while allusions to it in the text are frequent. This is the less annoying in view of the numerous cross-references in the notes at the foot of pages, but it is a defect.

American Constitutions: The Relations of the Three Departments as Adjusted by a Century. By Horace Davis, of San Francisco, Cal. [Nos. IX.-X. of the Third Series of the Johns Hopkins University Studies in Historical and Political Science.] Baltimore.

IF the Johns Hopkins University had no other reason of existence, its publications in this department would entitle it to national honor, while its actual achievements are only a foretaste of future possibilities. The men who are most competent to investigate our political history are not always willing or able to incur the cost of publications for which there is but a limited demand. An institution which stands ready to stimulate research by publishing anything of merit, while exercising a sound discretion as to the quality of the work, is of inestimable value, particularly at a time when practical politics needs to be chastened and corrected by the application of theory. The writer of this pamphlet, the son of a former Governor of Massachusetts, a graduate of Harvard in 1849, and a member of Congress from his Western home, is well fitted for his work, which, though only a sketch of seventy pages, gives an interesting retrospect of the workings of the numerous written constitutions of which this country has been the inventor and the prolific parent.

The keynote throughout is the existence and the danger of the preponderance of the legislative branch of the Government as against the executive. In the dread of executive power which followed the War of Independence, almost the whole power in the State governments was vested in the legislative bodies—an evil which Mr. Davis thinks has been largely corrected, though herein he seems to us decidedly too optimistic. Thanks to the evils of the old Confederation—and it is a benefit which offsets all the sins of that wretched makeshift—we escaped the disaster of a plural executive, or one elected by Congress, and of a privy council to hamper his power and divide his responsibility. A single President, elected by the nation, and with a

power of appointment to all offices in an administration conducted throughout by single individuals—this it is which makes the Federal Government so much superior to that of any of the States. And yet Mr. Davis shows that Congress has been steadily encroaching upon the power of the Executive. Of the three great battles, that with Jackson in 1834 and that with Johnson in 1867 resulted in an almost complete victory for the legislative branch, while Hayes's triumph in 1879, in the matter of riders to appropriation bills, was but a slight check to the tide of usurpation. The civil-service conflict is as yet far from being fought out.

The State governments, though less conspicuous than that of the nation, are much nearer to the life of the people, and are constructed upon a much less stable basis. They present a fruitful field of investigation for the political student. Mr. Davis says:

"Thus we see that in the State constitutions there has been a steady drift of popular opinion toward limiting the powers of the Legislature, and, as a rule, increasing those of the Executive. . . . The Legislature has been shorn of its unjust supremacy, and confined to its rightful limits; the power of the Executive has been restored to a proper degree, making the balance of power in the State constitutions far more perfect to-day than ever before."

In this statement we think he goes much beyond the facts. Legislative action has, indeed, been to some extent limited by constitutional restrictions, but the strengthening of the Executive has in practice been very slight indeed. The points on which Mr. Davis relies are as follows:

"To-day the Governor is everywhere chosen by the people directly instead of through the Legislature: his term has generally been lengthened to two or three and four years. At the same time the old restrictions on consecutive terms and reëlections have been generally abrogated, being retained in only eight States to-day. The veto power has been restored, and at present, in thirty-four States the Governor has the usual qualified veto on legislation. In nine of these, however, this may be overruled by a bare majority of each house in the Legislature, while four States have absolutely no veto. The Privy Council has been abolished by all but three States, and in these it is no longer chosen by the Legislature but by the people, and its control over the Governor has been much curtailed. The appointing of officers has been generally taken from the Legislature. Most of the officers are chosen by the people; where this is not the case they are usually appointed by the Governor, and confirmed by the council of the upper house of the Legislature. The pardoning power is now everywhere vested in the Governor, or the Governor acting with the advice of either the Council or the courts—except in Connecticut. In most of the States the Legislature is forbidden to increase or decrease the salary of the Governor during the period for which he was elected."

This is his whole case. But except as to the election of subordinate executive officers by the people—an arrangement which could easily be shown to be quite as fatal to executive power as election by the Legislature—every one of these conditions exists in the case of the Federal Government, and Mr. Davis himself shows that Congress has been constantly encroaching on the power of the President. An examination of the working of the State governments would, we think, show clearly that the Executive is almost completely powerless for any good purpose, the veto power being quite inadequate for the promotion of any positive policy, and a very imperfect check upon anarchy or corruption in the legislative branch. What is needed before there can be any due proportion of power and responsibility between the two branches is, first, that the Executive shall have an opportunity equally with the Legislature of direct appeal to its constituents, the people, in public debate; and secondly, and as a consequence of this, that it should have a voice in the shaping of legislation, with the right of submitting, discussing, and defending plans of administration, of criticising legislative action, and of being criticised in its turn.

Mr. Davis indulges in a pæan over the excellence of our judiciary and courts, and with much justice, as there is perhaps no institution in the civilized world which commands more general respect and admiration than our Supreme Court. But while he is free in his criticism of the past, he is throughout quite chary of finding fault with our institutions as they exist, and accordingly glides very gently over the subject of an elective judiciary, which we hold to be open to condemnation, both in theory and practice, and which, for what success it has had, is probably less indebted to its own merits than to the habits of submission and respect to law among our people which Mr. Davis extols so highly. In fact, however, the judiciary is really a branch of administration, and its permanent purity and success depend largely upon a due adjustment of the relations between Executive and Legislature, which is the vital problem before us for solution in the future.

Windsor: a Description of the Castle, Park, Town and Neighborhood. By W. J. Loftie, B.A., F.S.A., author of a History of London, etc. London: Seeley & Co.; New York: Macmillan. Large 4to, pp. 91, besides 12 separately printed etchings.

THIS book is made up from the *Portfolio*, with pages of the original size, and all the original full-page etchings, and all the illustrations of the text. History, with slight descriptions, of the castle, park, and town at different epochs in the past, is mingled with laudation of the architecture and scenery as they are in the present. It is not easy to use the book in any way, because all sorts of information are mingled together, and flavored with enthusiasm and loyal utterances in undue proportion; and yet the mixture is entertaining if not very instructive. But here is the vexation of it: Windsor Castle is very jealously guarded against curiosity, and even against studious research. Nowhere on the Continent is the student's path made as thorny as in England, and the royal residence is the most impenetrable thicket of all. The excluded public asks, then, from the privileged author of such a book as this a little more exactness, a little more precision in his statements. One is reminded, by Mr. Loftie's prose, of the Norman and Gothic remains in forgotten courts and foundation walls, and also of the priceless Sèvres porcelain and unmatched Vandykes of the private apartments. Of these the first are inaccessible, the others to be seen only by the half glance that is allowed the personally-conducted victim, who is hurried along a narrow route marked out for him, and cannot even walk about a saloon and choose his point of view. Probably nowhere in Europe is so much artistic wealth so selfishly and narrow-mindedly locked up, useless to all the world. And to have a big book about Windsor like this one, which leaves us just as wise as we were before about all these griffin-guarded treasures, is annoying. At the same time it is probably not altogether the author's fault; what would have been thought of him "in high places" if he had really described and really analyzed and criticised?

The illustrations do not fall off from the standard of merit which the *Portfolio* maintains, and some of those by Mr. Railton are much above it, and are of real excellence as drawings of architecture.

Palermo: A Christmas Story. By Alice Durand Field, author of 'Christmas at Grey Castle.' G. P. Putnam's Sons. 1885. 4to, 212 pp.

THIS is a very short story, illustrated by five etchings about 3 by 5 inches; but it is made up into a handsome gift-book by the simple expedient of thick paper and very broad margins. As a piece of printing it is admirable. The story itself is a trifle—a sketch of life in Palermo in the spring of 1860. Patriotism, poetry, and religion are the chief interests of the characters, who repeat or sing to one another long passages of verse without giving credit to the authors thereof, so that, together with a long piece of Keats's and one from Matthew Arnold, are verses that may be the authoress's own, for aught we know. The book is "sentimental" far beyond what we are accustomed to in these later days. The etchings signed S. C. or C. S. (in a cypher) are probably by Mr. Samuel Colman, whose enforced absence from his home in search of health we have even now to regret. They are pleasant in tone, but are very slight and careless, and of no value as renderings of the scenery and buildings whose names they bear.

Isis and Thamesis: Hours on the River from Oxford to Henley. By Alfred J. Church, M.A. (Lincoln College, Oxford). London: Seeley & Co.; New York: Macmillan. 4to, pp. 65, besides 12 separately printed etchings.

THIS is one more book made up from the *Portfolio* (but with a smaller page), and it is well worthy of existing in an independent form. It is a very entertaining account of the Thames and Isis, especially at Oxford, with a separate chapter about the boat-racing water at Henley, near London. Boat-racing as practised at Oxford and at Henley is described so that all can understand what seem to strangers its strange details. Fishing and punting and *sailing* in sail-boats (which we outsiders certainly do not associate with English rivers), are all dealt with as they are and as they were forty years ago. The text is illustrated with a host of pretty little landscapes, drawn with a sharp point and a delicate touch, in a manner the reverse of the effect style of modern etchings—that is to say, almost purely in outline, with shade used for local color only, or for fuller explanation. The full-page etchings are also of this character to a great extent; the author has never forgotten exact delineation, although he brings atmospheric effects athwart his simply drawn landscape now and then. These designs, which seem to be by Mr. Church himself, one and all, should not be ranked too high in the scale: they are of a limited range, and, taken one by one, are not extraordinary works of art; but the series of them taken together is of wonderful interest, and they are half or more than half of this very agreeable book.

One word of commendation for the title-page, which has all its lettering engraved in a simple, legible, antique-looking script, and which has a pretty vignette. The engraved titles of sixteenth-century and seventeenth-century books are delightful things, though not so very common. What more inexpensive and more suitable decoration can a book have than this?

Prytaneum Bostoniense. Notes on the history of the Old State House, formerly known as the Town House in Boston, etc. By George H. Moore, LL.D. Boston. 1885. Pp. 31.

MANY of our readers are aware that the city of Boston a few years ago resumed possession of the building known as the Old State House, and, after restoring it to its former condition, placed its halls in the charge of the Bostonian Society. The address above cited was delivered in May before that society, and it is a valuable contribution to the history of the building. Dr. Moore has filled up some gaps which had been left in the official history, and, without discovering anything of

great importance, he has done good work in adding much to the details of the record. In particular he calls attention to the fact, already known, that the Supreme Court of the Province occupied the west end of the hall, now known as Representatives' Hall, and that the lower branch of the Legislature was thereby much confined in its accommodations. The real point left unsettled is as to the exact date when that hall assumed its present form, whether between 1775 and 1800, or in 1820.

Dr. Moore's greatest novelty is perhaps his full description of the persistent attempts to remove the Legislature from Boston to some other town —efforts begun in 1739 and continued until 1755. It is to the credit of Thomas Hutchinson that he influenced the decision to rebuild the House in Boston when it was so injured by fire in 1747, for the vote of the representatives was often for removal. In fact, in 1751 an act was passed and signed to build the Province House in Cambridge, and to term it Warren Hall; but as it was to be built with the money of Admiral Sir Peter Warren, which he preferred should go to the education of Mohawk children, that fine project failed. Dr. Moore also enlarges upon the fact that a gallery for the public accommodation was one of the startling innovations introduced by Otis and Adams.

It will perhaps bear repetition, the fact that the Old State-House in Boston is the most nearly genuine relic of the Revolution now left. Independence Hall was almost a wreck before it was rescued; Faneuil Hall was entirely reconstructed in 1807; but the walls, floors, and window-spaces of the Old State-House are unaltered. The visitor to these halls finds nothing new in the essentials, and may safely indulge in visions of the past, clothing them with the forms before his waking eyes.

THE MANHATTAN
Life Insurance Company.
156 and 158 BROADWAY,
NEW YORK.

"*I MUST DIE TO WIN.*"

This is a common expression, one used perhaps most frequently as an objection to the ordinary life plan. "It is an excellent form of provision for the family, but I must die to win."

YOU MAY LIVE AND WIN.

This refers to the Endowment plan, which meets the above objection. Take, for instance, a policy payable to yourself 10, 15, or 20 years hence. Say you die before the termination of the period: *your family wins.* You survive the period: the policy becomes at once a provision for your own advancing years. *You have lived and won.*

The "MANHATTAN'S" New Plan meets the case.

For example of its operation address the Company, giving your age.

MYTHOLOGY

In Art and Literature.

There will be found certain stories in the language of man, which, in various forms, are common among all nations, from the most ignorant to the most intelligent. *These are the stories of mythology;* they have come down to us from antiquity in both art and literature, from a period so remote that their origin is lost, but they have in all times and among all nations furnished subjects for what is best in literature and art.

We see a painting, or a sculptured form in marble; to us it may represent an unknown subject. We see nothing to admire in it, perhaps, except in execution, while to those who are familiar with mythology it tells a story or illustrates an act. It must not be inferred that these stories, which have survived and been in common use for thousands of years, are presented as a study, but rather as a recreation. They might be called

Fairy Stories for Grown-Up Folks.

Those who read them for the first time will be surprised to find how much they explain, of which they previously had but a vague idea, not only in art and literature, but in all manner of subjects of every-day life and occupation.

These stories have been gathered in a most attractive and convenient form by Mr. Bulfinch, and lately revised and enlarged by

EDWARD EVERETT HALE,

under the title of

The Age of Fable;

OR,

Beauties of Mythology,

containing over one hundred illustrations from Ancient Paintings and Statuary, the originals of which will only be found in the

Art Collections of the Old World.

PRICE, $2.50.

Published by S. W. TILTON & CO., Boston, and may be had at their office, 333 WASHINGTON STREET, or will be sent by mail, postpaid, on receipt of price.

NEW BOOKS.

FRANCIS I.—HENRY II.

The Court of France in the Sixteenth Century.

1514-1559.

By Catharine Charlotte, Lady Jackson.

Author of 'Old Paris,' etc.

In 2 vols, large crown 8vo, with Portraits. $9 00.

The Liberal Movement in English Literature.

A Series of Essays. By W. J. Courthope, M.A., Editor of 'Pope's Works.'

Post 8vo, cloth, $2 40.

This work contains a view in outline of the course of English imaginative literature since the Restoration, showing how the classical standard of tests accepted during the eighteenth century was gradually constituted; how the element of Romance was by degrees revived in poetry and prose; in what respect Wordsworth, Scott, Byron, Shelley, Coleridge and Keats, developed or departed from the tradition of the eighteenth century; lastly the stage at which the Liberal or Romantic movement has now arrived, and the prospects it discloses.

Symbols and Emblems of Ancient and Mediæval Christian Art.

By Louisa Twining.

With 500 Illustrations from Paintings, Miniatures, Sculptures, &c. Crown 8vo, Cloth, $4 80.

Miss Twining by entering most fully into every detail of the Symbols and Emblems of Christian Art, has supplied the student or traveler with a guide which gives him all the information he requires in Rome and elsewhere, and by increasing the interest in the subject he is studying, puts life and meaning into what was before a meaningless wall covered with hieroglyphics.

THE CONCLUDING VOLUMES OF

The Memoirs of Karoline Bauer.

Vols III. and IV., demy 8vo, cloth, $12 80.

"Even more interesting volumes than those which preceded them."—*Era.*

"Abound in interest for all who care for bright gossip about Royal and other eminent persons."—*Graphic.*

ILLUSTRATED BY STURGESS,

THE COACHING AGE. By Stanley Harris, author of 'Old Coaching Days,' etc. In 1 vol., demy 8vo, with 16 spirited full-page illustrations on stone by John Sturgess. Cloth, $7 20.

Charles Scribner's Sons

WILL PUBLISH DECEMBER 12:

Valentino.

BY WILLIAM WALDORF ASTOR.

1 VOL., 12MO, HANDSOMELY BOUND, $2.00.

"The style of the book is unaffected and musical. The descriptions are vivid, and the dialogue is interesting and imbued with the spirit of the times which the writer is describing."—*N. Y. Tribune.*

'Valentino' is a romance founded on the history of the Borgia Family in the early part of the Sixteenth Century, during the lifetime of Pope Alexander VI., and of his son, Cesare Borgia. It presents a remarkably clear and carefully studied picture of the manners and customs of those eventful times embodied in a story full of spirit and action.

*COLONIAL NEW YORK. PHI-*lip Schuyler and his Family. By Hon. George W. Schuyler. Two vols. 8vo, vellum cloth, gilt top, uncut edges, $10.00.

Only five hundred copies printed.

Mr. Schuyler began this work, as he explains in his preface, by the study of the genealogy of his own family; but, as he went on, he found himself led irresistibly into a wider field than that of mere family annals, and he ended by the very important contribution to Colonial New York history which these volumes now contain.

Good Books for Christmas.

TIRYNS: THE PREHISTORIC

Palace of the Kings of Tiryns. The Results of the Latest Excavations. By Dr, Henry Schliemann, author of "Mycenæ," "Ilios," etc. The preface by Prof. F. Adler, and contributions by Dr. William Dörpfeld. With 188 wood-cuts, 24 plates in chromo-lithography, 1 map, and 4 plans. 1 vol., royal octavo, superbly bound, $10.00.

"The best, most interesting, and most important of Dr. Schliemann's works."—*Hon. Eugene Schuyler.*

TWO YEARS IN THE JUNGLE.

The Experiences of a Hunter and Naturalist in India, Ceylon, the Malay Peninsula, and Borneo. By William T. Hornaday. 1 vol., 8vo, with maps and illustrations, $4.

"Since the visit of Mr. A. R. Wallace to the Malay Archipelago no such important addition has been made to the data of natural history as is embodied in this record of exact and ample observation in a seldom penetrated field."—*New York Sun.*

THE NEW ILLUSTRATED

RUDDER GRANGE. By Frank R. Stockton. Newly illustrated by A B. Frost. One vol. 12mo, $2.

This edition of Mr. Stockton's famous book, prepared for the holidays, contains nearly 100 new illustrations by Mr. A. B. Frost, who admirably supplements the author's quaint humor by pictures which are in themselves intensely funny. No more attractive book can be found by holiday buyers.

BRIC-A-BRAC STORIES. By Mrs. Burton Harrison. Illustrated by Walter Crane. 1 vol. 12mo, $2.

"Few volumes will receive a warmer welcome from children. . . . It is praise enough for Mr. Crane's illustrations to say that they harmonize with the stories. We confess to have been beguiled by the book into a forgetfulness of time, cares, and pretty much everything for two consecutive hours."—*Christian Intelligencer.*

*STORIES BY AMERICAN AU-*thors. "Cabinet Edition," 10 vols. beautifully bound, gilt top. In a box, $7.50.

This fine edition has been made necessary by the repeatedly expressed demand for this standard collection of American short stories in a form suitable for preservation on the library shelf or for gifts.

Messrs. Scribner have always ready for inspection in their retail department the richest and most complete stock of books issued by all English and American publishers in every branch of literature.

*** These books for sale by all booksellers, or sent, post-paid, on receipt of price, by*

A SUPERB VOLUME.

ETCHING.

An outline of its technical processes and its history, with some remarks on collections and collecting. By S. R. Koehler. Illustrated by thirty plates by old and modern etchers, and numerous reproductions in the text. 1 vol., large quarto, gilt top. Extra cloth, price, $20; half morocco, gilt, $30; full morocco, gilt, $40.

This volume is of special interest, as it is the first connected history of etching ever written. It is very fully illustrated, containing no less than one hundred and twenty-five specimens, thirty of which are etched plates by old and modern masters. The ninety-five examples in the text consist of phototypic reproductions of old etchings, illustrating the whole history of the art, from the beginning of the sixteenth century down to our own day, in Germany, the Netherlands, Italy, France, Spain, England, and America.

THE WILD FLOWERS OF COLORADO.

From twenty-four original water-color sketches, drawn from Nature (with appropriate text). By Emma Homan Thayer. The Plates chromo-lithographed in the highest style of the art by Donaldson Bros. Bound in extra silk-finished cloth, full gilt, bevelled boards, and various colored inks. New style. Price, $7.50.

"This magnificent work is in many respects the finest thing of the kind ever published."—*Rocky Mountain Daily News.*

"A large quarto, printed with clear, bold type and on the best paper, and bound in a richly decorated cover, 'Wild Flowers of Colorado' is a book of unusual beauty."—*Philadelphia Evening Bulletin.*

ÉDITION DE LUXE OF

THE CATHEDRAL CHURCHES OF ENGLAND AND WALES.

PLAN

OF THE

NEW PUBLICATION.

IT IS HOPED TO CREATE FOR AMERICA AN ORGAN FOR THE PUBLICATION OF HIGH LITERARY WORK, OF ORIGINAL THOUGHT IN ALL DEPARTMENTS OF PHILOSOPHY AND SCIENCE, AND OF CONSTRUCTIVE CRITICISM, TOGETHER WITH A GOOD MEASURE OF SUCH ENTERTAINMENT AS IS SOUGHT BY INTELLIGENT READERS.

American Subjects.

It will record and emphasize from an impartial and patriotic standpoint what is best in American nationality, politics, and institutions, including the great philanthropic and economic efforts of the time.

In Philosophy,

it will defend a thorough-going Realism, as opposed to Idealism on the one hand and Agnosticism on the other, while it will give critical notices of other systems—ancient and modern. It will have articles on physiological psychology.

In Politics,

the *Review* will furnish discussions of the most important events at home and abroad. It will belong to no party, but will endeavor to elucidate those principles which are fundamental to our existence and progress as a nation, and underlie all representative government.

In Science,

it will give an account, IN POPULAR LANGUAGE, of recent investigation and discovery, paying special attention to the new sciences so full of promise, such as biology, and so enabling the general reader to keep up with the knowledge of the day.

Religion and Morality.

The *Review* will leave to others the discussions of Theology, but will strive as a principal aim to promote high morality and religion.

In Fiction,

its purpose will be to encourage and foster the best efforts of native writers. It will offer, in addition, choice selections from foreign contemporary literature in order to point out, as far as possible, the merits and demerits of our own fiction in comparison with what others are doing.

In Art

the *Review* will call attention to the best work in every department which may have general interest. In particular it will devote space and the best labor to record the progress of archæology as the great interpreter of historic art, and the necessary introduction to good work in all modern art.

In History

the *Review* will not attempt to rival the great periodicals devoted to that science, but it recognizes the fact that the historic method is just now uppermost in all sciences, and will, therefore, recall to present remembrance whatever may have a bearing on the work of our day or serve to promote the advance of philosophic history.

In Education

the field is so extensive and the number of live technical journals so great that, while the *Review* will give encouragement to the best efforts in all directions, it will especially promote and discuss the higher education in colleges and universities.

The World's Progress and Events.

A new and important feature of the *Review* will be its editorial department, which is to contain epitomes of the most important intellectual work and discovery, not altogether critical, but summarizing at least in part *what the world is doing.*

A New System of Indexing.

It will be seen from the above that the numbers inclusive for each year, if properly indexed, will form a most valuable annual review of the world's progress and events, with the additional advantage of having principal subjects treated by men eminent as specialists in the various departments of human research. It is proposed to furnish an elaborate Analytical Index for each year, and at every *fifth* year of publication to prepare an Index of the preceding five years. Thus indexed, it is believed that the *Review* will have a peculiar and permanent value for ready reference, becoming, in a certain important sense, supplementary to all encyclopedias.

The *Review* will be published six times a year, beginning with January, 1886, under the editorial management of William M. Sloane, Professor of History in Princeton College. When no time is specified, subscriptions will commence with the current number.

Terms: $3 a year in advance, postage free. Remittances may be made in P. O. or express money orders, or in drafts, checks, or registered letters. *Money* in letters is at sender's risk.

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check or postal order payable to Publisher of the NATION.

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27.

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 8,800 copies. The Subscription List is always open to inspection.

NASH & PIERCE, 80 NASSAU ST., New York, have now ready an interesting Catalogue of books, including Americana, Local History, Genealogy, and Miscellaneous, which will be sent to any address upon application.

Young Folks' Cyclopedia.

"A model of construction and arrangement."
—*N. Y. Tribune.*

Superb Gift Books.

Lallah Rookh.

By THOMAS MOORE. This charming Oriental poem is now for the first time produced in a style worthy of itself. It is illustrated with about one hundred and forty photo-etchings made from designs of the best artists in America, together with several from European and Persian artists. The illustrations are printed in a variety of colors on vellum paper, and the text of the poem is set in with the illustrations in artistic style. 1 vol., quarto, bound in parchment paper, and in vellum cloth folio, with stamped ribbons, $15 00; full American seal, gilt, $17 50.

American Etchings.

A series of twenty original etchings by American artists, among whom are James D. Smillie, Thomas Moran, Parrish, Ferris, Garrett, and others, with text and lithographical matter by S. R. Koehler and others. Edition limited to 350 copies, divided as follows: 5 copies, proofs on genuine parchment, text on vellum paper, in parchment portfolio, $150 00; 15 copies, proofs on satin, text on vellum paper, in satin portfolio, $75 00; 40 copies, proofs on India paper, text on vellum paper, in vellum cloth portfolio, $55 00; 40 copies, proofs on Japan paper, text on vellum paper, in parchment portfolio, $35 00; 250 copies, proofs on Holland paper, in cloth portfolio, $15 00.

The Modern Cupid.

A bright, attractive series of verses illustrative of "Love on the Rail," with dainty drawings reproduced in photogravure plates and printed in tints. Edition limited to 370 copies, divided as follows: 5 copies, proofs on genuine parchment, in parchment portfolio, $60 00; 15 copies, proofs on satin, in satin portfolio, $25 00; 35 copies, proofs on Japan paper, in parchment paper portfolio, $15 00; 55 copies, proofs on India paper, in white vellum, cloth portfolio, $15 00; 250 copies, proofs on vellum paper, in cloth portfolio, $7 50.

Lenore.

By EDGAR ALLAN POE. This charming poem is embellished with 14 beautiful and original illustrations by Henry Sandham, engraved in the best possible style. 1 vol., small quarto, cloth, full gilt, $1 50; alligator, assorted colors and styles, $1 50; full American seal, gilt edges, $2 50; full Spanish calf, gilt edges, $3 00.

Eve of St. Agnes.

By JOHN KEATS. With 24 new and original illustrations by Edmund H. Garrett, engraved by George T. Andrew. One of the most artistic of holiday books. 1 vol., small quarto, cloth, full gilt, $1 50; alligator, assorted colors and styles, $1 50; full American seal, gilt edges, $2 50; full Spanish calf, gilt edges, $5 00.

For sale by all booksellers, or sent, post-paid, on receipt of price by the publishers,

Estes & Lauriat, Boston, Mass.

Our Little Ones and The Nursery.

Every little boy and girl should be a subscriber to the most artistic juvenile magazine in the world. Every article and illustration original. Sample copy free to any address. Most liberal terms to Canvassers and Clubs. For sale by all Newsdealers.

One Year, $1.50. Single Copies, 15 cts.

D. Lee Publishing Co., 36 Bromfield St., Boston, Mass.

THREE ART MAGAZINES FOR $5.00.

ART AGE $2, monthly, with Forbes Photogravure supplements. **ART INTERCHANGE** $3, fortnightly, 13 colored plates a year. **ART & DECORATION** $4.50, monthly, over 40 designs an issue. We offer these three papers for the extraordinarily low price of $5.00. (75 saved.) **SAMPLE COPIES** of the three for 50c.; or any one, 20c. Full particulars in catalogue for 2c. In this club of art journals subscribers get, by actual count, over **1500** drawings, working patterns, designs for painting, embroidery, &c., art motives, colored studies and Forbes photogravures; over **1200** reading columns, answers to questions, practical suggestions, criticism, technical information and news. (Mention this advertisement.) Turnure & Gillies Brothers, Pub'rs: **ART AGE, 75 FULTON ST., NEW YORK**

The Portable Bookcase manufactured solely by Lockwood, Brooks & Co., 17 Franklin Street, Boston, Mass., is the most perfect thing of the kind, it being easily moved, and adjustable for books of all sizes. Send for circular or call and see it.

January Atlantic.

Ready Saturday, 19th. Contains:

IN THE CLOUDS. I., II. Charles Egbert Craddock.
THE FREE NEGROES OF NORTH CAROLINA. David Dodge.
TWO BITES AT A CHERRY. Thomas Bailey Aldrich.
GLAUCUS. A Poem. Edith M. Thomas.
POLITICAL CONSEQUENCES IN ENGLAND OF CORNWALLIS'S SURRENDER AT YORKTOWN. (First of six or more papers on American history from the close of the Revolution to the adoption of the Constitution.) John Fiske.
THE PRINCESS CASAMASSIMA. Book Second. XIV.-XVI. Henry James.
BARTER. A Poem. Julie K. Wetherill.
THE NEW PORTFOLIO. A Cry from the Study. Oliver Wendell Holmes.
SESAMES. A Poem. Helen Jackson.
A COUNTRY GENTLEMAN. XLIII.-XLVII. M. O. W. Oliphant.
WILLIAM LLOYD GARRISON.
STEDMAN'S POETS OF AMERICA.
THE CONTRIBUTORS' CLUB. Dialect Difficulties.—Fairview or Plainfield.—The Cheerfulness of Birds.—A Simple Story.

35 cents, $4.00 a year.

E. C. STEDMAN'S WRITINGS.

Poets of America.

With full Notes in Margin and careful Analytical Index. 12mo, $2.25; half calf, $4.50.

MR. STEDMAN'S OTHER BOOKS.

VICTORIAN POETS. 12mo, $2.00. Half calf, $4.00.

POEMS. Household Edition. With Portrait. 12mo, $2.00; full gilt, $2.50; half half, $4.00.

POETS OF AMERICA, VICTORIAN POETS and Poems, in uniform sets, in box. $6.00, half calf, $12.00.

EDGAR ALLAN POE. An essay. With Portrait and illuminated vellum covers. 18mo, $1.00.

Fiammetta.

A Novel. By William W. Story, author of "Roba di Roma," etc. 1 vol. 16mo, $1.25.

This is a novel of Italian life, character, and scenery. Mr. Story's long residence in Italy has made him thoroughly familiar with the most striking and picturesque features of the country and its people.

The Thankless Muse.

By Henry A. Beers, Professor of English Literature in Yale College. 1 vol. 16mo, $1.25.

In this volume Mr. Beers retains such of the poems as he deemed best in the book entitled 'Odds and Ends,' published a few years ago, and adds many new poems besides the title poem. Speaking of the earlier volume the *New York Tribune* pronounced Mr. Beers "an agreeable versifier, of airy and nimble fancies, a cordial lover of fun," and the *New York Times* compared his humor to that of Charles Dudley Warner.

Patroclus and Penelope.

A Chat in the Saddle. By Theodore A. Dodge. New Popular Edition. With Illustrations. 1 vol. 12mo, $1.25.

"One of the most important and valuable treatises on riding in our language."—*Saturday Review, London.*

"An accomplished, observant, clear-headed, good-natured companion."—*New York Tribune.*

"Col. Dodge is a charming teacher."—*Boston Herald.*

"The spirit of the horseman pervades it throughout."—*The Field, London.*

*** For sale by all booksellers. Sent by mail, postpaid, on receipt of price, by the publishers.*

HOUGHTON, MIFFLIN & CO.,

BOSTON.

11 E. 17th St. New York.

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

Anthropoid Apes.

No. 52 of The International Scientific Series. By ROBERT HARTMANN, Professor in the University of Berlin. With Sixty-three Illustrations. 12mo, cloth, 326 pages. Price, $1 75.

CONTENTS: The Development of our Acquaintance with Anthropoid Apes.—The External Form of Anthropoid Apes.—The External and Anatomical Structure of Anthropoid Apes compared with the Human Structure.—Of Varieties in the Form of Anthropoids. — Geographical Distribution, Habits in a State of Nature, and Native Names of Anthropoids.—Life in Captivity.—Position of Anthropoids in the Geological System.—The Anthropomorphism of the Gorilla, Chimpanzee, Orang, and Gibbon.

II.

The Art of the Old English Potter.

By L. M. SOLON. Illustrated by the author. 8vo, cloth. Price, $2 25.

CONTENTS: Early Pottery.—Stone-Ware.—Slip-decorated Ware.—English Delft.—The Brothers Elers and the Stamped Ware.—Salt Glaze.—Earthenware.—Foreign Imitations of English Earthenware.

This is not an attempt at a complete history of English pottery, but of the early progress of the craft in England—of those who made the ground ready for the splendid achievements of the great potters of the eighteenth century.

III.

John Maidment.

A NOVEL. By JULIAN STURGIS, author of 'An Accomplished Gentleman,' etc. 16mo, paper cover. Price, 50 cents.

*** For sale by all booksellers; or will be sent by mail, post-paid, on receipt of price.*

And All Dealers.

Young Folks' Cyclopedia.

"Every child in America should have them."

—*New England Journal of Education.*

A Superb Volume.

ETCHING.

An outline of its technical processes and its history, with some remarks on collections and collecting. By S. R. KOEHLER. Fully Illustrated. 1 vol., folio, gilt top, price, $20 00; one-half morocco gilt, $30 00; full morocco gilt, $40 00.

This volume is of special interest, as it is the first connected history of etching ever written. It is very fully illustrated, containing no less than one hundred and twenty-five specimens, thirty of which are etched plates by old and modern masters. The ninety-five examples in the text consist of photo-typic reproductions of old etchings, illustrating the whole history of the art, from the beginning of the sixteenth century down to our own day, in Germany, the Netherlands, Italy, France, Spain, England, and America.

"A work of great magnitude and importance. . . . There is little or nothing relating to the art which has not been included in the text."—*New York Commercial Advertiser.*

"A handsome holiday art book."—*The Critic.*

"The *Gem* of the season's collection is undoubtedly the book on etching, published by Cassell & Company."—*The Delineator.*

"This work will occupy the first rank among books this year."—*Utica Herald.*

SCIENTIFIC THEISM.

BY FRANCIS ELLINGWOOD ABBOT, PH.D.

This work includes the substance of a lecture delivered last July at the Concord School of Philosophy. It is part of a new philosophy of Evolution, vitalized by the principle of Universal Endocosmic Teleology and by the substitution of the Organic Theory of Evolution for the Mechanical Theory advocated by Spencer and Haeckel. Its purpose is to philosophize the scientific method, and to show that modern science, interpreted by its philosophized method rather than by its non-philosophic special results, leads not to Atheism, not to Agnosticism, not to Idealism, but to a Realistic Spiritual Theism which will satisfy both "the head" and "the heart."

1 vol. 12mo. Price, $2.

The Nation.

NEW YORK, THURSDAY, DECEMBER 17, 1885.

The Week.

SENATOR HOAR'S bill for the repeal of the Tenure of Office Act is a step which the friends of civil-service reform will heartily approve. They have always held that the rule and theory which prevailed down to 1867, giving the President power to make removals without the consent or coöperation of the Senate, were the true ones. The change was made in 1867 in order to put a curb upon the wild cavortings of Andrew Johnson. Previous to that time the commissions to executive officers read as follows: "To have and to hold the said office with all the powers, privileges, and emoluments thereunto of right appertaining unto him, . . . *during the pleasure of the President of the United States for the time being.*" The Tenure of Office Law made it necessary to erase the sentence printed in italics and insert in its stead: "subject to the conditions prescribed by law." These prescriptions were that he should hold the office during the term for which he was appointed unless sooner removed, by and with the consent of the Senate. The President was given power, during a recess of the Senate, to suspend an officer when he had received evidence satisfactory to himself that that officer was guilty of misconduct in office, or crime, or for any reason had become incapable or legally disqualified, but was required to report to the Senate the evidence and reasons for his action. An effort was made in 1869 to repeal this law, and a bill restoring the old order of things passed the House, but was rejected by the Senate. A compromise measure was adopted which decrees in substance that any officer shall hold his office during the entire term for which he was appointed, unless the Senate consents in some form to his removal, and it is under this law that President Cleveland is acting. The restriction upon his freedom of action is illogical and unwise. He has full power of removal over the large class of officers not nominated to the Senate, and every reason in favor of that power in the one case is applicable to its exercise in the other.

Senator Edmunds's idea of uniting his Electoral Count Bill with Senator Hoar's Presidential Succession Bill strikes us as admirable. The two measures not only belong naturally together, but if they are united their speedy passage by both houses will be made more easy and certain. Both measures ought to have been made laws at the last session, and they probably would have been had the Democratic majority in the House been less actuated by partisanship. Now partisan as well as patriotic reasons will prompt the Democrats to favor them, and there is no doubt of their quick passage through the House. Senators Hoar and Edmunds are showing a commendable superiority to partisan influences in thus promptly bringing the bills forward again, but the former has been unable to take this step without taunting the Democrats, and especially Congressman Eaton, of Connecticut, with shortsighted and unpatriotic action last winter.

Upon the occasion of introducing again his bill to establish a Government postal telegraph, Senator Edmunds said that he had so far modified his opinions, since his last presentation of the subject, that he was willing to embody in his plan the purchase of any existing telegraph plant at its actual value, meaning by actual value the sum that it would cost to replace it, and not the price to which watered telegraph stock may have been pushed in the market. He added that he was not willing to wait forever to hear the arguments and testimony *pro* and *con* of outside parties upon so plain a question as Government telegraphy. Of course, a reasonable time will be given for hearing objections, but it is evident that the time has come for deciding the question on broader grounds than the interests of private persons and corporations. The problem has been worked out for us in England and on the continent of Europe. There is little left to the chances of experiment. The maximum of efficiency at the minimum of price is attainable under Government control, provided the guiding principles of civil-service reform are extended to the telegraph in all its parts. Without such rules, enforced by strict legislation, the proposed change would be extremely hazardous. It is possible to establish under Government auspices an *esprit de corps* in the telegraphic service superior to anything known under corporate management. It is possible, for instance, to create a system which shall never be exposed to a strike of operators. But such *esprit de corps* can only be reached by putting the service forever beyond the reach of party politics, and by making all positions and preferments dependent solely upon merit, to be ascertained under prescribed rules. This requirement will be comparatively easy of enforcement if engrafted upon the system in the beginning, before politicians get any hold upon it. The present time is very favorable, in a political sense, for passing a suitable bill, since the Senate and House are controlled by opposite parties, and neither one can get any advantage over the other. It is likewise fortunate that we have a President upon whose good faith everybody can rely to carry out the just principles which Congress may lay down for the telegraphic service. If any Republicans hesitate to intrust the opposite party with the execution of so great a reform, they have it in their power to put any checks they please upon the President, through their control of the Senate, before whom all nominations of any importance must come for confirmation.

Among the amendments to the House rules offered on Wednesday week was one by Congressman Beach, of this State, providing that all eulogies of deceased members shall hereafter be delivered on Sundays. It is rather singular that nobody ever suggested this system before, for it would only be an official recognition of a custom which has always prevailed in many parts of the country—that of appointing "funeral obsequies" in all possible cases for Sunday. Anybody who was reared in a rural community in any Northern State will readily recall what anxiety was always shown to bring this about. To such lengths was this carried that, although considerations of convenience as well as sanitary rules suggested that burial should take place on the second or third day after death, every possible effort would be made, on the one hand, to prolong this period in case the victim had died as early in the week as Monday or Tuesday, while, on the other hand, in case he died as late in the week as Saturday, equal haste would be exhibited about the last rites, so that in either case they might be performed on Sunday. The reason was that a funeral was one of the great events in such a community, and that a thorough observance of the occasion required that it should fall upon the day when everybody was at leisure to participate. The full absurdity of the custom was only realized when, as was pretty sure to happen, the family were the more strenuous in insisting upon funeral ceremonies in the church on Sunday in proportion as the deceased was an obscure person, whose standing was such that very few people would take the trouble to pay respect to his memory if it was going to involve the loss of a working day.

Secretary Manning's special report on the collection of duties is a very able and painstaking document. Although chiefly important to dealers in foreign goods, and possessing only a secondary interest to the general reader, it throws a good deal of light on the tariff question, and enforces some broad principles which ought to arrest public attention. It is a long narrative of the struggle of the human understanding with "the existing complicated tariff law." This phrase occurs so frequently in the report that the reader is moved, when he throws it down, to consign the whole tariff to the infernal gods. The conviction is established in every candid mind that it is impossible to execute such a law so that it shall yield the results intended by it. There has long been a consensus of opinion among merchants that honest importation of certain large lines of goods is impossible under the law; that the best intentions of the customs officers, aided by the highest intelligence, are paralyzed and frustrated by the law itself. It would, perhaps, be safe to add that no machinery can be devised that will help the case, so long as the present rates of duty are retained. These duties offer so high a temptation to smuggle that the honorable merchant is driven from the field as an importer, and compelled to buy from the consignee of the foreign manufacturer.

There is a touch of humor in the plaint on page 7 that the foreigner does not avail himself of the numerous decisions of our courts showing what is the "actual market value" of goods manufactured for the American trade. These goods, it should be observed, are different from any products made for any other part of the

world—designedly so, for if the same goods were sold in Lyons, or Crefeld, or Zurich, it would be perfectly easy to learn what they were sold for. But they are not sold there at all. Not a yard is ever seen in the street, at the places of production. The foreigner is not subject to our laws. He cannot be prosecuted for perjury—if a false custom-house oath falls under that designation. We can only appeal to his feelings and his sense of rectitude to do the square thing. We offer the highest possible incentive to him and to examining officers to do the square thing by the each other and to cheat the Government. This offer is even extended, in an indirect way, to the "merchant appraiser," in cases of appeal, as, of course, he does not want to make an enemy of the man whose goods he is buying from day to day, and may easily adhere to the weight of sworn evidence, although he may know to a moral certainty that the goods cost 50 per cent. more than their invoice value. Given such a tariff and such machinery for enforcing it, no wonder that the foreign manufacturer turns a deaf ear to the lucid decisions of our courts showing him how he ought to estimate "actual market value." The remedy of specific duties for such evils is open to the serious objection that it imposes a higher rate of duty on the poor than on the rich. No farmer's wife, no servant girl, is too poor to wear silk and velvet in some form, on the bonnet, or around the throat, or waist, or as dress trimmings. Moreover, silk mixtures are infinite in variety and style, and new varieties and styles are coming out all the time. To impose an unvarying duty by the pound or yard on all goods of which silk is a component part of chief value, would be to tax the farmer's wife and the servant girl in many cases 100 per cent. where the millionaire, with his costly stuffs and laces, gets off with 25 per cent. Such a system would put a dangerous weapon in the hands of the agents of the Cobden Club.

The reënactment of the "Moiety Law" is faintly suggested by Secretary Manning in his special report on the collection of duties, as a means of executing "the existing complicated tariff act." This law, it will be remembered, went down with a crash, in the year 1874, when the fact became known that it had been made the instrument for blackmailing the firm of Phelps, Dodge & Co. in the sum of $270,000. The utmost efforts of the best political machine ever known in the United States were put forth to save the Moiety Law, but they were unavailing. It armed the moiety-hunters with powers unheard of outside of Turkey, and it created a corruption fund of truly Oriental proportions. As soon as the light was thrown upon it an imperious public opinion demanded its repeal, and it was repealed. It ought not to be reënacted. No evils that it can cure are half as bad as itself. Better lose all the revenue that is lost for the want of it than raise a new crop of Joyces and Sanborns in the shadows of the Custom-house. The end sought to be reached by the Moiety Law—the detection of smugglers and undervaluers—can be gained much more effectively by lowering the extravagant duties which tempt men to smuggle and undervalue.

The recent advance of $8 per ton in the price of steel rails is made possible by the exorbitant duty of $17 per ton. The country is full of broken-down and non-paying railroads, which are required to pay this atrocious tax to the owners of twelve or fifteen rail mills. A duty of $17 per ton is equal to 75 per cent. ad valorem. This tax falls necessarily on the persons and property transported by railways. The renewal of trackage is one of the operating expenses of the roads, which must be paid out of the gross receipts. All shippers as well as all railway stockholders and bondholders are interested in having this tax reduced. If they possessed a reasonable measure of enlightened self interest, they would unite in demanding a reduction or repeal of this tax, and if they should make such demand they would obtain it. A few years ago the American Medical Association passed a resolution requesting the repeal of the duties on quinine. The request was complied with almost as soon as made, and with such haste that Congress forgot to repeal the duties on the raw materials of which quinine is made. The manufacturers of quinine closed their works in infinite rage, determined to show that American industry was ruined. Finding that Congress was indifferent to their ruin, they reopened them and commenced making quinine in competition with all the paupers of Europe and Asia, and have succeeded very well. The same result would follow if every cent of duty were taken off steel rails, and it would certainly be taken off if the consumers of rails would take a tithe of the pains to secure that end that the rail makers do to prevent it.

The death of Mr. Vanderbilt has been the means of giving us another dose of the old commonplaces about the vanity of riches, and about the impossibility of carrying with us out of this world any of the treasures which most contributed to our happiness while in it. The articles of the newspapers on this subject have been reinforced, too, by the sermons which the Advent missioners have been delivering to the business men. But there is probably no triter theme. Nobody knows more about the vanity of wealth than the men who have it. They feel keenly the difficulty of keeping hold of it, as the world now is, and see illustrations of this difficulty every day in the careers of their friends and neighbors. They probably never feel a pain or ache, or receive a warning from their doctors, without thinking sorrowfully on the inevitable separation from the good things of this world which death will bring with it. They realize this, in short, so much more vividly than the poor man does, that the poor man's reminders to them that they can carry nothing with them into the undiscovered country, have a somewhat ludicrous sound.

Nobody is probably ever influenced in the smallest degree in the management of his fortune by any forgetfulness of these consequences or accompaniments of death. No preacher ever really tells him anything new on this subject. What calls for criticism in the conduct of our rich people is not any foolish fond expectation that they are going to enjoy their riches beyond the grave, or any insensibility to the fact that riches have wings, and that this life is short and full of trouble. Nor is it the inordinate estimate they put on wealth as an instrument of social power and influence. In this, it must be honestly said, they are, at least in this part of the world, far less blameworthy than the poor. It is the poor people who make most of the fuss about great fortunes, and look on the owners of them with most curiosity and reverence. When one sees the amount of interest the press and its readers display in the doings and sayings of anybody who has over $10,000,000, the way he is watched and chronicled and quoted, and the amount of rubbish that is published about his house, and his furniture, and his yacht, and his tastes and habits, the wonder is that our rich men are nearly as simple and unpretending as they are. The millionaires now occupy in popular curiosity, and one might almost say admiration, the place which the lecturers and orators occupied before the war, and the generals for a short period after the war. They are the heroes of the hour, the persons whom the country people are most eager to see and hear about, and whose houses they are most anxious to have shown to them when they come to New York. Our millionaires, in truth, behave very well under this worship. Jay Gould himself resists it with much good sense and moderation. It is, in short, the community which is to blame, and not the rich man, when he takes himself too seriously, and thinks himself far wiser and better informed, and abler, more important, and possessed of more rights, than he really is.

The Massachusetts Reform Club entertained Mr. Dorman B. Eaton at a dinner on Saturday, in recognition of his long, eminent, and self-sacrificing services to the cause of civil-service reform. The occasion was made remarkable by the appearance of James Russell Lowell as an outspoken and barefaced Mugwump, and of Mayor O'Brien as an out-and-out civil-service reformer, in which character, and also as a candidate for reëlection, he was greeted with hearty applause. Mr. Lowell enlivened the occasion by producing evidence that Joseph Addison, as editor of the *Spectator*, was the first Mugwump who had put himself on record by calling for the union of all good men to oppose the placing of corrupt men in office.

By the death of Mrs. Newberry the city of Chicago secures the greatest endowment for a public library that any American city holds. The late Walter L. Newberry was one of the early settlers of Chicago, who "entered" a large tract of land on the north side, and had the sagacity or the inertia to hold on to a large part of it through all periods of panic as well as through all periods of speculation. He died on board a steamer between Liverpool and New York some seventeen years since, leaving a widow and two daughters. He left a will giving one half of his estate for the purposes of a public library to be situated in the north division of Chicago, provided his daughters should die without issue, but this provision of the will was not to be executed until after his wife's death. The two daughters died without issue, and now the death of the widow is announced by a cable telegram

from Paris. The portion of the estate which falls to the public library is estimated at $2,500,000. When Mr. Newberry died there seemed to be slight chances that the city would ever get this benefaction. The two daughters, being attractive as well as rich, were much exposed to the risk of being married and becoming the mothers of families, the more especially as one provision of the Newberry will left the bulk of the estate to the daughter who should first be the mother of a male child, and should give him the name of Walter Newberry. Both daughters perished of consumption a few years after the death of the father. So Chicago now comes by her own—in part—for the advance in real estate which has made this great benefaction possible might equitably be claimed as a public dowry. Certainly Mr. Newberry did very little to earn $5,000,000, unless we consider it earning to deny one's self the luxuries and even the comforts which wealth puts in one's reach. He was an extremely penurious man, and one of the least public-spirited of all the wealthy men upon whom the unexampled growth of Chicago has heaped great riches. But the whirligig of time has not only given Chicago the means for establishing the greatest public library in the land, but has rescued the name of Walter Newberry from oblivion and inscribed it among those of the benefactors of the human race.

The idea that champagne may serve as a commercial barometer will doubtless strike some people as odd, but experience has shown that its consumption rises or falls in close correspondence with the activity or depression of business. The American consul at Lyons, France, has been looking over the records, and finds that the demand from the United States decreased in the amount of $1,867,459 during the year after the panic of 1873. It is therefore a sign of returning prosperity that the shipments from Lyons to this country during last October —the month when supplies for the holiday season are chiefly ordered—were valued at $343,586, or not much short of double the $201,589 for October, 1884. The Blaine organs, it is true, may claim that the increased shipments are really due only to the fact that American free-traders have been furnished an unusually large supply of "British gold" this year, in view of the election of a Democratic President, and that they have been expending the money in storing their own wine cellars, instead of using it for its intended purpose of bribing protectionist Congressmen. It might be hard to refute this charge if it were not that the great prohibition State of the Union is as prosperous as the champagne dealers, as shown by the remarkable increase in the deposits of the Maine savings banks during the past year recently reported. It would be easy enough to maintain that the increased imports of champagne only show that the rich are growing richer under Democratic rule at the expense of the poor; but even Mr. Blaine himself will find it hard to convince his neighbors that the poor are growing poorer since Cleveland became President, when they see that there are nearly 4,000 more depositors in the savings banks of the State to-day than there were a year ago.

A report sent last July by the Mexican Consul-General in New York to his Secretary of State, in answer to a series of questions addressed him by the latter, gives a part of the Mexican side of the question of the commercial relations between the two countries, and thus has a bearing upon the recommendation of President Cleveland in reference to the treaty of reciprocity with Mexico. Señor Navarro declares that Mexican merchants have an excellent standing in the New York market, their payments being made promptly and honorably. Asked as to what tropical and semi-tropical products ought to be made to play the largest part in Mexican exports, he mentions bananas, cocoanuts, lemons, oranges, tobacco, coffee, and sugar. It is his opinion that the surest impulse to the Mexican export trade with this country can be given by thorough-going reforms in the Mexican tariff, so as to place fewer obstacles in the way of importers and to facilitate reciprocal commerce. He thinks that subventions to the various steamship lines plying between Vera Cruz and the ports of the United States would accomplish little in the way of stimulating trade, and that a more urgent step, after tariff reform, is a reduction in the charges for freight, which are enormous. He complains that injustice is done to Mexican tobacco in the fact that all the finer grades reach the United States by way of Havana, and are sold as if grown in Cuba.

All the signs seem to point to the conclusion that the recent disturbances in Nuevo Leon are the first gun in the Mexican Presidential campaign of 1888. It may or may not be true, as the telegraph has asserted, that Diaz is paving the way for his father-in-law, Romero Rubio (not Robio, as commonly printed). The significant thing is that he is invading one of the strongholds of Gonzalez, and seems bent on preventing the latter's return to power. The "favorite son" in politics has played a much more conspicuous part in Mexico than with us. Each of the political chiefs has a State or two which he looks upon as his peculiar appanage. Diaz himself, like Juarez before him, has always been able to count upon the support of Oaxaca. Gonzalez, since stepping down from the Presidency, has show himself to possess almost absolute power in Guanajuato, of which State he is now Governor, and to exert a preponderant influence in Guadalajara and in Nuevo Leon. It would appear that Diaz is now proposing to wrest the supremacy of the latter from his rival. The trouble began in the municipal elections, held early in November. The Federal troops, evidently acting on a hint from the capital, interfered in the most outrageous manner in these elections. The reason is that, under the electoral laws of Mexico, it is almost a necessity for a successful Presidential candidate to control the majority of the *ayuntamientos* of a State in order to secure its vote. Governor Sepúlveda and the State Legislature would not submit to this military interference, and refused to declare the election of the Federal candidates. The next step in the intrigue was the fomenting of a revolution in the State, in the hope that the Governor would be forced to abandon his post, so that a military rule might be established. That is the cause of the recent situation; Sepúlveda, with the tacit aid of Gonzalez, withstanding the revolutionists, who were apparently acting with the connivance of the Federal troops.

The election of the valued London correspondent of the *Nation*, Professor James Bryce, for South Aberdeen, is a striking illustration of the usefulness of that feature of the English system which allows electoral divisions to get their representatives wherever they please, all over the kingdom. Mr. Bryce sat in the last Parliament for the Tower Hamlets, one of the London boroughs. That has been, however, cut up into several divisions by the late act, and the number of members increased, and he, we believe, although a warm friend of Ireland, came under the ban placed on all Liberals, except one or two, by Parnell. As there is a strong Irish vote in that region, this, we think, though we are not sure, compelled him to seek a constituency elsewhere, and he has been returned by one of the divisions of Aberdeenshire by a large majority over his Tory competitor. In this country, when a man, however able, gets out of favor, for any reason, with the local managers of his district, he is completely thrown out of public life, and the country loses his services probably at the very moment when they are most valuable. In England it is all but impossible for this to happen to a man of mark. There is sure to be some constituency which is proud to have him for a representative. This insures to every man who likes politics, and shows real capacity for it, the possibility of making it a career, and staying in it during his working years, in spite of occasional differences with his constituents.

That the Parnellites in the House of Commons would be a very motley body, as regards social condition, has long been evident to those who knew how complete was the breach which the land agitation had made between the bulk of the voters and the educated and well-to-do classes in Ireland. The Irish members of the House have since the Union consisted almost exclusively of land-owners, great or small, with a sprinkling of barristers, and an occasional manufacturer, brewer, or distiller. But they, even more than the English or Scotch members, were what are technically called "gentlemen." Parnell himself is a good specimen of what they used to be. The appearance in the last Parliament of men like Biggar, who is a very illiterate pork dealer, and like Healy, who was an ill-favored attorney's clerk—though he has turned out an extremely able man—was a foretaste of what was coming if the suffrage were further extended and the land agitation were successful. The present state of things—that is, the complete loss of political leadership by the educated and well-to-do classes—has been long foreseen by wise observers as likely to come about in case the British Parliament failed to satisfy Irish demands both with regard to the land problem and home rule. Grattan foretold it seventy years ago. The absorption of the gentry in the English aristocracy was certain to lead, sooner or later, to the breaking loose of the peasantry, and their appearance in the political field under the guidance of the butcher and baker and candlestick maker.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 9, to TUESDAY, December 15, 1885, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND'S message was received throughout the country with expressions of praise and good-will from both parties.

The New York Chamber of Commerce on Thursday adopted a report heartily approving of the recommendations of the President and Secretary of the Treasury in regard to a suspension of silver coinage.

The Republican Senators held a caucus on Friday in regard to the course which they should pursue toward the President's nominations. They adjourned without agreeing, but it is probable that as a rule the Democrats appointed, where their private character is good, and their public course does not involve a taint of dishonesty, will be confirmed. Each case will be considered on its own merits. The President will be called sharply to account if it shall be discovered that in any of his appointments he has violated the principles of which he has said so much.

In the House of Representatives on Wednesday the Speaker received permission of the House to appoint the Committees on Rules, Accounts, and Enrolled Bills. Mr. Morrison (Dem., Ill.) offered a resolution, for reference to that Committee when appointed, continuing in force the rules of the Forty-eighth Congress, with certain modifications, among them being one for the distribution of the work of the Appropriation Committee among the other standing committees of the House. This Committee is still left with jurisdiction over the legislative and sundry-civil bills. The well-known Rule 21 is proposed to be amended by striking out the clause which provides that no provision in any such bill (general appropriation), or amendment thereto, changing an existing law, shall be in order, except as being germane to the subject matter of the bill, or shall retrench expenditures by the reduction of the number and salary of the officers of the United States, by the reduction of the compensation of any person paid out of the Treasury of the United States, or by the reduction of amounts of money covered by the bill. The reference of the resolution was ordered.

In the Senate on Thursday Mr. Edmunds introduced a bill for the establishment of a postal telegraph, which was referred to the Committee on Post-offices and Post-roads. Mr. Edmunds said it was the same bill that he had introduced at the last session of Congress, which went to the Committee on Post-offices and Post-roads and was reported upon by that committee so late in the session. He hoped they would now take the earliest opportunity to report on it. He wished to press it to a vote after reasonable discussion and examination.

On Monday Mr. Hoar reported favorably in the Senate the Presidential Succession Bill.

Mr. Edmunds, on Tuesday, reported favorably a bill to relieve Gen. Alexander R. Lawton, of Georgia, of his political disabilities. Mr. Edmunds said it was well known that General Lawton had last spring been appointed to an important position under the Government, but it having been understood by some that he was laboring under political disabilities, General Lawton had then, with high sensibility, withdrawn himself from the consideration of the President. The bill was passed. Mr. Edmunds introduced a bill granting a pension to Mrs. Julia D. Grant, and another granting her the franking privilege.

The fact that the nomination of Morris Thomas, of Maryland, to be Indian Inspector, has not been sent to the Senate, is interpreted by some persons as indicating that the President has decided to cancel this appointment, against which Maryland reformers have vigorously protested. The authorities are not willing to say what the withholding of the appointment means, and all conclusions therefore are speculative.

The annual report of Attorney-General Garland shows that, during the year, 1,658 civil suits and 11,977 criminal prosecutions were terminated in the various United States courts. He discusses the plans suggested for the relief of the courts and endorses the general features of the Davis bill for the establishment of a Court of Appeals, or intermediate court, as best adapted for the purpose. That measure, however, does not, to his mind, cover the case, and he suggests a plan based on that bill, the main features of which were incorporated in the President's message to Congress with his commendation. He suggests the advisability of building jails at each place in the country where United States courts are held.

Thomas Morrow, editor and proprietor of the *Gazette* of Washington, has been arrested, charged with conspiracy in procuring the appointment of Frank Thomas as a clerk in the Agricultural Department, Thomas not performing any service for the Government, and paying his salary over to Morrow. A similar warrant was issued for General Carmen, ex-Chief Clerk of the Agricultural Department.

The dinner given to Mr. Dorman B. Eaton, in Boston, on Saturday evening was a very brilliant entertainment. Besides Mr. Eaton the speakers were Prof. James Russell Lowell, Collector Saltonstall, General Francis A. Walker, Mr. C. W. Clifford, and Mr. William Everett. Mr. Lowell closed his remarks as follows: "If we consider the enormous difficulties of Mr. Cleveland, if we consider that he is confronted with a mass of offices such as hardly exist in other countries, filled with men, many of them excellent, but a great many of whom have been put into office on account of that spoils system which we are organized to resist, but which makes of the public office a public almshouse for the incompetent—now, I ask you, gentleman, would President Cleveland—I won't say be doing his duty to his party, for I think he is a man quite above that, who is quite aware that when he becomes President he becomes President of the United States—would he be qualified for the position unless he made a good many removals? Don't you think it would be better and wiser for the progress of civil-service reform if equality—I mean numerical equality—could be introduced into the public service before President Cleveland's term expires? I am very strongly of that opinion. I certainly never objected to my own removal. It was certainly necessary."

The Supreme Court of Ohio has decided to overrule the decision of the Hamilton County Circuit Court, and order the certificates of election issued to the Democratic Senators and Representatives. This will make the next Senate stand twenty-one Democrats to seventeen Republicans, but on joint ballot the Republicans still retain three majority, without regard to the Hamilton County delegation.

The report made by the United States Grand Jury, which has just concluded its labors at Salt Lake City, reviews and sustains the published charges that Mormon Church dignitaries contributed money to induce disorderly women to visit the Mormon capital to entrap United States officials.

A Youngstown (O.) despatch says: "The recent advance in raw materials for the manufacture of iron and the increased price for pig metal have caused activity about the idle blast furnaces in this vicinity. Every idle blast furnace near here, with one or two exceptions, has started. In Cleveland, the only ore market for this vicinity, not a ton of ore can be bought. Furnace men in this valley have for some time anticipated this move, and are stocked to last until spring."

Mayor Grace on Tuesday morning received from Chief Engineer Martin, of the East River Bridge, his annual report for the year ending December 1, 1885. Mr. Martin goes into a very elaborate description of the working of the cable grip in use on the cars. He says further that it is the most suitable for the bridge cars of all grips now in use. The total receipts from tolls were $618,914 55. Of this amount $23,011 34 were from foot passengers, $58,468 32 for vehicles, and $537,435 09 from passengers on the railroad. The receipts this year are $84,921 75 in excess of the amount received for the year ending December 1, 1884. The number of passengers carried last year was 8,529,840, producing a revenue of $426,492. This year 17,023,237 passengers were carried, yielding an income of $537,435 09. The number of foot-passengers crossing the promenade was 3,602,089, or 328,911 less than last year, and the revenue from this source shows a decrease of $16,289 66. The amount of tolls collected on the carriage roads is also smaller by $9,732 68 than last year. The total number of passengers crossing the bridge since its opening, May 25, 1883, is 38,418,366, divided as follows: Railroad, 26,635,377; promenade, 11,782,989. The total amount of revenue from tolls since the opening is $1,291,680 75—from the railroad, $1,018,042 09; from the carriage ways, $168,817 32, and from the promenade, $104,821 34.

The funeral services of William H. Vanderbilt were held in St. Bartholomew's Protestant Episcopal Church, in this city, on Friday morning. The body was then taken to Staten Island, where it was deposited with simple ceremonies in the receiving tomb of the Moravian Cemetery at New Dorp. When the Vanderbilt mausoleum is completed the body will rest in it.

The will of Mr. Vanderbilt was filed at noon on Saturday in the Surrogate's Chambers in the County Court-house. The will bequeaths $10,000,000 to each of his eight children, $5,000,000 of which in each case is in trust. In addition to this, $2,000,000 is left to Cornelius Vanderbilt. The four sons of the dead man are made the trustees, the property left to each son being committed to the trusteeship of his three brothers. He leaves to each of his daughters the houses they live in absolutely. To his grandson William H., the son of Cornelius, he leaves $1,000,000, and to the widow is left the house at Fifty-first Street and Fifth Avenue, his paintings, library, stables, horses, etc., and an annuity of $200,000, together with $500,000 which is left to her absolutely. At her death the house, picture gallery, and stables are to go to his youngest son George Vanderbilt for his life, and at his death to such son of his as he may designate by will. If he shall die leaving no son, the property is to go to the eldest son of Cornelius Vanderbilt. Sundry bequests amounting to about $1,200,000 are left to charitable objects, and annuities ranging from $2,000 to $2,500 are left to distant relatives. The remainder of the fortune is divided equally between Cornelius and William K. Vanderbilt. He directs that all of the railroad stocks bequeathed to his children shall be held in bulk and administered for the best interests of all, and that none of them shall be disposed of without the consent of all concerned.

B. Gratz Brown, who was the candidate for Vice-President on the Greeley ticket in 1872, is dead.

The sudden death of Mrs. Newberry, widow of the late Walter L. Newberry, of Chicago, was reported by cable from Paris on Thursday. This releases one-half of his large estate, valued at $5,000,000, for the purposes of a public library in Chicago.

John Langdon Sibley, who was Librarian of the Harvard College Library for twenty-one years, and has been more or less closely connected therewith for sixty years, died on Wednesday at his home in Cambridge, Mass., after an illness of some duration. Mr. Sibley was born on December 29, 1804, in the town of Union, Maine. He obtained an education in spite of his humble circumstances. He was a

student at Phillips Exeter Academy, and was graduated at Harvard in 1825. Mr. Sibley's pub ished works are: 'Index to the Writings of George Washington,' 1837; 'A History of the Town of Union, Me.,' 1851; 'Index to the Works of John Adams,' 1853; 'Fort Pownal and Brigadier Waldo'; 'Notices of Account-Books of Treasurers of Harvard College, from 1669 to 1752'; 'Notices of the Triennial and Annual Catalogues of Harvard University, with a reprint of 1674, 1682, and 1700,' 1865; and three biographical volumes of 'Harvard Graduates,' from the foundation of the College. He also edited the American reprint of George Chalmers's 'Introduction to the History of the Colonies,' a work which was suppressed in London. Throughout his career he was noted for his benefactions to needy students. He has given about $30,000 to Phillips Exeter Academy for that purpose.

Commodore Charles Lowndes died at his country seat near Easton, Md., on Monday, at the age of eighty-seven. He was a brother-in-law of the late Admiral Buchanan of the Confederate navy. Commodore Lowndes and Admiral Buchanan took opposite sides in the late war, and because of the relations between them Commodore Lowndes was suspected of being a Southern sympathizer. During the war he was placed upon the retired list. He was appointed a midshipman in 1818.

Gen. Robert Toombs, of Georgia, the noted ex-Confederate, Senator of the United States before the war, Secretary of State of the Confederacy, and General in the rebel army, died at his home in Washington, Georgia, on Tuesday. He was seventy-five years of age. General Toombs was to the last irreconcilable to the result of the war.

FOREIGN.

All but six seats in the British Parliament have been filled, and it is closely estimated that this body will contain the following party representatives: Liberals 334, Conservatives 250, Parnellites 86, giving the Tories and Nationalists a majority of two over the Liberals.

Mr. Gladstone has written a letter referring to the election, in which he says: "It has been a wonderful election and will prove that we have gained on the Tories since 1880, if allowance is granted us of fifteen seats lost through double candidatures and fifteen seats Mr. Parnell gave the Tories." Mr. Thomas P. O'Connor, member of Parliament-elect for the Scotland division of Liverpool, and Mr. Parnell's trusted lieutenant, in an interview, defined the Nationalist's view of home rule for Ireland as like that of the Government of Canada—the Irish members not to sit in the Imperial Parliament, and the people of Ireland not to contribute toward the expenses of the Imperial Government, nor to share in the payment of the national debt. Regarding funds to carry out the Nationalists' measures, Mr. O'Connor said the Parnellites could easily raise £100,000 in America.

It is asserted on good authority that Mr. Gladstone has a carefully prepared scheme of home rule, in which he feels the keenest interest, and is working upon it at Hawarden all the time. The details are kept a profound secret from every member of the party except three, viz.: Earls Granville, Spencer, and Rosebery. All these recently visited him in turn at Hawarden. It is said to be the dream of his life to pass this measure entire. Any such scheme, he calculates, would cost him twenty-five votes in his own party, but if the Irish support him that will not matter.

The London *News* is anxious that Mr. Gladstone should take office in order to prevent the Conservatives from fomenting an anti-Irish agitation to secure the support of the Whigs.

Sir Charles Dilke said on Monday that the Radicals would not obstruct, but would attempt to shape the tariff policy.

The London *Standard* (Cons.), of Monday morning, was outspoken for the refusal of Mr. Parnell's demands. To acquiesce in them, it says, would be suicide; to compromise, folly.

Mr. Bradlaugh has entered into negotiations with the Liberal leaders. He proposes not to present himself at the bar of the House of Commons to take the oath of office at the opening of Parliament, provided the Liberals will introduce and support a bill allowing members-elect to affirm instead of taking the oath.

Tennyson writes that he believes disestablishment and disendowment would be a prelude to the downfall of much that is greatest and best in England. There are doubtless abuses in the Church, but they are remediable. He wishes that the politicians who look upon America as an ideal Government, would borrow her conservative restrictive provision in the fifth article of the Constitution as a safeguard to England's Cons itution against ignorant and reckless theorists.

The British Cabinet had a session of two hours and a half on Monday, and decided to meet the new Parliament and to submit a programme dealing with the subject of county government in England and Ireland, English church reform, and land tenure. The Cabinet unanimously refused to receive or to make overtures for an alliance with the Parnellites. It is asserted in London that Mr. Gladstone has determined to force the fighting against the Tories at the very threshold of the new Parliament, and will move a vote of want of confidence in the Government on the first day of the session. He expects Parnellite support.

Russia has protested against Turkish intervention in Rumelia, and, in consequence of Austria's interference in Servia, is preparing actively to support Bulgaria. It was officially announced on Friday that Servia would abide by the decision of the Powers if compatible with her interests and dignity.

Prince Alexandria, of Bulgaria, replying to the Powers, says the Servians must evacuate Widdin. He is willing to disarm if Servia will indemnify Bulgaria for losses sustained by the war.

It was reported from Vienna on Thursday that peace negotiations had begun in earnest on the basis of the personal union of the Bulgarias and the nomination of Prince Alexander to be Governor of Rumelia for five years.

The London *Times* said on Saturday morning: "The Eastern difficulty may be regarded as virtually settled. The Powers have agreed to recognize the union of the Bulgarias. A demarkation Commission has been appointed, which insures an armistice of a month, and will hardly fail to secure peace."

A military commission will set out immediately from Belgrade to mark out the armistice frontier.

A rumor is current that a Russo-Montenegrin plot existed to form a Servian State to consist of Servia, Bosnia, Herzegovina, and Montenegro; that an assassin was hired for 40,000 rubles to kill King Milan, and that an accomplice divulged the plot.

The Porte sent a note to Italy protesting against the seizure of Massowah. Italy replied that the occupation of Massowah does not affect the sovereignty of the Sultan.

A great rebel army is forming in the Sudan, and the British Government has decided to re occupy Dongola. A new expedition will be sent to Egypt immediatly.

It is now clear that the situation in Egypt is serious enough to compel General Stephenson to leave hastily for the front. The garrison at Koyeh appears to be cut off and besieged. The British force there consists of 600 Highlanders, Hussars, and Royal Engineers, and one battalion of Egyptians. The little steamer *Lotus*, while with her gun shelling the enemy, has already been hit several times Koyeh is strongly fortified, but is 100 miles south of Wady Halfa, with seven small cataracts between. There are 14,000 British troops in Egypt, but three fresh regiments have been ordered to reinforce them, and are hurrying to the front.

The belief is increasing in Calcutta that the British Government does not intend to annex Burmah.

General de Courcy has been recalled from Anam. General Négrier succeeds in command of the French troops. General de Courcy is accused of having in his reports magnified the difficulty of the situation in Anam, and of imprudently meddling with the Anamite authorities, thereby exciting the natives to the verge of a general revolt.

The Pope has protested to the French Government against the action of M. Goblet, Minister of Public Instruction, in stopping the stipends of thirty-nine priests for alleged intervention in recent elections for members of the Chamber of Deputies. The Pope claims that the suspension of religious stipends is an infringement on the provisions of the Concordat.

The funeral services over the body of the late King Alfonso took place in Madrid on Saturday at the Church of St. Francis the Great. The large edifice was crowded with distinguished people. All the sovereigns of Europe were represented. The members of the diplomatic corps were also present. The civil and military pageant was an imposing spectacle, and was witnessed by an immense crowd.

Don Carlos, of Spain, announces that the reports referring to the marriage of his son to the Infanta Mercedes are premature. Don Carlos declares that he will never seek to benefit his cause by an alliance which would be regarded as tantamount to renouncing his rights, or by recognizing another's claim to the throne.

Ferdinand, father of the King of Portugal and at one time regent of that country, died on Tuesday at the age of sixty-nine.

M. Adolf Deucher, at present Vice-President of Switzerland, has been elected President for the year 1886. He is a Radical.

The German Bundesrath has unanimously approved the bill for the construction of the projected ship canal between the Baltic, the Elbe, and the North Sea. It has also approved a treaty of commerce with San Domingo.

A son of Meissonier, the celebrated French painter, was terribly bitten on Sunday by a rabid mastiff in his father's garden. The victim was immediately sent to Pasteur for treatment. The latter declares that the patient's recovery is certain.

General Reyes, commanding the Mexican Federal troops at Monterey, received orders from the City of Mexico on Thursday to depose Acting Governor Sepúlveda, and place the State of Nuevo Leon under martial law. Governor Sepúlveda refused to vacate his office. General Reyes undertook to execute the order during the night at the head of 200 soldiers, but was repulsed by Governor Sepúlveda with the loss of three soldiers killed and several wounded. The Governor, however, concluded to surrender on Friday afternoon, and in notifying General Reyes that he would do so was taken prisoner and placed in the military prison. General Reyes then publicly proclaimed martial law over the State and assumed the military Governorship, to which he had been appointed by the National Senate at the City of Mexico.

Quiet has been restored at Monterey, Mexico, but there is an undercurrent of dissatisfaction with the Military Government.

General Ballestares has been appointed Military Governor of the State of Nuevo Leon. Ex-Governor Sepúlveda has been released from imprisonment. Business in Monterey is already recovering.

Riel was buried at St. Boniface on Saturday. About 700 half-breeds were present.

THE KEILEY CORRESPONDENCE.

We confess to having read the Keiley correspondence, which has just been laid before Congress, with a good deal of bewilderment. Mr. Bayard apparently considers the function of representing the United States abroad as an office in the gift of a foreign government, to which our Government is entitled to nominate whom it pleases; and holds that the foreign Government has no right to refuse to confirm the appointment, unless the nominee is disqualified under the Constitution of the United States. It is true he did not take this ground in the beginning, for he recognized "the full and independent right of the King of Italy to decide the question of the personal acceptability to him of an envoy," but he abandoned it as soon as Italy had rejected Mr. Keiley. When Mr. Bayard came to try to send him to Vienna, and the Austrian Government refused to receive him, he took the position that the Emperor was bound to receive him because the reasons he gave for rejecting him were not recognized as good ones by the laws of the United States and American public opinion. Throughout the remainder of the discussion Mr. Bayard's contention was that the Emperor had not complete discretion in the matter; that if he rejected Keiley, it must be for reasons which Americans would approve.

He therefore examines the reasons, and finds the principal one, Mrs. Keiley's religious faith, to be one which Americans cannot approve, and, therefore, concludes (apparently) that Mr. Keiley had a right to go to Vienna whether the Austrian Government wanted him or not, and that in refusing to receive him a deep and grievous wrong of some kind had been inflicted not only on Mr. Keiley, but on the American people. He appears, indeed, to be of opinion that Count Kálnoky ought to have examined the United States Constitution before acting in the matter, as he would there have found that "no religious test shall ever be required as a qualification to any office or public trust," and that "Congress shall make no law respecting the establishment of religion or prohibiting the free exercise thereof."

Now, on the theory which Mr. Bayard has himself accepted, and which all civilized governments have always acted on, this discussion is, to put it mildly, absolutely irrelevant. The Constitution and laws of the United States and the opinions of the American people of course govern the qualifications of all officers who are to exercise their functions on American soil or in American ships; but they do not and cannot govern the qualifications of officers who are to exercise their functions in the territory of other nations. We cannot, and never could, send any kind of men we pleased to be consuls or ministers in foreign countries. The Emperor of Austria is not bound to grant the enormous social privileges and legal immunities with which international usage surrounds diplomatic representatives in his own capital, to anybody whom we choose to pick out for the purpose. The American Mission is not an office in his gift which he is obliged to bestow as we direct. It is well settled that a foreign representative must be a man with whom the Government to which he is accredited will find it agreeable to transact business—that is, whose character, attainments, and manners will make official intercourse with him easy and pleasant. It is nothing to the purpose that he would make a good member of Congress or collector of internal revenue, or that the American people do not object to his religion, or his culture, or his opinions, or his clothes. It is not with the American people he has in this case to do, but with foreigners who are not subject to American laws, nor familiar with American usages, nor responsible to American opinion.

This is not the whole of the matter, however. In all European capitals the foreign Ministers form, *ex-officio* as it were, part of the best society of the place. Everybody connected with the Government, from the sovereign down, is expected to invite them to balls, dinners, and receptions, on a footing of equality with the highest class in that community. If these civilities were not offered in any particular case, it would be considered, and justly considered, a slight to the country which the Minister represented, as well as to him personally. In European capitals, too, and in Vienna above all capitals, this official society has prejudices and requirements and notions of various sorts, which we here either know nothing of or consider absurd, but which there are very important and have, in fact, for social purposes the force of fundamental rules. Therefore, into the question of the acceptability of a Minister at a foreign court there always enters the question whether there is anything about him and his wife, in the matter of opinions, antecedents, occupation, creed, or manners, which will prevent their being cordially received on a footing of perfect equality with the other ladies and gentlemen of the court circle. To allow any man, and especially a married man, therefore, to come to a capital in a diplomatic capacity, who would not be cordially received or whom anything in his history or qualities would expose to social rebuffs, would, on the part of any civilized government, be a most unfriendly act. When the Foreign Minister of any government has reason to believe that an envoy is being sent to him whose family the society of the place will not tolerate, it is not simply his right but his duty to do what Count Kálnoky did in this case—refuse to receive him.

Count Kálnoky, however, managed the matter badly. He ought not to have given any reasons for refusing Keiley. Above all, he ought not to have said one word about Mrs. Keiley. The way in which this lady's name has been bandied about in the matter, and made notorious in two hemispheres, as that of the victim of a social snub, is the most deplorable feature of the trouble. Mr. Bayard is one of the last men on the continent to whom we should think of giving lessons as to what a gentleman should do in any case calling for a gentleman's tact and discretion, but we must express surprise that he did not, as soon as he got the smallest hint from the Austrian Government that the objections to Mr. Keiley were social in their nature, drop the matter promptly, if only for Mr. and Mrs. Keiley's sake. He ought not to have said one word more about it except to Mr. Keiley. When A asks B for an invitation for C to B's house, and is refused it on the ground that B does not care for C's acquaintance, he does not demand B's reasons, or denounce him in the newspapers for his intolerance or for not liking Mrs. C's manners.

To see the inherent absurdity of our position one has only to ask one's self what the Emperor of Austria would have had to do, if he had surrendered to Mr. Bayard's reasoning. Suppose Mr. and Mrs. Keiley to have gone to Vienna. They would not have been received in the best Austrian society, on account of Mrs. Keiley's faith. If Count Kálnoky had asked them to official dinners or balls, other people would have refused to meet them or ignored their presence. The same thing would have happened at Court. Every day's social gossip would have had a tale of humiliation and annoyance inflicted on the Keileys. Their position, in short, would have been intolerable to self-respecting people. The Emperor's or Count Kálnoky's indignation would have been roused, let us suppose, by this exhibition of meanness and intolerance. Now fancy either of them going about to people who did not invite the Keileys, or refused to call on them or notice them in public places, and asking them whether they were aware that the Constitution of the United States forbids the imposition of religious tests, or the establishment of religion, and that the President and Congress can make no inquiry into the religious belief of any official; that "religious liberty is the chief cornerstone of the American system of government, and provisions for its security are embedded in the written charter and interwoven in the moral fabric of its laws; that anything that tends to invade a right so essential and sacred must be carefully guarded against, and that Americans, ever mindful of the sufferings and sacrifices necessary to obtain it, will never consent to its impairment for any reason or under any pretext whatsoever; that in harmony with this essential law is the almost equally potential unwritten law of American society that awards respect and delicate consideration to the women of the United States, and exacts deference in the treatment at home and abroad of the mothers, wives, and daughters of the republic." Suppose these words of Mr. Bayard's to have been read to people who did not ask the Keileys to dinner; would not the laughter have been Homeric?

THE NAVY PROBLEM.

We have long heard that our navy does not possess a single ship which could fight a first-class modern iron-clad, that the bureau system is extravagant and inefficient, that we have nothing of value to show for the $75,000,000 expended on our navy since 1868, and that it is time something was done. The difficulty has been that neither Congress nor the Department had any definite idea what should be done, and so each Congress and each Secretary has bequeathed the problem to his successors. Indeed, one of the great defects of the bureau

system has been that the head of the Department could not exert any effective control over the working of his eight independent and yet connected and interacting bureaus. To this, and perhaps on account of this, must be added that the Navy Department is the one which the head has least been expected to control.

Mr. Whitney is entitled to the credit of not only placing the weakness of his department in a clearer light than his predecessors have done, but of showing a better grasp of the situation. The idea with which nearly every man takes high office is that he has only to sit at his desk and cull out the best from the advice tendered him in order to have all the guidance he requires in the performance of his duties. The truth is, that, in the situation in which Secretary Whitney is now placed, the best men and the best advice can be got only by diligent search on his part; and as we read his report, we fancy that he has some faint perception of this truth. The remedy he proposes would hardly have been found without looking for it. Instead of eight bureaus, each with its independent administrative machinery, he would divide the work of the department into three branches, whose operations could not conflict at any point. First, he would have a Department of Finance and Accounts, to be charged with all the contracts, and to do all the purchasing, auditing, and accounting. Under the present system every bureau advertises separately for proposals, and makes its own independent purchases.

Next would come the Department of Material and Construction, which would have entire charge of the building and repair of the ship, and of her care when not in commission. This branch would do most of the work now divided between the four bureaus of construction, engineering, ordnance, and equipment. The third branch would be that of the fleet and personnel. It would take charge of the ship from the time when the second branch had fitted for service, supply her with officers and men, and direct her movements.

This plan has the appearance of being carefully worked out, and well adapted to the requirements of the situation so far as mere organization is concerned. The real difficulties will begin when it is put into a sufficiently definite form for actual practice. No amount of legislation or administration will avail anything unless the proper material is at hand. It is impossible to read the Secretary's description of the process by which the British Government secures the best engines, without seeing that the condition to which our mercantile marine has been reduced by bad legislation is largely the cause of the failure in our naval management. England gets her engines, not by commissioning officers to design them, but by utilizing the talents of her private engine builders. So far as we are behind her in the number and experience of our engine builders, so far are we at a disadvantage in putting her method into practice.

The men who attempt to inaugurate any radical improvement in our system of naval administration will be hampered by a cause of which it would be hardly appropriate to take official notice. Our navy has been until recently, and we believe still is, organized into two hostile camps, each with its machinery for political action. One camp is that of the line—the navy proper, from ensign to admiral; the other that of the staff, or civil branch—surgeons, paymasters, and engineers. The object of each is to influence legislative and executive action in such way as to gain for itself every possible advantage over the other. Each holds its secret meetings, levies assessments, and employs counsel. The moral influence which these associations exert by spurring their members to promote their class interests is perhaps yet more potent than their action as a body. That the influence of such associations is bad in the extreme, no one acquainted with political machinery in Washington need be told. The reason why their influence enters into the question of administrative reform is that no scheme for such reform is possible without seriously affecting the interests of one or both parties, and it will be difficult, if not impossible, to get any measure through Congress which either side opposes. Efforts have been made by the heads of both the War and Navy Departments to get rid of this disturbing element by prohibiting officers from attempting to influence legislation. It is very suggestive that while the War Department has been fairly successful in this, the Navy Department never has; and naval officers of rank have even gone so far as to deny the right of the Secretary to impose any such restrictions on their action.

The best feature of the report is the clear view of the requirements of naval education. The first requisite to the possession of a modern navy is the skill to construct it, and this is just what our system of education fails to give us. A greater backward step was never taken than when Congress, on the motion of Mr. Robeson, abolished the separate class of cadet engineers at the Naval Academy, and prescribed the same course of study to all. We must now go in the other direction, and train men to be constructing engineers from the beginning.

NATURALIZATION AND EXPATRIATION.

THE President's message contains several references to the position of our naturalized citizens abroad, and recommends certain reforms in our laws concerning the acquisition and loss of citizenship. Fifteen years ago Executive utterances on these topics would have needed no commentary. The "right of expatriation," which our Government had for seventy years been striving to establish, had then recently obtained international recognition by a series of treaties with the German and Scandinavian States of the Continent and with Great Britain. The details of the contest and the questions of municipal and international law involved were at that time fresh in everybody's memory. But the main points in dispute were so satisfactorily settled by the treaties concluded in 1868 and the years immediately following, and the operation of these treaties has been, on the whole, so smooth and noiseless, that there has been little occasion of late years to discuss these once so hotly mooted questions.

The President reminds Congress that Turkey does not yet recognize the right of expatriation—*i. e.*, does not attach to naturalization acquired in a foreign country the effect of extinguishing the allegiance of the Ottoman subject. He reiterates the declaration, familiar in Presidential messages from 1860 to 1870, that "the United States must hold, in their intercourse with every Power, that the status of their citizens is to be respected." It is to be hoped that Minister Cox will have better success with the Porte than his predecessors. It is also to be hoped that our representatives in Russia and Switzerland will be instructed to press for a solution of this question. Russia denies absolutely the right of the native Russian to expatriate himself; and although the Swiss law recognizes foreign naturalization as one of the conditions of expatriation, it does not make expatriation the necessary result of such naturalization. The local authorities of the abandoned domicile must declare that they have no objection to the change of nationality.

In reference to the position of our naturalized citizens in Germany, the President makes a statement not technically accurate. He calls attention to "an apparent tendency, on the part of the Imperial Government, to extend the scope of the residential restrictions to which returning naturalized citizens of German origin are asserted to be liable under the laws of the Empire." There are no "residential restrictions" to which expatriated Germans, returning to Germany, are "liable under the laws of the Empire," except such restrictions as are imposed upon all aliens, whether of German origin or not. German law permits the Government to expel aliens whose presence is regarded as undesirable. Germans who have been naturalized in America are, by the Bancroft treaties, aliens, and therefore subject to such expulsion. The right of every State to expel aliens is indubitable. The United States has always exercised this right in the case of criminals and paupers shipped here from Europe, and the present Administration has directed that it be exercised in the case of all Chinese laborers immigrating by way of Canada. International comity gives the State whose citizen is expelled from the territory of a friendly Power the right to ask for explanation. International *law* gives to no State the right to demand that its citizens be permitted to reside in the territory of another State. Such a right must be sought in the express provisions of a treaty.

This brings us to the real question, which the President's statement tends to obscure. The Bancroft treaties are sometimes imagined to give to our naturalized citizens of German origin the right to return to Germany and to dwell there unmolested for the space of two years. In point of fact, those treaties contain no such provision, express or implied. It is stipulated that the German who resides in the United States for five years and obtains our naturalization, shall be regarded by the German Government as an American. But if he returns to Germany and takes up his residence there without the intention of returning to the United States, he shall be deemed to have renounced his American naturalization. The absence of any intention to return to America may be assumed to exist if he resides in Germany uninterruptedly for two years. It is this last clause which has been assumed to give the German

naturalized in America the right to reside in Germany for two years. It obviously does nothing of the kind. It is simply said that such a person, having actually resided in Germany for two years, is estopped from claiming American citizenship and American protection. The treaties give him no right to reside there two years, or two months, or two days, without the consent of the Government.

The Imperial Foreign Office has uniformly insisted upon this interpretation. In 1878 Mr. Julius Bäumer, a naturalized citizen of the United States, was expelled from Germany four months after his return; and Mr. Philips-born defended the action of his Government on the ground that the existing treaties did not affect the right of expulsion. Our Government appears not to have questioned the strict legality of the German position, but urged that any general employment of the right of expulsion would be a breach of comity and a violation of the spirit of the Bancroft treaties.

Fraudulent naturalization in the United States has been a source of great annoyance to our Government in its diplomatic relations; and the recommendations of the President on this point deserve serious consideration. He calls attention to the fact that our legislation contains no "statutory means for renouncing citizenship by an American citizen, native-born or naturalized." Whether citizens of the United States had the "right of expatriation" was a question hotly discussed a quarter of a century ago. Eminent Justices of the Supreme Court, among them Story, denied it, *obiter;* Kent also denied it. Attorney-General Cushing, on the other hand, affirmed it in an elaborate opinion. But this was clearly an opinion made to order. Foreign governments had been asking awkward questions about the state of our law, and the State Department needed an answer. The Attorney-General furnished the answer needed. But whatever the law was before 1868, it is commonly supposed that since that time the right of expatriation has been firmly established. The Act of July 27, 1868, declares that expatriation is a "natural and inherent right," and that any denial of this right is "inconsistent with the fundamental principles of this Government." In fact, this law did not change the situation in the least. In order that a person may expatriate himself, it must be in his power to do something in consequence of which the law will divest him of his citizenship. As long as the law does not specify to what acts it will attach this result, it is impossible to say whether any act will or will not be adequate.

Only one attempt has been made since 1868 to reform our law in this respect; and it is very fortunate that the attempt failed. A bill was introduced into Congress to deprive of citizenship any American who should reside abroad two years, unless he made declaration, during that period, before a minister or consul of the United States, of his intention to return. This bill was obviously suggested by the two-years' clause of the Bancroft treaties. But there is a wide difference between a naturalized citizen of the United States who returns to his native country and lives there two years, and a native American who passes two years abroad in study or travel; and the legislator has no right to presume that the intention to return is equally absent in both cases. It is to be hoped that this crude proposition will not be revived. Such a solution of the question is objectionable from the international as well as the national standpoint. No country in the world makes the foreign-born resident a citizen by virtue of two years' residence. Such a bill as that described would therefore create *heimathlose*—men without a country. The true solution, from the international standpoint, is to attach the result of expatriation to all acts, and to those acts only, by which the American citizen gains a new nationality. Such acts are the acquisition of a foreign naturalization and the marriage of an American woman to a foreigner.

Further, in case of double nationality existing from birth, Congress should provide for a renunciation of American citizenship. Such a double nationality exists—

1. In the case of the children of alien parents born within the jurisdiction of the United States.

2. In the case of children of American parents born abroad, when the State in whose territory they are born regards them as its citizens.

In both classes of cases the English Act of 1870 provides for a "declaration of alienage" to be made by the *sujet mixte* on reaching majority.

VOTING HABITS, PAST AND PRESENT.

An immense amount of matter has been published in partisan newspapers of late years about the ratio of votes cast in Presidential elections to possible voters in different parts of the Union. The bulk of it has been absolutely worthless stuff, since it was only a reckless juggling with figures to make them sustain certain theories. The most common way has been to declare that the returns from certain Southern States in 1880 and 1884 showed that Republicans were generally kept from voting, and that the elections were consequently unfair, because the proportion of votes to adult males reported by the census was very small, while in certain selected Northern States it was very large. This left quite out of view the fact that in these Northern States there had been a close contest between the two parties, which naturally brought voters generally to the polls, while in the Southern States cited the Republicans had made no real fight, and as a result many of the other party did not take the trouble to cast their ballots—precisely as has happened more than once, *mutatis mutandis*, at the North.

The public is naturally weary of such profitless twisting of election returns and census figures. But there is a broad and inviting field for inquiry in the rather dreary-looking wastes of political almanacs and census reports, which has never been cultivated. Do men nowadays vote as generally as their fathers did? What effect has the infusion during the past generation of a vast foreign element produced upon our voting habits? Has the average citizen become more or less conscientious about discharging the first duty of citizenship? How has the wonderful growth of the nation affected the operation of that basic principle upon which it was established? These are questions which must often suggest themselves to any thoughtful observer of this great experiment in self-government. Fortunately, it is possible to answer them with scientific accuracy, and, more fortunately still, the answers are in the highest degree reassuring.

Once in twenty years the national census has been taken in the same year that a President was elected, and thus a basis has been furnished for determining the ratio of votes to voting population. In 1800 and again in 1820 there was no popular vote in many of the States, Presidential electors being chosen by the legislatures, but by 1840 all of the States except South Carolina had adopted the system of a popular election. There are therefore three Presidential contests, covering a period of forty years, as to which diligent scrutiny will reveal the percentage of men in each State who went to the polls. The revolution in the suffrage qualifications in the old slave States since the ante-bellum period excludes them from consideration, while several large States in the West were still Territories in 1840. But New England, the Middle States except Delaware, and Ohio, Indiana, and Illinois in the West, make a round dozen of States which furnish a fair basis for comparison, containing as they do nearly half the whole population of the country.

To discover how large a proportion of men voted in each contest, one must first find the number of males above the age of twenty-one reported by the census, in any State, then get the total vote of the State from a political almanac, and divide the latter by the former. When a preliminary State election called out a larger vote than was cast for President later in the year, as, for example, in Pennsylvania in October, 1860, and in Maine in September, 1880, the vote for State officers is to be taken. The following table shows the number out of every thousand males above the age of twenty-one who voted in each State at the three elections:

	1840	1860	1880
Maine	832	763	789
New Hampshire	874	808	821
Vermont	751	575	729
Massachusetts	663	517	562
Rhode Island	338	516	380
Connecticut	766	714	749
New York	780	682	785
New Jersey	813	752	818
Pennsylvania	784	732	799
Ohio	854	823	877
Indiana	867	903	944
Illinois	857	806	781

The first thing which strikes the eye is the uniformity with which the ratio of voters fell off between 1840 and 1860, despite the fact that the struggle which ended in Lincoln's election was as exciting as that which placed Harrison for a month in the White House. Rhode Island is the solitary exception to the rule in the East, and the change in that State was due to special local causes—for one thing, the abolition soon after the election in 1840 of the old property qualification of a $134 freehold, so far as native-born citizens were concerned; and for another, the hot fight which brought Sprague to the front in 1860. Indiana is the only other State which gained, and this is easily explicable on the ground that it was already by that time coming to be recognized as one of the close "pivotal States," upon which the managers of both parties concentrated their efforts.

Local reasons might account for a smaller proportional vote in some cases. It is easy,

for example, to see why Vermont voters may have felt more interest in the election of 1840, when the Democrats of the State had been able to make a good showing in 1836, than in 1860, when the political sentiment had become overwhelmingly Republican. But there must have been some general cause to produce so general a result. That cause was undoubtedly the great tide of foreign immigration which set in during this period, and which repeatedly landed on our shores in a single year more than half as many people as had come during the whole decade between 1830 and 1840. A considerable percentage of these newcomers were very slow about becoming naturalized, and consequently were disqualified from voting in 1860. The census of 1840 did not show the nativity of our population, but the best authorities place the whole number of foreign-born inhabitants in the country that year at only 860,000, while by 1860 it had mounted to 4,138,697. The unnaturalized element was consequently but trifling in 1840 as compared with 1860. The proportion of foreign-born to every thousand people in each of the States in 1860 and 1880 was as follows:

	1860	1880
Maine	59	91
New Hampshire	64	133
Vermont	104	123
Massachusetts	211	249
Rhode Island	214	268
Connecticut	175	209
New York	258	298
New Jersey	183	196
Pennsylvania	148	137
Ohio	140	123
Indiana	88	73
Illinois	189	189

It will be seen that the falling off in the vote between 1840 and 1860 is usually most marked in the States where the foreigners settled in largest numbers, as New York and Massachusetts; the educational test and the poll-tax in the latter State being especially serious obstacles in their way to the ballot-box. The phenomenal smallness of the foreign element in Indiana, while immigrants not only settled in large numbers in Ohio but pressed past her in still larger numbers into Illinois—an anomaly which continues to the present day—was one thing which rendered it possible for her to gain in fulness of vote while her next neighbors on both sides lost.

It is worth noting here, by the way, that the reason why the Western States cast a larger proportional vote than the Eastern ones, especially in the earliest contest, is to be found in the census statistics of age. The new States were, of course, chiefly settled by vigorous men in the prime of life, many of whom came from New England, while the weak, the old, and the infirm seldom became pioneers. Of two communities, other things being equal, the larger vote will be cast by the one which has the greater proportion of active men—that is to say, men who are between twenty-one and fifty years of age. Compare Vermont, the greatest colonizing State of the Union, with Illinois, and it will be found that in the New England State only 74 per cent. of the adult males in 1840 were between twenty-one and fifty, and that 6 per cent. had passed the age of seventy, while in Illinois 87 per cent. of all were between twenty-one and fifty, and only a trifle over 1 per cent. had reached seventy. As New Englanders continue to emigrate to the West, the same principle still holds, though with diminished force as the nearer Western States themselves grow old.

The most striking lesson of these tables is found by comparing the figures for 1860 and 1880. We have seen that the proportion of men who voted sank almost everywhere between 1840 and 1860, the average falling off in the dozen States being from 791 to 732 per 1,000. We have seen that this falling off coincided with and was largely due to the element of immigration, the number of foreigners having risen from a trifling percentage in 1840 to an average of 175 out of every 1,000 people in these States in 1860. The first effect of immigration was thus to diminish the proportion of men who participated in the government of the country. Immigrants continued to pour in upon us in still larger floods after 1860. Despite the growth of native population, foreigners came in such numbers that the census of 1880 showed a greater percentage of foreign-born in most of these States than in their smaller populations of twenty years before, and the average proportion of foreigners to all the people in the whole dozen States was almost identical in the two eras—175 out of 1,000 in 1860 and 173 out of 1,000 in 1880. Moreover, there had grown up to their majority during this period hundreds of thousands of men who were the children of such immigrants, so that the percentage of adult males who were either born abroad themselves, or were the sons of foreign-born parents, was far larger in 1880 than in 1860.

But while the ratio of foreign-born has held constant, and the element which was purely native in descent has markedly decreased, the first table given above shows that the vote was relatively fuller in 1880 than in 1860 for every State but two—Illinois and Rhode Island. The falling off in Illinois was small, and is readily accounted for when one reflects that in 1860 the State was a hotly contested battle-ground between the followers of Lincoln and Douglass, while in 1880 it was certain from the opening of the campaign that it would go for Garfield. The larger falling off in Rhode Island is also due in part to the fact that her politics had become so one-sided that the Republicans no longer have a close fight, while the retention of the property qualification for the foreign-born keeps a larger number from voting as the proportion of foreigners increases. Rhode Island and Illinois aside, every State has gained, and some of them remarkably, as New York from 682 to 785 votes per 1,000. For the whole number the ratio has risen from 732 to 789 per 1,000. After twenty years, during which the infusion of the foreign strain in our national blood became decidedly stronger, the proportion of men who discharged the prime duty of citizenship became sensibly larger.

Nor is this all. Not only have we made a distinct gain upon 1860, but we have practically regained the position held in 1840. In truth, if Massachusetts, with her poll-tax and educational test, and Rhode Island, with her property qualification, be left out of the account, we have improved upon 1840. For the twelve States the proportion of voters was 791 in 1840, and 789 in 1880, while with Massachusetts and Rhode Island out, the figures for the rest are 809 in 1840, and 816 in 1880. During the five years before the last census was taken, more than a million and a quarter of foreigners entered the country, who were debarred from naturalization before the succeeding Presidential election by the five-year clause of the law, while in 1840 this element was very small. In other words, of the men who had the right to vote, a decidedly larger percentage went to the polls in 1880 than in 1840. This result, moreover, was brought about, not only in the face of a vast foreign immigration, but also in spite of the fact that the election of 1840 was a much more exciting affair in most of the States than that of 1880. In Pennsylvania, for example, then an "October State," for whose verdict the whole country waited, it was "nip and tuck" between the Whigs and the Democrats from the start in 1840, and Harrison only won by 349 votes in more than 288,000, while in 1880 it was a foregone conclusion that Garfield would carry the State; yet 799 Pennsylvanians went to the polls in 1880 for every 784 in 1840. In like manner, Vermont, although for a quarter of a century it had always gone Republican by two or three to one, turned out to the polls almost as generally in 1880 as when the Democrats made a respectable sort of fight in 1840, and this, too, despite a considerable incoming meanwhile of French Canadians and other foreigners who do not become naturalized. Such facts as these show that the common impression that the men of to-day are less conscientious about voting than the men of the last generation is a misconception. On the contrary, as the country grows older and its larger population becomes more diversified in its character, the American citizen is more faithful to the prime duty of citizenship than when our population was only a third as numerous and was remarkably homogeneous in its nature. No more significant revelation as to the tendencies of our governmental system could be made.

SALISBURY GLADSTONE, AND PARNELL.

THE political situation in England is now clearly defined, and it leaves the Tories and Parnellites together in a majority of two over the Liberals. A more correct way of putting it would be, however, to say that it leaves the Liberals three short of a majority over the Tories and Parnellites combined. The Tories have no chance of any steady support from the Parnellites, without purchasing it by concessions which would cause the disappearance of the latter from the House of Commons altogether.

But even if Salisbury were sure of their support, they do not give him a working majority. A minister needs not only two votes to spare, but about fifty to give him proper control of the House of Commons. This used to be the rule when parties were far better disciplined than they are now. There has to be margin enough in favor of the Government to provide for absences from sickness, laziness, business engagements, and personal discontent, as well as for positive desertion on political grounds. In the coming House, with its large body of new members—nearly one half—and its numerous small cross currents of feeling and opinion, this margin will doubtless have to be larger. So that, although it is open to Salisbury to treat the failure of the Liberals to get a clear majority as a reason for not resigning before the House meets, according to

the practice of late years, it is not open to him to undertake to carry on the Government without some assurance of support from Parnell, or without some arrangement with the Liberals which will enable him to dispense with Parnell's support.

In like manner Mr. Gladstone cannot undertake to carry on the Government without coming to terms either with Parnell or with some section of the Tories. But of the two Gladstone is in much the better position, because his own English, Scotch, and Welsh force is quite sufficient, if he can get Parnell out of the way, to carry on the Government, while if Salisbury were to get Parnell out of the way, he would be nowhere. He is, in short, truly between the devil and the deep sea. The chance of winning over enough Whigs to get him out of his scrape is said to be very small. Twenty at the outside is the number spoken of as at all likely at this crisis, when the country is apparently going Radical with a rush, to risk their political future by going over to the Tories.

The first business before both sides, therefore, as everybody now recognizes, is to settle with Parnell. Until this is done, Parliamentary government in England is paralyzed in a way for which there is no cure but the revolutionary expulsion of his followers from the House. Parnell's estimate of the force with which he would appear in the new Parliament has proved strictly correct. He said he should have eighty-five members from Ireland. He has this exactly, plus one from England by the capture by an Irishman of an English constituency. He has expelled the Liberals from every Irish seat, and has carried every seat in the island, except seventeen, these being in Ulster, and he has carried nearly half the Ulster seats. For the first time since the Union, and, in fact, for the first time in the history of the country, the Irish people are fully represented in the Legislature. Parnell can, therefore, speak for them with an authority which no other man has ever had. He has been taunted a good deal hitherto with refusing to produce a plan for the settlement of the Irish question, but he has refused to do so on the very good ground that any plan he produced would have been received with shouts of abuse and ridicule, which would have been justified on two grounds—one, that it was wildly impracticable; the other, that he was not properly authorized to negotiate it. Both these difficulties have probably now disappeared. His terms will be seriously discussed, whether objectionable or not, and he will be treated as the authorized agent of Ireland in the negotiations.

Probably neither Gladstone nor Salisbury will wish to say anything until they hear from him, and neither will wish to offer anything until he knows what the other will offer. Their bargaining powers will be put to a very severe test. Each will shrink from having it said on the English stump that he gave Parnell better terms than his opponent would have done, or better than Parnell would, with longer delay, have accepted. But their attitude respectively toward Parnell will really be very different, and Parnell is too shrewd not to know it. Salisbury and all his immediate followers hate the Irish and wish they were sunk in the sea, and sympathize keenly with the landlords, whom they look on as victims of spoliation. They never, if they could have helped it, would have made the tenants the slightest concession, and would not concede home rule to Parnell if its concession did not seem necessary to the retention of power, and power is to them now, to a greater degree than ever before in the history of the party, money. In fact, to put the matter plainly, they and their friends are very hard up—for they, or their fathers and brothers, belong mainly to the impoverished landed interest—and the salaries of the offices are very important to them. If they let go there is no knowing when they will ever touch public money again.

Gladstone and the Liberals, on the other hand, though they blundered egregiously in their treatment of the Land League agitation, have a real sympathy with the Irish people, and Gladstone has undoubtedly a strong ambition to settle the Irish question forever before he quits the stage. Parnell certainly knows this very well also, and is doubtless desirous to live on friendly terms with the rising English democracy. Doubtless, too, he feels that his triumph to-day is a sufficient punishment for the brutality of Forster and the too great goodness and purity of Earl Spencer, and that he can now afford to be magnanimous. There is, therefore, a much better chance of his making terms with Gladstone than with Salisbury.

In considering what those terms will be, we may remark that nearly all the published objections of the Liberals to a local legislature in Ireland have been drawn from the probability that such a legislature would abuse its powers or seek to transcend them. We have seen very little said, except by half-crazed anti-Irish zealots, against giving an Irish legislature such powers as are exercised by that of an American State, if it were sure to claim no others, and to refrain from using these in a spirit hostile to the imperial Government, so that we should not be surprised to hear that Parnell's main or only difficulty, in the long run, lay in satisfying the British public that he was not aiming at the establishment of machinery for the humiliation and confusion of England. This difficulty it will probably be every year now easier for him to overcome, owing to the improvement in the temper of both sides.

RENAN'S NEW DRAMA.—II.

PARIS, November 28, 1885.

I SAID that I would return to the "Prêtre de Némi," and chiefly to the Preface which Renan has found it necessary to write for his "philosophical drama." I read the drama first, as I wished to form an opinion directly, and I confess that it left a painful impression. It seemed to me to have what the French call an *arrière-goût*, which was far from agreeable. The conversations recalled to me the Greek sophists, the enemies of Socrates, ready to defend any opinion and playing with ideas and with words. The priest, the prophet of the soul, Antistius, seemed impossible. I do not speak of the local color, for Renan has not even attempted to paint Alba Longa and Albans; he has shown us types—the reformer, the aristocrat, the patriot, the liberal, the believer, the sceptic, the sensualist, the cynic, the coward. Such types are found and will always be found in every country, in every age. But what did he mean, after all, by writing this drama? The conclusion you would naturally draw from it is a profound contempt and indifference. The world, as it is shown in Alba, looks like a pantomime, a farce; it is a curious spectacle, and nothing else. The wise man is the man who stands quietly looking on, and is amused by men as an artist would be by the transformations of clouds and the changes of color. It is the old doctrine of Lucretius and of Epicurus:

"Suave mari magno turbantibus æquora magnis," etc.

Progress! What is progress? Everything is ever changing. Reform! The reformer is misunderstood; you cannot pour new ideas into minds which are not prepared to receive them. The reformer does more harm than good; after vain attempts he himself sees that he is becoming obnoxious, and that he must disappear. He acts like a false note in a concert. Humanity moves on like a millstone, crushing everything under its weight and stupidity. When the Priest of Némi dies everybody is satisfied, and he is satisfied himself; he goes willingly out of a world which he tried to change but could not:

"Je sortirai pour ma part satisfait
D'un monde où l'action n'est pas la sœur du rêve."

These verses, which I believe are Baudelaire's, the unfortunate author of 'Les Fleurs du Mal,' might be placed in the mouth of Antistus.

Let us see how M. Renan corrects the impression which is left by his drama, and how he explains the object he had in view:

"I have attempted in this work to develop an idea similar to the Hebrew Messianism—that is to say, the definitive triumph of religious and moral progress, notwithstanding the repeated victories of folly and of evil. I have tried to show the good cause gaining ground, notwithstanding the bitternesses, the disgraces, the weaknesses even, and the faults of its apostles and its martyrs. I wished to make evident (by injecting them, as they do in anatomical preparations) a network of truths all tending to the iron law which will have it that in politics crime is often recompensed and virtue generally punished. The picture is necessarily a sad one, as the foreground is occupied by the egoism of the great, the folly of the people, the impotence of the intelligent, the infamy of a lying priesthood, the weakness of the liberal priesthood, the easy deceptions of patriotism, the illusions of liberalism, the incurable baseness of the wicked. I believe the work to be healthy nevertheless, for one learns from it not to be too much moved by the unstable equilibrium of humanity, on seeing the good and the true emerge, after all, from the hideous pool where screams and rots all that is inert, coarse, and impure."

M. Renan admits that his new drama is but a continuation of his 'Philosophical Dialogues.' These dialogues, it must be confessed, did not find favor with the public, though Renan considers the dialogue the best form for a philosophical exposition, as philosophical truths are not like geometrical truths, and must ever be the subject and the occasion of debate. You cannot put Euclid, Gauss, or Cauchy in the form of a dialogue; but philosophy will ever be a sort of dialogue between two systems which are not susceptible of an absolute demonstration. But—

"I found," says Renan, "that the form of the dialogue is not sufficient; we must have some sort of action. A free drama, without local coloring, after the fashion of Shakespeare, will allow the rendering of much more delicate shades. . . . 'Coriolanus' and 'Julius Cæsar' are not pictures of Roman manners; they are studies of absolute psychology. I tried, without any scenic intention, naturally, to do something similar. My dear master and friend, Baron d'Eckstein, had written a drama, the subject of which he never told me, which began before the beginning of the world, by a conversation between the Father and the Son in the presence of the Holy Spirit."

This beats the "Avocat, passons au déluge" of Racine's "Plaideurs." Renan took his fable from Strabo, who tells how in the Temple of Diana, on Lake Nemi, the priest, in order to have a legitimate authority, was bound to kill his predecessor with his own hand. He imagined a priest of Némi who wished to abolish this old custom, as well as all human sacrifices, and this

priest, Antistius, became the type of the reformer who preaches in the desert and cannot be understood.

There is perhaps not much modesty in the manner in which Renan speaks of writing dramas "after the fashion of Shakspere." But this has evidently become a fixed idea with him, for the "Prêtre de Némi" is not his first philosophical drama. He has given us before "Caliban" and the "Eau de Jouvence," meant to be a sequel to the "Tempest." Renan's quality of mind is very remarkable: nothing can exceed the pliability, the elasticity of his intellect. His style has sometimes a delicacy, sometimes an eloquence, which cannot be equalled; but he is not a creator of types, he has not the poetical imagination which can make a new world. His heroes, his heroines are but abstractions: they have no real life, they are too conscious, they are wanting in naïveté. There is more creative power in a page of Victor Hugo than in the three philosophical dramas of Renan, and there is less in the "Prêtre de Némi" than in the first two, "Caliban" and the "Eau de Jouvence."

I hope I shall not be deemed too severe if I say that there is also in the "Prêtre de Némi" a certain lassitude and almost dulness; the style is less brilliant; it becomes in some places heavy and commonplace. "Aliquando dormitat Homerus." The priest Antistius, who means to change a religion, ought to be a little of an enthusiast; he is helpless, discouraged, he has no faith. Can you imagine the *reformer* saying quietly to himself, "I see that man needs narrow thoughts"; or, "The vulgarity of man makes of moral solitude a necessity for whoever rises above the multitude by genius or by heart"? Antistius has no sympathy; he asks, "Would it not be better to abandon men to the errors which they like?" He answers, it is true, "No, there is such a thing as reason, and reason does not exist without man. The friend of man must love humanity, since reason is only realized in humanity"; and, "Numberless smiles of the sea; you are nothing to the waves of dreams which humanity will go through before it arrives at something which resembles reason."

Antistius, who loves only reason, is insensible to love. The sibyl Carmenta bids him in vain, "Tell the sibyl to be a woman like any other woman; order her to become a mother. Let me bind a few flowers to my bosom, and crimp my hair. . . . Shall we alone be exempted from the law of love?" Antistius answers coolly that the sibyl must remain a virgin. She is bound by a vow, and "a vow made to the country, to honor, to duty, is always valid. . . . The gods to whom you made your vows perhaps do not exist, but the divine exists; you belong to it." This is the style of Antistius, and we can only hope that Carmenta, the sibyl, understood the difference between the gods and the godly. Poor Carmenta! Renan tells her: "Your beauty might have inspired love. *Tant pis!* You will die without having inspired any other sentiment but terror."

Carmenta wonders why the priest who preaches new truths, who is truthful himself, forces her, the sibyl, to lie when she speaks to the people; and it must be confessed that the answer of the priest is extremely sophistical and unsatisfactory. Antistius allows Carmenta to love him, since woman will never be able to do good but for "the love of a man." He even kisses her on the forehead, and says, "My sister in duty and martyrdom, I love you." But Carmenta must remain a sibyl, and she says: "Your sibyl will never have off her black gown. . . . Sisters dressed in black, whom I augur in the future, when people shall come and, in the name of reason, lift your veil, refuse to be free, keep faithfully your vow of death. Woe to those who are converted to vulgar common sense after having tasted divine folly!"

This perpetual antinomy between vulgar common sense and what Renan calls divine folly is found all through the new drama. Truth is made absurd and common sense stupid. Renan answers beforehand in his preface the criticisms which may be made against his "Prêtre de Nemi." He defends himself against those who would attribute to him the ideas which are placed in the mouth of some of the actors; but if all religious or even philosophical faith is shaken, if nothing remains in the intellectual world but doubt, we hardly see why Antistius should ever, like a phenix, revive. "Antistius will," says Renan, "perpetually revive and perpetually fail, and, in the end, it will be found that the totality of his defeats will be worth a victory." He ends with these fervid words:

"In the great crisis which the triumph of positivism has produced in our time in moral truths, I have defended more than I have diminished the part of the ideal. I have not been among the timid spirits who think that truth needs shade, and that the humite fears the free air. I have criticised everything, and whatever people may say, I have maintained everything. . . . Our criticism has done more for the conservation of religion than all the apologists. We have found for God a rich collection of synonyms."

In the social order, Renan has asked himself the question:

"Who knows if truth is not sad? The edifice of human society reposes on a great vacuum. We have dared to say so. Nothing is more dangerous than to skate on thin ice without knowing that it is thin. I have never believed, in any order of thought, that it was bad to see too well. All truth is good to know, for all truth well known makes man strong and prudent, two things equally necessary to those whom their duty, an imprudent ambition, or their evil destiny, has called to occupy themselves with the affairs of this poor humanity."

Correspondence.

THE IGNORING OF THE MORAVIAN MISSIONS.

To the Editor of The Nation:

Sir: In your review of the 'History of the Moravian Church,' by Bishop de Schweinitz (*Nation*, No. 1066), the comparative silence of our historians about the labors of the Moravians in America is explained by the remark that their "activity was not conspicuous in the political field as was that of the Puritans of New England and the Presbyterians of New Jersey." This is true and to the purpose, although individuals, like Christian Frederick Post, and, indirectly, the missionaries as a body, were of much service to the English colonies. But another fact seems to have some bearing on the matter, namely, the silence of contemporary religious writers. Thus, in the 'Plain and Faithful Narrative' which Eleazar Wheelock, one of the best friends of the Indians during the colonial period, published in successive numbers, as a kind of bulletin, between 1763 and 1775, there is a manifest effort to avoid speaking of the United Brethren. In 1772 David McLure and Levi Frisbie, Wheelock's pupils, undertook a mission to the Delawares in Ohio. They failed chiefly because the Moravians, with a considerable body of converts from their Eastern missions, were then establishing themselves by invitation in the Delaware territories. The New Englanders saw both the missionaries and their disciples, and must have known why they were themselves politely dismissed. But the 'Narrative' does not make the most distant allusion to the Brethren, and mentions, without trying to account for, the singular disposition of certain Indians to live like white farmers. The cause of this reticence was undoubtedly the general distrust then felt of Moravian teaching and methods—a distrust which lingered long after it had become plain that these foreigners were neither Frenchmen nor Jesuits. It survived, too, the irresistible proofs supplied for years in western Connecticut, that they were doing the Indians a great deal of good. Both the religious parties in New England, the Old Lights and the New Lights, regarded the Brethren as unsafe spiritual guides; and, being unable to speak evil of a good work, they commonly said nothing. When McLure published long afterwards a life of his teacher, prejudice had subsided, and he bestowed high praise on the Moravians.

After giving this example of one result of the *odium theologicum*, I may be allowed to emphasize the fact that very excellent work was done among the Indians by both Old Light and New Light missionaries. And it was done in virtue of something which they possessed in common with the Moravians—the essential spirit of Christianity, unselfish love to God and man.

Guilford, Conn., December 7, 1885.

CONSUMPTION AMONG THE FOREIGN-BORN.

To the Editor of The Nation:

Sir: In the editorial entitled "Prolonging Human Life," in your issue of December 3, Massachusetts statistics are used to show the diminution in the death-rate from consumption from 1857 to the present time—a diminution which is very striking, and was dwelt upon by me in a paper read before the American Climatological Society at its meeting in New York last spring. When speaking of the causes of this diminution, you fall, as I believe, into grave error in asserting that "a portion of this decrease may fairly be ascribed to the infusion in the population of a large foreign element less subject to consumption than the native."

In 1870 the foreign-born population of Boston formed 35.12 per cent. of the whole inhabitants, whereas, of all the deaths caused by phthisis in the city during ten years, 1864-73, 51.37 per cent. took place among the foreign-born. Next, 64.65 per cent. of the foreign-born were Irish, but of the foreign decedents by phthisis during ten years, 75.08 per cent. were Irish. This special liability to phthisis of the Irish, who in Boston and the State generally alike are decidedly more numerous than the foreign-born of all other nationalities combined, is fully borne out by other statistics, as can be seen in the following table:

1870.	Irish Percentage of Foreign Population.	Irish Percentage of all Foreign Decedents from Consumption.
Boston.....	64.65	75.08
New York.....	48.02	63.03
United States....	33.3	47.08

It must, again, be remembered that as "native-born" are classed all children born of Irish or other foreign parentage, and the well-known predisposing influence of heredity in phthisis must be kept in mind. It seems to me that these figures, which could under other circumstances be further developed with interest and profit, show beyond doubt that the decrease in the death-rate from phthisis in Massachusetts has taken place *in spite* of the infusion in the population of a large foreign element *more* subject to consumption than the native. It is my belief that the decrease is mainly attributable to the prevention of phthisis by improved hygiene, especially among the native-born, but that some of it must be credited to more frequent arrest and cure of the actually developed disease through early diagnosis and more rational treatment.—Yours very truly, Fred'k C. Shattuck, M.D.

Boston, December 7, 1885.

TO THE EDITOR OF THE NATION:

SIR: In your valuable article of December 3 on "Prolonging Human Life," it is stated that in Massachusetts for the past twenty-five years there has been a marked decrease in the number of deaths from consumption. This sentence follows: "A portion of this decrease may fairly be ascribed to the infusion in the population of a large foreign element less subject to consumption than the native." In Massachusetts the chief immigration is from Ireland. In one seaport town which has an unusually large Irish colony the annual number of deaths from consumption among them is startling in itself, and far greater than among the natives; their knowledge and practice of the laws of hygiene being naturally limited. This fact decidedly strengthens your main argument.—Very respectfully,

M. G. M.

CAMBRIDGE, MASS., December 11, 1885.

SHORT O AND SHORT A.

TO THE EDITOR OF THE NATION:

SIR: I was much interested to see in your examples of phonetic English spelling, taken from Mr. Sweet's work, the pronunciation of ă and ŏ. The short o and short a are completely confounded by the youth of Southern Ohio. Color is pronounced călăr, done dane, some same, etc. In the pronunciation of Greek this practice works some confusion, the penultimate vowels of τιμάω and δηλόω being pronounced exactly alike. More than this, the ear seems unable to distinguish between the spoken sounds of omicron and short alpha, a failing which is continually made apparent in correcting orally Greek prose exercises. I am inclined to think that the ŏ sound is gradually disappearing in this part of the country, as hot is pronounced like hat, and not the reverse. The usage, however, seems limited to those whose childhood has been passed in this section, and of course there are exceptions among careful speakers. In New England I think omicron is sounded, for the sake of convenience, like o in not, and short a like a in hat; but it is very difficult, almost impossible, to get the former sound here. I do not know to what extent the pronunciation prevails elsewhere. W. A. M.

COLLEGE HILL, OHIO, December 7, 1885.

MRS. THAYER'S WILD FLOWERS OF COLORADO.

TO THE EDITOR OF THE NATION:

SIR: We ask for space in your columns to answer an unwarranted attack made upon a lady, Mrs. Emma Homan Thayer, whose book, 'The Wild Flowers of Colorado,' we have the honor to publish.

We not only have the word of Mrs. Thayer, which we are perfectly satisfied to accept, but that of eye-witnesses, that the illustrations in her book are, as the title-page announces, "from original water-color sketches drawn from nature." The claim of Miss Alice H. Stewart's friends that Mrs. Thayer's studies were made from sketches by Miss Stewart we believe to be as false as the claim of several authoresses unknown to fame to the authorship of the Saxe-Holme Stories. There seems to be a strange mania among a certain class of persons which takes the form of a claim upon the successful work of others.

We beg to append a letter received by us from Kate Ball McClure, of Denver, which bears the same testimony as several others in our possession:

"In the *Nation* of the 29th of October, I saw a letter signed 'L. J. S.' I wish, in the fewest words possible, to correct what must be a very great mistake. I accompanied the authoress of 'Wild Flowers of Colorado,' Emma Homan Thayer, on her trips over the mountains, and saw her paint the flowers so faithfully represented in her book. They are not only correctly drawn, but are perfect pictures of the wild flowers of our State. Having painted for years and given the flora of Colorado special study, I feel it only justice to Mrs. Thayer to write this letter."

CASSELL & COMPANY, Limited.

739 AND 741 BROADWAY,
NEW YORK, December 3, 1885.

[We have received a similar letter from another companion of Mrs. Thayer on the same excursion, who says: "To my *personal* knowledge Mrs. Thayer did sketch and paint from nature most of the flowers produced in that book, and such of them as I cannot speak of thus positively Miss Stewart does not claim."—ED. NATION.]

CORNELL CONGRESS.

TO THE EDITOR OF THE NATION:

SIR: In your edition of November 26 you published a letter describing the "Students' House of Commons" at Johns Hopkins University. A society similar in purpose, but entirely different in organization, was established last year at Cornell University and continues in successful operation. A complete Senate and House of Representatives were organized. The membership of the former was limited to eighteen, and of the latter to fifty-four. All students are eligible to the House; Juniors, Seniors, and graduates to the Senate. The House does the work of State Legislatures in electing the Senators. In both branches members are assigned to different States and districts according to politics. To facilitate discussion and keep up party spirit, no one party is allowed to have a majority of all the members.

As far as possible, the methods of the national Congress are followed. The Senate and House rules govern practice, and bills are referred to the usual committees and discussed by them. Attendance in the House this year has varied from about thirty-five to forty-five. A senior member of the Faculty consented to accept a position relative to the Congress corresponding to that held in the national Government by the President of the United States, and at the beginning of the "session" wrote an able message, dealing with questions of civil service, tariff reform, currency, Indian policy, etc., and especially recommending the establishment of a great national university.

The object of the mock Congress, as stated at its organization, is "to discuss current and national topics, and to acquire a knowledge of the Constitution and practice in parliamentary law." As an example of the subjects considered may be cited bills for the suspension of silver coinage, for the issue of silver certificates, and for the distribution of surplus revenue among the States. Especially interesting has been the debate upon a proposed Constitutional amendment prohibiting the manufacture and sale of intoxicating liquors. In the discussion the purpose has been not so much to train parliamentarians and possible future Congressmen as to enable the members to understand current politics, and to follow intelligently the course of legislation. The plan adopted here seems much better than that followed at Johns Hopkins, as it promotes a knowledge of the machinery of our own Government, and further does not involve the evident inconsistency of debating questions relating to American society and institutions in a body modelled after the British House of Commons.

F.

ITHACA, N. Y., December 5, 1885.

THE "MYSTERY" OF THE ENGLISH ELECTIONS.

TO THE EDITOR OF THE NATION:

SIR: The elections in England are sufficiently interesting in their bearing on the future of that country, but they have, apart from that, a very special lesson for us. In your last number you refer to them in refutation of the theory of the Jefferson Democrats (though I do not see why they should be credited with a monopoly of it as against the Republicans of recent years), that the Civil-Service-Reform Act is wrong because, in the absence of offices to distribute among the party workers, the interest of the American people in politics will rapidly die out, and it will finally be difficult to get them to vote, not to speak of taking the trouble to canvass either in public or in private. You then say that in England, notwithstanding only a few of the very highest offices are in question, and notwithstanding the severest laws, most stringently executed, against the use of money, bribery, or undue influence in elections, there never was an electoral conflict carried on with greater heat than the present one. And you conclude:

"Now, what is the meaning of the enormous vote which is being polled in England, and the intense excitement which is being displayed under the most discouraging circumstances? Why do the workers work, and the candidates run, and the orators orate, and the rioters riot, and the voters vote, and the committees hire the halls, and the people crowd them, when there is neither money nor office in the contest?"

The answer to these questions seems to me perfectly simple and clear, and that without invalidating the above theory, which, in the present state of our politics, it is to be feared, is unfortunately but too correct. To state definitely the Q. E. D.: the political methods in England are such as to arouse the interest and enthusiasm of the people, while in this country they are not. In the first place, the Liberal and Conservative parties are distinctly divided. No doubt the Conservative of to-day would have been called a Radical fifty years ago, and on different questions the line is drawn with varying degrees of sharpness; but still it is well understood that the Liberals are for pushing forward and the Conservatives for holding back. This distinction is maintained in Parliament, the party attitude on every question being kept up and intensified by public debate. But the crowning difference is in the identification of principles with persons. The mass of the people have very hazy ideas about free trade, local government, Parliamentary procedure, or even the land question, but they know that Mr. Gladstone and his lieutenants represent certain general views of these questions, and that it will rest with his Ministry to shape the details. Mr. Gladstone is for them the concrete embodiment of certain ends which they desire, and his personal qualities come in as a powerful reinforcement. The bitter personal hatred of Mr. Gladstone in London society is nothing more than an expression of fear of the hold which he has upon the nameless millions. The weakness of the Tories is less in their principles than in the fact that they have no champion to match with him.

This personal influence may be a good or bad thing, but it is the secret of the excitement of the English elections, and it is the only way, except actual fighting, in which masses of men can be roused to put forth their strength. This is one-man power, it is true, but it is so only because the people believe that he is devoted to their interests. If the fiercest opposition could fasten on him a suspicion that he was pursuing his own interest as against theirs, he would lose his power in a moment. Only the master of a standing army can maintain a position like that.

The power is in the will of the people, and there is no country in the world where the will of the people finds expression as it does in Great Britain to day.

In this country the only real dividing line between the parties as such is the possession of office. There is not a single question of which it can be said to be distinctively Democratic or Republican, and on every one the dividing line among the people would be differently drawn. The House is Democratic and the Senate Republican, but what meaning has the distinction except in its relation to the Executive? The committees which manage everything are made up of both parties, and settle questions upon motives of which the country knows nothing, but strongly suspects to consist in political trading. What debate there is has absolutely no meaning. The element of personality is totally wanting. There is nobody who in the public mind represents anything. President Cleveland stands, indeed, at the moment, for civil-service reform, but not as a principle, and only because the Constitution gives him the power of appointment to office; and not as a party leader, for it is safe to say that both parties in Congress are against him. It is simply a question of his individual stubbornness. There is something pathetic in the idea of this single and necessarily silent man, fighting like Horatius upon the Tiber bridge, and without a single voice raised in effective support. And civil-service reform is, after all, a mere administrative detail. It was settled in England, once for all, thirty years ago, and no one ever thinks of raising it. But on all political questions—tariff, silver, navy, currency, Indians, etc.—the President and his Cabinet have little more power in determining policy than any average citizen.

The country knew perfectly well, in the election last autumn, that it was not promoting a settlement of any of them. The campaign turned upon the moral character of the candidates—a thing which in England hardly comes into question at all. It was mortifying, but it was only another illustration how a widely extended suffrage will have personality for its object, with political questions if it can, without them if it cannot. If we expect to substitute political enthusiasm for office-seeking as a motive power, we shall have to adopt some method of tying politics to personality.

Political leadership is what the country needs, and the solution of that problem is to be found in two words only—Cabinet responsibility.

G. B.

Boston, December 7, 1885.

VENICE IN SUMMER.

To the Editor of The Nation:

Sir: Alluding to your interesting paragraph about Venice in summer, in last week's issue, let me ask you not to leave your readers in the mistaken opinion that they must choose between the canals (whose condition may not be as bad as you seem to think) and the flat, shelving Adriatic beach. Those who want a swim, as distinguished from a dip, go to the swimming bath which is moored off shore in the harbor, the Canale di San Marco. The spot was formerly between the Molo and San Giorgio Maggiore, and afterward was between the Dogana and San Giorgio; perhaps it will be in the old place next year, and perhaps over at the southern side, toward the Giudecca. Everywhere there is deep water—about eight metres off the Molo, about six off the Dogana, at low water. And the bather waits until the tide has been flowing strongly for at least an hour, and then takes a gondola and goes off to the bath-house, and dives into pure salt water. It is a pity that no restaurant sufficient for breakfast, at least, exists at the bath: nothing is there but a wretched show of drinkables and cakes and biscuits; in fact, it is one of the desiderata at Venice—some good eating-place which enjoys the sea breeze and commands a view over the Lagoon. For an open-air dinner or breakfast one is obliged to go to the Lagoon, though not by steamboat, unless he has to be very saving indeed: why should he go by steamboat, with gondolas ready to take him, to wait for him, and to bring him back for perhaps two francs? But it is a pleasant place; and as the guest sits at his little table and waits to be served, he can see the bathers walking out to sea in search of water enough to cover them, and thinks, if he is a swimmer, that he will not imitate them.

But let us insist upon the main point, that Venice in summer is delightful. It is pleasant in May, pleasant in October, and perhaps pleasantest of all in August. And the beauty of sea and sky, the blue light over the Lagoon by day, the loveliness of the night sky, are not to be fully understood until one has resided in Venice in the height of summer.

R. S.

PHILADELPHIA'S PROVINCIALISM.

To the Editor of The Nation:

Sir: Your editorial article of November 26, on "The Lesson of Philadelphia," does not appeal to Philadelphians as a satisfactory explanation of a state of things which, every one admits, is very wretched. If you have taken the wrong ground, and I think you have not, the matter becomes hopelessly obscure. If it is not protection, what is it? Your view is confirmed by the fact that Philadelphia has only come under the reproach of provincialism since the State at large has become so violent a champion of protection. I am glad that Mr. Harkness has the freedom of your paper to say plainly what he, with hundreds of business men in this city, feel to be the truth about the Pennsylvania Railroad Company. But there is some doubt whether a railroad company whose first object is to get an outlet and inlet at New York for its Western traffic, will compass the "deliverance of this commonwealth," or that "the spell will be broken" by its interposition. The Baltimore and Ohio has treated Baltimore even more shockingly than the Pennsylvania Railroad has treated Philadelphia. It is nearly certain that if the Baltimore and Ohio revolutionize the industrial, intellectual, and social condition of this city, the result will be incidental to the great struggle between the rival companies. The Baltimore and Ohio once seriously debated whether it should not go around Philadelphia. It certainly is not coming here with any avowed regenerative purpose.

For the purposes of teaching a free-trade lesson your article was well to the point. Naturally Philadelphians are a bit loath to admit that protection is the root of the evil. Whatever the reason of it all is, I do not understand how any one who looks at the situation with fair-mindedness or judgment can be led to make such statements as does your correspondent "D. G." (*Nation*, No. 1067), about the Quakers and the Dutch. "D. G." conceives that the Quakers and the Dutch are responsible for "Philadelphia's degeneracy." Let me quote:

"The Quakers founded Philadelphia. For the first 100 years of her existence they controlled her principles and policy. Since then their influence, though gradually diminishing, has always been great. The history of these people is full of acts of heroism and benevolence; *but the essence of their belief is resistance to change of every sort, in dress, customs, and ideas. They never doubt, and they never investigate. They are incapable of intellectual inquiry, and they hate it.*"

The lines I have italicized were either written in the most careless and gross ignorance, or dictated by some petty spite. Some one else may speak for the Dutch, but as a member of the religious society of Friends (called Quakers), I am competent to reply that the above assertions are untrue; that no man who pretends to be fair-minded and at all informed concerning the Friends can support them for a single moment. "D. G.'s" remark that "They (the Dutch) are far inferior to the Quakers, have less natural ability, less education, less refinement," would give to the reader who was entirely ignorant on the subject the impression that the Quakers as a body and the Pennsylvania Dutch farmers might be classed together, though the former had the advantage in ability, education, and refinement. His statement reads as if it were intended to be patronizing and offensive. Of the Quakers he says: "They are incapable of intellectual inquiry, and they hate it," and of the Dutch, "High progress among them is an impossibility." The former of these statements is untrue, and it is hard to conceive that "D. G." did not know that it was false when he wrote it. He goes on to say:

"Their descendants [of the Dutch and the Quakers] are still with us—somewhat changed, it is true; dragged by force of circumstances and the march of modern civilization into a little improvement, *but always holding and resisting with all their might.* When the mass of the people are of this character, the efforts of the progressive few are in vain."

When a man makes such slanderous statements as these about a body of people who are everywhere held in such high regard and esteem as the Quakers, he should make them over his full signature. I am not attempting to defend Philadelphia. I only make this assertion: Take the Friends in this city as a body, and compare with them the most intelligent, refined, and public-spirited members of the remainder of the community, and the Friends will be found to be among the leaders, if not altogether in the van. They constitute a large majority of "the progressive few." As a body, Friends are celebrated for their high average intelligence and refinement. They certainly take the lead in this respect among those religious bodies which in England would be called dissenting, and into which men are forced rather by sincere conviction than by fashion and by conventionality. In this city if they do not take the first social position it is only because they renounce it. It is notorious that the people who pride themselves most on their social standing are connected on all sides with the Friends.

Least of all can they be justly accused of lack of public spirit. All Philadelphians know of the Pennsylvania Hospital, and are under obligations to the Friends for their part in it. Haverford College is an institution which deserves the highest rank among the smaller colleges. Last September was opened, under the management of the Friends, Bryn Mawr College for women. It is an institution which practises the most advanced educational methods (those of the Johns Hopkins University, which, by the way, was endowed by a Friend, and is largely managed by members of that society), and which has, so far, proved to be a remarkable success. Every Philadelphian knows that the men who have been foremost in all reform movements set on foot in this city were members of the Society of Friends. The Chairmanship of the Committee of One Hundred since its inception has been held by a Friend. I can think, off-hand, of at least twelve of the most active members of that committee who are Friends. Can it be possible that "D. G." was ignorant of all this when he wrote his letter to the *Nation*?

As is very evident, I am not suggesting theories to explain Philadelphia's sad plight, or bringing

forward remedies. My point is that Philadelphia has not been brought into her present condition by any apathy or lack of public spirit on the part of the Quakers. The Dutch only have influence in the State; the original indictment was against the city.—Very truly,

T. K. WORTHINGTON.

11 E. PENN STREET, GERMANTOWN.

[We have also received letters vehemently opposing some of the sweeping assertions of "D. G.," in our last issue, concerning the non-production of great men in Pennsylvania. Our space does not permit us to prolong the discussion in this direction, and we think we may fairly adjourn it to the columns of the Philadelphia press (where, indeed, "D. G." is already being flayed alive), or to the *Pennsylvania Magazine of American History*.—ED. NATION.]

POLITICS IN THE PENSION OFFICE.

TO THE EDITOR OF THE NATION:

SIR: Your criticism of General Black in the current number of the *Nation* for injecting a stump speech into his official report as Commissioner of Pensions, while at the same time you vouch for his alleged facts as unquestionably true, has attracted my attention. I have not seen his report, but in the bill of particulars with which you follow the general statement that "the Pension Office has been used for partisan purposes in the most shameless way," I think I see the earmarks of the gushing Commissioner, and so presume the items were chiefly gathered from that paper.

The particular feature upon which I desire to be heard is referred to in your remark that, "from the Chief of the Bureau down to the Medical Examining Board, almost every place has been filled with Republicans upon system." This I take to be an echo of the report, because it clearly implies (although it does not definitely charge) what the Commissioner proclaimed through the agency of Newspaper Row, when he foreshadowed his intention of reorganizing the medical examining boards, viz.: that they were not only partisan bodies in the sense that they were chiefly composed of Republicans, but that in their professional work the members were swayed by partisan considerations. Before giving my judgment on this wholesale indictment, let me say that that judgment has not been formed under the bias of a preconceived notion that ours is the best civil service on earth. On the contrary, I have been in sympathetic accord with the *Nation's* discussions of the subject from the time of the introduction of the Jenckes Reform Bill, and, let me confess it, so thoroughly indoctrinated by them that I have been unable to follow you in now yielding—as it seems to me you do—the essential principle of the reform by admitting that unexceptionable officers ought to be removed until a political balance of the service is reached. Fully recognizing, then, the extent to which the civil service had become debauched by the general acceptance of the doctrine that the business offices of the Government were the legitimate rewards of party service, I am ready to hazard my reputation for sanity by saying that I believe the official work of the medical service of the Pension Office has been, with rare possible exceptions, as uncolored by partisanship as that of the medical service of the army and navy. The members of medical examining boards know nothing whatever of the political affiliations of the great majority of the applicants who appear before them; and if they were governed by no higher considerations, they have enough to do to earn the scanty fee they receive for each examination, without wasting their time on matters wholly foreign to their work.

The medical service of the Pension Office has suffered, in common with all other branches of the civil service, in the appointment and retention of incompetent men under the patronage theory that has so long obtained; but the nature of its work, and the conditions under which it is performed, are not favorable to the development of partisanship in its performance. I speak from an experience of over twenty-two years as an examining surgeon, the beginning of my service antedating by several years the establishment of examining boards, and I have abundant reason for saying that every Commissioner of Pensions, from Barrett (under whom the office first had a medical service of its own) down to Dudley, has honestly tried to keep that service clean and to promote its efficiency.

Medical examining boards as first constituted were extra-legal bodies, created by the fiat of the Commissioner, in order to minimize the evils growing out of the presence in the service of incompetent men which he—though nominally the appointing officer—was compelled by the power behind the throne, the Congressional office-brokers, to retain upon its rolls. So long as the size of the boards lay within the discretion of the Commissioner, he found it impossible to keep those in the larger cities within wieldy and efficient proportions, the pressure from Congressmen being, as before, too strong to be resisted. He, therefore, secured the enactment of a law providing for their creation as permanent bodies, and restricting the number of members to three—an act which has proved of great value to the service. That a large majority of the members of the medical examining boards have been Republicans is doubtless true, but it is unwarrantable to say that these places have been filled with Republicans upon system. The board in this city, of which I was a member from its organization until my removal by Commissioner Black a few months ago, has always had a Democratic member, and, what is much more to the purpose (as bearing upon the charge of systematic packing with Republicans), when strong partisan influences were brought to bear upon the Commissioner to secure the removal of a member because he was a Democrat, in order that his place might be given to a Republican, my successful protest against his removal was (beyond vouching for him as a capable and conscientious officer) based distinctly upon the ground that the Board had never had and ought not to be invested with any political significance whatever. This occurred during the service of Commissioner Dudley, who has been more strongly accused of partisanship in office than any of his predecessors. I know of instances of examining surgeons, Democrats, who were avowed rebels during the war, against whom charges have been preferred by disappointed applicants who fancied that they had not been justly treated by them, and insisted that the fact of their having been rebels was presumptive evidence that they did not feel a proper sympathy for wounded Union soldiers. Special examiners of the Pension Office were detailed to investigate these cases, and upon their reports that the surgeons were conscientious men, and professionally the most competent in their neighborhoods, Commissioner Dudley refused to dismiss them.

The nature of my relations to the Pension Office has not been such as to give me any information relative to Commissioner Dudley's operations in the Ohio campaign of 1884; but it has been such as to warrant me in speaking with confidence of his attitude toward the medical service of his bureau; and justice to him and to his predecessors constrains me to say that I believe none of them have ever manifested any disposition to sacrifice its efficiency to partisan considerations.

General Black seems to have been the first of the whole line of Commissioners to whom it has occurred that he might possibly make this service an active factor in partisan or personal politics. At all events, he is the first of his line to advertise for volunteers to assist in looting the medical examining boards as a part of the legitimate plunder of a partisan victory. It might well be that in his contempt for those who would overlook so tempting a possibility of opening up an entirely new field of partisan activity, *he* overlooked the indecency of making his official report the vehicle of its expression. He should have confined his "stop thief" cry to his usual channel of communication with the public—the bureau of the Washington correspondents.—Respectfully,

JOSEPH ROBBINS.

QUINCY, ILL., December 9, 1885.

Notes.

KARL KRON, known to all readers of 'cycling journals, at last announces for February, 1886, his long elaborated 'Ten Thousand Miles on a Bicycle'—not, as the title might imply, a simple record of personal adventure, but a most practical and minute guide for those who follow after in respect to roads, inns, transportation, etc., etc. It is safe to say that it will be an indispensable book to every tourist on the wheel. The addresses of subscribers will be printed with it. Karl Kron's address is University Building, Washington Square, New York city.

Ginn & Co., Boston, have in press Adolf Kaegi's 'Rigveda,' translated by R. Arrowsmith; and a 'Music Primer,' by G. A. Veazie, jr.

S. C. Heath & Co., Boston, will issue next month an American edition of Compayre's 'Histoire de la Pédagogie,' translated by W. H. Payne, Professor in the University of Michigan.

A new monthly periodical, entitled *Modern Language Notes*, and devoted to the interests of the academic study of English, German, and the Romance languages, is announced to appear with the new year, under the editorial management of Prof. A. M. Elliott, aided by several of his colleagues and assistants in the Johns Hopkins University. The Modern Language Association of America, by the way, will hold its third annual meeting in Boston on December 29, 30.

T. Fisher Unwin's 'Annual for 1885' is to be called 'The Broken Shaft,' and will consist of seven tales and an introduction by the clever writers caught on the steamer *Bavaria* in the Christmas season by the accident above-mentioned. Mr. Henry Norman edits the collection, and furnishes the introduction and the seventh tale. F. M. Crawford, R. L. Stevenson, F. Anstey, W. H. Pollock, William Archer, and Tighe Hopkins are his co-laborers. A few illustrations adorn the work. D. Appleton & Co. will be the American publishers.

Mr. Archer, by the way, has a critical study of his fellow-passenger, Robert Louis Stevenson, in the November number of *Time*.

The second volume in Roberts Brothers' translations from Balzac is the 'Duchesse de Langeais,' with some smaller and (in the original) not savory pieces. We have also received 'After-Dinner Stories from Balzac, done into English by Myndart Verelst, with an introduction by Edgar Saltus' (New York: George J. Coombes). In both cases the translations are bad — very unfaithful, we may add, without reference to the expurgations (in the interest of Anglo-Saxon decency) which characterize the Boston volume particularly. On this point it cannot be necessary to expatiate. That which is of the essence of an author's work cannot honestly be sup-

pressed by a translator, even though the alternative be to abandon his task altogether. In another point of view, one must deprecate such an adaptation, *pueris virginibusque*, as shall enable ingenuous youth to acknowledge having read (as they suppose) works which, in their entirety, they would blush to read or to have read.

Miss Healy's 'Painters of the Italian Renaissance' (Belford, Clarke & Co.) may be recommended to "the young people of the United States," to whom it is dedicated, as on the whole a sound and useful piece of elementary art history. Of course, it contains nothing new, the facts and dates being compiled from acknowledged authorities, and the critical judgments of the safe and traditional order. The style is clear and simple, without any tendency toward either "gush" or childishness, and the engravings by T. de Mare are the most adequate we have ever seen in a book of this class; that which falls the furthest short of the mark is the plate of the "Mona Lisa," with which picture engravers have always struggled in vain. These illustrations, though good, are somewhat too highly praised by the author, who says of the plate of Titian's Charles V., for example, "the engraving gives the portrait itself. One almost sees the rich coloring." The paper and typography are good and misprints are rare. We have noticed Pollaiuolo for Pollaiuolo (constantly), and paris for Paris (p. 168). The most unfortunate thing about the book is the cover, which is tastelessly designed.

A. D. F. Randolph & Co. have had the making of many handsome books this season, and such may well be pronounced 'Christmas-Tide in Song and Story.' It has a *Pars Sacra* and a *Pars Secularis*, in the latter of which figure selections from Irving, Dickens, Thackeray, J. A. Symonds, H. C. Andersen, Phoebe Cary, Charles Mackay, Tennyson, and yet other writers. The binding is well conceived, and the paper and presswork are all that could be desired.

There is the usual flood of Christmas cards of every imaginable size, style, and price, and of every degree of appropriateness and inappropriateness of subject, from Mr. Low's seriously designed "Nativity" (L. Prang & Co.)—unfortunately spoiled in the lithographing—to spring and summer landscapes and comic animals. There are gorgeous pieces of upholstery in satin, with bows of ribbon and easel backs, and there are modest bits of pasteboard for short purses. From Hildesheimer & Faulkner (London; New York. Appleton) we notice even palettes and cocked-hats. The designing of these prettinesses doubtless brings bread to the mouths of many well-meaning beginners in art, and gives pleasure to those who send and receive them, but there is very little merit as art or decoration in most of them. Perhaps the purely floral designs are the best, on the whole, for flowers are always pleasant, and require far less knowledge and training on the part of the designer than more ambitious subjects. One of the noticeable things about all these cards is the rarity of anything like good and artistic lettering. George R. Lockwood & Son send what seems to be a novelty—a set of selections of Christmas literature in prose and verse, neatly printed and bound in white paper with gilt lettering. Some cards from Raphael Tuck & Sons approach nearer the style of design common upon handkerchief and cuff boxes than anything we have seen.

Two large and elaborate landscape etchings by Benjamin Lander come to us from C. Klackner (New York). They are pretty but overworked. The artist has made the mistake of trying to give full tone and has lost all simplicity and largeness of line, drawing the hair on the cows rather than the cows, and the grass upon the ground rather than the ground. The figures in one of them are very feeble.

The '*Wide Awake* Art Prints' (Boston: D. Lothrop & Co.) are a set of excellent photogravure reproductions, by the new Lewis process, of original drawings and paintings originating in the *Wide Awake* magazine, and are sold at a cheap rate.

The literary trade organs, like the *Publishers' Weekly*, the *Bookseller*, and the *Book News*, all make a handsome appearance this year in their holiday issues, filled with sample illustrations of the season's product. L. W. Schmidt sends us a corresponding German organ, *Seemann's Litterarischer Jahresbericht und Weihnachtskatalog*, in which the engravings are as a rule inferior to our own, but which nevertheless employs colored inks in a way suggestive of great recklessness as to cost. The color may be uniform for text and engraving, or it may be reserved for the latter alone, and there may be more than one tint. Doubtless it is more expensive to print cuts with the care that we do in black and white, than to indulge in these fancy tints occasionally, with extra press-work. At all events a magazine like *Vom Fels zum Meer*, or a catalogue like Seemann's (which, by the way, is printed in Roman type), does colorwise what is almost never attempted among us.

Our poets differ greatly in their capacity for being chopped up into daily quotations for the now fashionable literary calendars. Without putting to the test the "Lowell Calendar" (Houghton, Mifflin & Co.), we may be sure that the compiler had little difficulty in finding 365 passages able to stand on their own legs, as it were, and worth committing by heart for their own sake—if that, by no means the worst use these calendars can be put to, should be attempted. The background of this particular calendar is of gilt, with a good portrait of Mr. Lowell, and a view of his ancestral Elmwood in "June, dear June," in lively colors.

From D. Lothrop & Co., Boston, we have a "Golden-Text Calendar," of a Scriptural and Sunday-school cast.

Freakish is the "Ruling Lights Calendar" devised by Miss E. N. Little and published (or manufactured and sold) by A. L. Cassino, Boston. A nickel-plated standard, with cross yoke, holds in front a lozenge-shaped mat bearing the name of the month, a landscape or other design, and some pietistic symbolism; and at each extremity of the yoke round pasteboard counters marked with the numbers and days respectively. These are so hung on rings as to permit of being turned back daily or monthly. But *clearness*, the first requisite in a calendar, has been lost sight of, and it would be worth one's eyes to use this steadily.

Mr. Duncan MacGregor Crerar's poem, read before the Burns Society of this city on the 126th anniversary of the poet's birthday, has been very tastefully printed in brown ink on rough paper by Marcus Ward & Co. Each stanza has a leaf to itself, and the page is adorned with some view or design memorial of Burns, as his birthplace, his farm, his mausoleum, Stirling Castle, Ayr, etc., etc. His bold autograph is imitated on the first leaf. A blue ribbon is the only binding. The souvenir is well calculated to please the Scottish fancy.

So varied are the contents of Vols. 70, 71 of *Harper's Monthly*, just received in their bound form, that they can hardly be summarized. The illustrations have fully maintained their high level. Among portraits, those of Lincoln and Grant are preëminent, while the series representing Jersey cattle in America, the cuts after Barye's sculpture, and the landscape views attending (and outweighing) 'Nature's Serial Story,' are perfection in their respective kinds.

The 'Family Genealogical Record,' issued by W. B. Clarke & Carruth, Boston, is a compact arrangement of blank spaces, comprehending ten generations of ancestry. It appears to us, however, inferior to the ingenious Trumbull-Whitmore 'Ancestral Tablets' (Boston: Cupples, Upham & Co.), which, moreover, is quite as roomy as the ordinary pedigree-hunter needs.

The second part of the great 'New English Dictionary,' edited for the Philological Society by Dr. Murray (Oxford: Clarendon Press; New York: Macmillan), is now procurable. It extends from *Anta* to *Battening*. We shall speak of it in detail hereafter. It is pleasant to read of the fresh voluntary assistance rendered in the most disinterested way by scholars and authors. Among the regular volunteers who contributed so much to the fulness and accuracy of Part I., Dr. Fitzedward Hall still honorably represents our country and our learning.

The customary novelty in *Science* is for the last issue a plate of portraits of Washington, in three groups—profile, nearly full face, and three quarters—with a resultant "composite" from each. That derived from the five in the lower right-hand corner (which range from 1785 to 1790, and include Houdon's bust and Trumbull's portrait) is quite the most satisfactory. Among the articles noteworthy are Mr. Arnold Hague's account of the disintegration of the Central Park obelisk, under its new climatic conditions, and a discussion of a map of statures in France, the tall Gauls being those north and east of a line drawn approximately from Grenoble to Havre.

Mrs. Howard Vincent, who visited this country last year, has just published an account of her travels, entitled 'Forty Thousand Miles over Land and Water.' The information which she was able to gather is at times exceedingly interesting, as will be inferred from this extract from her description of Boston: "There is the old Scotch church, so famous as the political meeting-place of the Boston Tea Party; Tancred Hall, the 'Cradle of Liberty,' nurtured by the patriotic orations of Adams, Everett, and above all of Daniel Webster." In another place she says: "The Toronto University is second only to Harvard on the American Continent." This latter remark reminds us that a recent writer in a foreign journal speaks of the university at "St. Anns Harbour" in Michigan.

The most important of the works commemorative of the revocation of the Edict of Nantes appears to be the 'History of the French Colony in Brandenburg, Prussia,' recently published by the Consistory of the French Church in Berlin. It is a large, richly illustrated volume, in the preparation of which the editor, Dr. Ed. Muret, has had access to the documents preserved in the State and Refuge archives. In an appendix there are detailed accounts of each of the forty-nine French colonies in Prussia, the largest of which, at the close of the seventeenth century, formed a fourth part of the population of Berlin. Striking evidence is given in it of the reviving influence which the refugees had upon education, literature, the industries, and the horticulture of Prussia, coming as they did at a time when the country was still prostrate from the effects of the Thirty Years' War.

The contributions made to German literature by these colonists and their descendants is even still more forcibly shown in the 'France Protestante' of M. Haag. This monumental work, which was first published in 1846–59, contains not only biographies of all French Protestants of note and their descendants, but also elaborate bibliographical descriptions of their works, chiefly French and German. The first part of the fifth volume of a second and greatly enlarged edition of this work, containing the letter D, has just been published in Paris.

The Antiquarium of F. A. Brockhaus, in Leip-

zig, has purchased the library of the late Professor Lepsius, of Berlin. The "first part" of the catalogue, comprising, under 1,686 titles, the works on Egyptology, has just arrived, and as a bibliographical guide alone, is very valuable and worthy of preservation for reference.

An inedited contemporary account of the early exploits of Joan of Arc has lately been brought to light in the archives of Rome. Examination shows that it is properly an additional chapter to the chronicle published at Poitiers in 1579 under the title 'Breviarium Historiale.' Several manuscripts are extant of this work, but only one, that at Rome, contains the part relating to the Maid of Orleans. The author of the narrative is unknown, but there are some indications in the text that he was an attaché of the Court of Martin V., and was in Rome in 1428-29. No new facts are brought to light.

Among the latest French announcements are the second series of M. Paul Bourget's 'Essais de Psychologie Contemporaine,' devoted to M. Dumas fils, the Goncourts, Amiel, Turgeneff, and M. Leconte de Lisle—whose name, by the way, was recently twisted in a *Herald* cable-message into "Le Comte de Lisle"; and an 'Étude sur Mistress Élizabeth Browning, suivie de ses quarante-quatres Sonnets portugais, et de quelques autres de ses poèmes, traduits par Charles des Guerrois.'

M. Auguste Vitu, who has been the dramatic critic of the *Figaro* for now a dozen years, has begun to collect into volumes the criticisms he has written from day to day, or rather from night to night. Under the title, 'Les Mille et Une Nuits du Théâtre,' two volumes have already appeared (Paris: Ollendorff; New York: F. W. Christern), coming down to March 29, 1874, when the "Comtesse de Sommerive" was acted in Paris not long before it was produced in New York as "Alixe." M. Vitu is not as well equipped or as acute a dramatic critic as M. Sarcey, and his articles naturally lack the judicial calmness of M. Sarcey's weekly deliverances; but they have a value of their own. They are often witty, and they are welcome in a form fit for preservation.

In a recent issue we inadvertently spoke of St. Paul as a great lumber-distributing centre. We should, of course, have said Minneapolis, as there is comparatively little lumber business carried on in St. Paul itself; but these two cities are so closely connected, geographically, commercially, and socially, that it is often difficult to think of them otherwise than collectively.

One or two persons have called our attention to the fact that Miss Jessie Fothergill's 'Healey,' noticed among recent novels, in No. 1064 of the *Nation*, is her *first* book, dating in England some ten years back, and not, as we had supposed from the date of its appearance here, her latest. Our inference, therefore, of decadence on the part of this writer should rather be changed into the opposite.

—"X." reminds us: "In your review of Ropes's 'Napoleon I.' your reviewer has illegally promoted our late visitor, Doctor Farrar, in his ecclesiastical rank. The Doctor is at present Vicar of St. Margaret's parish and also Archdeacon of Westminster, in the diocese of London. His deanery and even his episcopal palace may be awaiting him, but he certainly has reached neither yet."

—Balzac, in some dithyrambic remarks on the sense of touch and on the hand as its principal implement, states that "men of strong intellect have almost always had beautiful hands, the perfection of which is the distinctive index of a high destination." In support of this view he instances a number of well-known facts in common life. Had he lived in these days of experimental psychological research he would have been enabled to greatly enlarge his notions on this subject. Professor G. Stanley Hall and Doctor H. H. Donaldson, of Johns Hopkins University, who, independently of the value of their discoveries, deserve commendation as being among the earliest pioneers in introducing in this country the exact methods of psychologic research employed in Germany, have issued, in a separate reprint from *Mind*, two pamphlets on the "Temperature-Sense" and on "Motor Sensations of the Skin," in which a number of curious observations, partly new and partly corroborative of the discoveries of Blix, Goldscheider, and others, are recorded. These, taken in connection with the biologic fact that all our senses have their genetic origin in the external embryological layer, justify the authors in claiming that they "indicate the skin as not only the primeval and only reliable source of our knowledge of the external world, or the archæological field of psychology, but as a just-opening experimental domain of great breadth, where work seems now possible that may compare in both quality and quantity with that accomplished in physiological optics, and which may shed new light on some of the most fundamental problems of psychical action and unfolding." So little attention has hitherto been given to dermal psychology that it seems hardly strange that, even among educated persons, the notion should prevail that the "sense of touch"—or, still more vaguely, the "sense of feeling"—is the unique psychic function of the skin. The researches described in the pamphlets now before us show conclusively that not only is there a distinct and separate apparatus for touch, or pressure, and temperature, but that there are distinctly localized spots on the skin, on some of which cold is felt, on others warmth, and pain, and pressure, respectively. These spots are never superposed on one another; and a needle may, for instance, be plunged into a cold spot or a heat spot without causing any pain. The experiments showed that the skin between the cold spots was not sensitive to cold; that the points were differently distributed in different parts of the same individual, and in similar parts of different individuals; that they were very small but permanent, so that they could always be found again; and that they were easily exhausted. Between the heat and pain sensations, there seems to be a certain relationship. Contrary to Weber's statement, the œsophagus, through its entire length, was found sensitive to temperature.

—The experiments in testing the direction of an object moved on an invisible part of the skin and the various sensations produced are also full of interest and suggestion. With a slight electric stimulus, "for a time tickling is quite unpleasantly dominant, at other places the point seems to scratch, at others the thrilling, quivering sensation familiar in electric stimulation seems dominant, while at others sharp, sudden cutting pains, and at still others no sensations save that of a moving point, are felt. . . . It is, moreover, extremely hard to sharply differentiate and identify sensations that seem to be so impacted and run together, and which language has never before been called upon to disentangle." One of the most interesting and novel points in these pamphlets is the showing how the progress of medicine may unexpectedly help to solve a psychological problem. Thus the discovery of cocaine has demonstrated beyond all doubt that the sensations of heat and cold are completely differentiated from touch and pain. By means of a 5 per cent. solution of muriate of cocaine, Mr. Donaldson rendered his eye completely insensitive to pain or contact, while it still readily felt heat and cold. The drug had clearly paralyzed one class of nerves, leaving the others uninfluenced. With the assistance of these researches histologists will perhaps have less difficulty than heretofore in distinguishing these nerves from one another.

—A late London *Times* gives an account of the nomination of the sheriffs. As this office exemplifies the old etymology *honos est onus*, having no pay connected with it and being subject to onerous expenses, the number of people who with one consent began to make excuse was naturally very great. The principal reason for not wishing to serve was crippled resources; it is really touching to read of the long array of county gentlemen of consideration reduced to straits. Let the following serve as a specimen:

"In Leicestershire a gentleman asked to be excused on the ground that since 1879, when the agricultural depression began, his income had been greatly reduced; that many of his tenants had left, and he had 1,400 acres in hand, which he had to farm himself; and that he had, moreover, to meet a mortgage debt of £10,000 charged on the estate, and had for these purposes to borrow £14,000; that his principal tenant could not or would not pay his rent, and that most of his income was absorbed in charges and expenses."

The occasion was furthermore interesting as being one of the most ancient ceremonies of the law, which has existed for about six centuries. The Queen's Remembrancer attends in state costume, and reads over the names for each county; the list is afterwards to be laid before the Queen for selection, "Her Majesty," says the *Times*, "making her selection by pricking the list with a gold bodkin, a usage which arose, as Lord Campbell when Lord Chancellor told Her Majesty, in an age when kings could not write their names." Is this necessarily the reason? Or is it not rather merely to save writing, as the *Times* itself suggests? A somewhat analogous custom appears elsewhere; once when Emperor Claudius was going over the jury-lists, he objected to a man's serving who had a valid excuse, and one is reminded of "pricking the Sheriffs" and the Queen's gold bodkin by the word *expungeret*, 'punched out, pricked out,' used by Suetonius, *Claud.* 15: *cum decurias rerum actu expungeret, eum, qui dissimulata vacatione quam beneficio liberorum habebat responderat, ut cupidum iudicandi dimisit.*

—Professor Paul Fredericq, of Ghent, whose description of the systems of historical instruction in the universities of Germany and of France we have already noticed, has sent us a companion paper upon England and Scotland. As to the Scotch universities, it is almost literally true that there is no historical instruction given in them; only two or three pages are therefore devoted to Scotland. The universities of Cambridge, Oxford, and London, on the other hand, receive detailed consideration, and due credit is given to the energy and success with which historical study is pursued in them. Professors Seeley, of Cambridge, Stubbs and Freeman, of Oxford, and Beesly and Gardiner of London, with their able and industrious coadjutors, have worked a marvellous change in this branch of education; for it is only a few years since England was as derelict as Scotland now is. Even as it is, he thinks that there is a lack, in these institutions, of study of the authorities at first hand—what the Germans call *Quellenstudien*. The assigned work seems to be too much in the line of mere reading, especially at Oxford—a course of reading so varied and extensive that it seems likely to result in vague and superficial knowledge. The same with the examinations. It is generally recognized that the system of written examination is carried to a greater extent in England than elsewhere—we have reason to believe that the English themselves are coming to think this a mistake; and Professor Fredericq, from an inspection and comparison of the ex-

amination papers, comes to the conclusion that they point to a kind of work which covers too much ground, and consists too much in acquiring a large number of disconnected facts, in a considerable degree at second hand. However this may be, there is no doubt that the younger school of historical students in England are doing excellent work, thorough in preparation and admirable in execution. Their defect is at all events just the opposite to that which Professor Fredericq criticised in Germany, where it appeared to him that the too exclusive devotion to the study of original documents, in very minute points of detail, is apt to result in the loss of broad general views and a due sense of proportion.

—Professor Fredericq has sent us another recent publication, entitled 'De Nederlanden onder Keizer Karel' (The Netherlands under Emperor Charles); the present publication being the first part, and covering the thirty first years of the sixteenth century. It is a duodecimo of 194 pages, and consists of fourteen chapters. No less than ten of these chapters are devoted to the history of the Reformation in the Netherlands during this period, and it would appear that the Reformation had got more of a foothold there at this early date than is generally supposed. The last two chapters treat respectively of the contemporary literature, art, etc., and of the general history of the Netherlands. The work is written in Flemish—essentially the same language as Dutch; but no person who reads German need have much difficulty with this related tongue, and students of the Reformation period will find here an interesting and neglected field.

— Histories of German literature are so numerous that one would suppose the production of one was obligatory on whoever purposed setting up as a critic; but upon closer examination one finds that, with the exception of Julian Schmidt's, and, very recently, Wilhelm Scherer's, they all are written by second or third-rate authors, and that one is superior to another only as respects its typography and date of issue. The real critics, such as Heine, Karl Hillebrand, Herman Grimm, and Paul Lindau, have published only monographs. The latest of these works, of which the third and concluding volume has just appeared, is by Franz Hirsch, and we find it advertised, not, in the usual manner, by "notices of the press," but in a more strictly commercial fashion, namely, by sample. The reader is invited to buy the work on the strength of the author's opinions of three writers of the day, which are given in full. The only one of the three (Karl Bleibtreu) for whom Mr. Hirsch has a good word, is quite unknown to us, though as he was not born till 1859 we probably shall yet have the pleasure of making his acquaintance. But the remaining two are old friends, and if Mr. Hirsch's judgments on other authors are as "spicy" as are his views of these, we shall not wonder if his book attracts considerable attention. His first victim is "E. Marlitt," whose "astonishing success is not due to any merit of whatever kind. Her books are a mixture of old maids' commonplace, of middle-class lubricity, partially concealed under a mantle of phrases," and of other things too numerous to mention. "In a word, in these novels good taste is outraged and healthy feeling corrupted," and much more in the same strain. Judged by any but a low standard, the "Marlitt" books are certainly worthless, yet they hardly deserve condemnation so severe as this. Such criticism, however, clears the air, and it might be worth while for responsible critics occasionally to take up our own works of a similar character, which, in spite of the high price incident to copyright protection, must, as regards sales, put to shame the most popular issues of the cheap "libraries." Mr. Hirsch's third sample is devoted to Johannes Scherr, but we forbear to quote the savage attack on this "(involuntary) historical novelist" who "knew his public well enough to achieve wide success."

—Besides the men of science, a good many Americans will regretfully note the resignation by Sir Joseph Hooker of the directorship of that noble institution which is inadequately designated by its title, the Royal Gardens, Kew. The King's garden belonging to the little brick palace and grounds of George III. at Kew had somehow come to be botanically notable a hundred years ago; and, although decayed, it still preserved a certain importance and hopefulness when, in the year 1839, it was turned over by the Crown to the Government for more public and popular as well as scientific uses, and the late Sir William Hooker was translated from the professorship and garden at Glasgow, which he had made illustrious, to the charge of the now national establishment. "Kew" has ever since meant Kew Gardens, with its museums and herbaria and galleries, as well as its pleasure grounds, arboretum, and conservatories. It was developed from small beginnings into the great establishment which is now of unrivalled scientific importance as well as popularity; and all these years it has been under the direction of the Hookers, father and son, who indeed have made it what it is, and have so identified themselves with it that, just now, Kew without a Hooker will seem to be out of the course of nature. It is pleasant to know that the promotion of the assistant director, Mr. Dyer, places the establishment in the charge of a man of tried scientific as well as administrative ability—one, moreover, who, although he came without such ties, is connected by marriage with the Hookerian family.

—Still more pleasant and most important it is to know that this change which the late Director has decided upon, while still vigorous and of undiminished powers, is merely from administrative to more strictly scientific work, that he may prosecute more steadily and hopefully the botanical undertakings which he has in hand, and which are enough to task all the energies of a younger man, but which yet demand—as such work does—all the various knowledge and critical tact and sureness of judgment which comes only with long experience. And here let us record our dissent from the doctrine of Huxley's playful suggestion that every scientific worker should commit the happy despatch when he reaches the age of sixty years; that before this he will have done all the original work he ever will do, and thenceforward will be more likely to hinder than to help the progress of original scientific research. It is true enough that the older men will not be likely to strike out new lines or discover new principles, but the advance guard fights only a small part of the battle. If the veteran has ever done good work in his younger days, and has followed it up with the steady devotion that wins, he has not only acquired a deal of judgment, but has laid out more work than he can ever hope to accomplish, yet which no one else is likely to do so well, or at least so readily. Therefore let us hope still for years of excellent fruit-bearing in age by the retired President of the Royal Society and from his predecessor, the retiring Director of Kew.

—Readers to whom the story of the Waldensian revolt against Rome possesses perennial interest will find much food for thought in the 'Histoire Littéraire des Vaudois du Piémont,' by Édouard Montet (Paris: Fischbacher, 1885). Those who are familiar with M. Montet's previous investigations in the same field will be prepared to find in it a work of solid erudition and sound criticism. The labors of Dieckhoff, Herzog, Bradshaw, and others have already served to dissipate the nebulous antiquity with which Perrin and Léger had succeeded in investing the development of the Waldensian faith, but it was reserved for M. Montet to give a conscientious examination and collation of all the remains of its literature preserved in the collections of Geneva, Strassburg, Cambridge, and Dublin. Although these are not as abundant as could be wished, they are sufficient to show how slow was the growth of what we are accustomed to regard as distinctively Waldensian doctrines, and how long the sectaries clung to the church which recognized them only to exterminate them. To indicate this has required close and laborious investigation and comparison, for the details of the subject are intricate, but M. Montet possesses the true historical instinct, together with the literary ability to present his results in a clear and perspicuous manner. No one hereafter can pretend to study the religious development of the middle ages without the assistance of this compact résumé of the spiritual life of the martyrs of Angrogna and Val Louise.

ORMSBY'S DON QUIXOTE.—I.

The Ingenious Gentleman Don Quixote of La Mancha. By Miguel de Cervantes Saavedra. A Translation, with Introduction and Notes, by John Ormsby, translator of the 'Poem of the Cid.' Macmillan & Co. 1885. 4 vols., 8vo.

It is not flattering to English enterprise and scholarship that, after nearly three centuries that have passed since the 'Don Quixote' was published, no adequate version has hitherto been engrafted on the national literature. The four best known performances in this field which have come down to us from Shelton (1612-20), Motteux (1712), Jarvis (1742), and Smollett (1755), represent fairly, perhaps, the possibilities of their day in England, but are certainly far behind the just requirements of modern readers. Shelton, when he made his version of the First Part, hurriedly, as he confesses,* had no auxiliaries of any kind to illustrate his text, and of dictionaries only that of Oudin, which appeared at Paris in January, 1607, since those of Percival, Minshew, and Pallet would be of little utility in a work like this of Cervantes. For the Second Part, he had now the Vocabulary of Covarrúbias, which was an immense gain, though his translation does not show that he availed himself of it. Possibly he had, like Percival (let us hope not for similar reasons), long been a wanderer in the Peninsula, where he would acquire something better than a book knowledge of so difficult a language as the popular Castilian, by mingling with the very classes that represent the principal characters in our romance. At all events, his version is peculiarly interesting and valuable, chiefly because, as Mr. Ormsby justly remarks, "he had the inestimable advantage of belonging to the same generation as Cervantes." And after all, do we not owe to him (through Percival) the good word "Dapple," and scores of others, which the present interpreter has wisely adopted?

The three English translators of the eighteenth century had special difficulties to encounter, resulting from the lapse of time and the neglect of those earlier in the field to smooth the path. Those who had known Cervantes and the immediate generations who still preserved some traditions of his career, had now utterly passed away. In and out of Spain nothing was reported of the life of the great writer whose characters had long become proverbial in the leading languages of Europe. Even the singular old folio of Haëdo,

*"Hauing translated some fiue or sixe yeeres agoe, the Historie of Don Quixote, out of the Spanish Tongue, into the English, in the space of *fortie dayes*" (ed. of 1612, Dedication).

which had appeared as far back as 1612, and told of the birthplace and captivity of Cervantes, was not unearthed until after Jarvis's death, when the literary historian, Father Sarmiento, chanced to purchase the volume and communicated his discovery (1752). Moreover, they had no commentary, no aids to clear up the absurdities of a corrupt text and a slovenly composition, and above all they knew nothing of the Spanish people, the idiosyncrasies of type with which they had to deal. Therefore it is not surprising that they missed the true meaning of the book, converting it into a caricature, by treating as a facetious burlesque a story that depended for its power on being maintained as a veritable history, stored with credible facts, marvellous episodes, and grave philosophy.

In the times we have attained, in which the demand is more imperious because the facilities for thorough preparation are incomparably greater, there can be no valid excuse for an imperfect rendering of the 'Don Quixote,' and criticism, or, what is still more formidable, the public instinct, will not condone it. It is not enough to have acquired a certain knowledge of the language at home, surrounded by English ideas and comforts, and then to take the fast express for Paris, Bordeaux, Madrid, and Alcázar San Juan, carefully ensconced in the *coupé* and *berlina*, with rugs and lunch baskets, portmanteaux and revolvers, field-glasses and "Murrays," and, in this exclusive, unsympathetic, nineteenth-century outfit, to rush about among the simple peasantry of La Mancha, expecting to find windmills and ventas, Dulcineas and castles, Sanchos and asses, walking and talking and braying and looking just as fancy has painted them in the great prototype that no foreigner can ever fathom or interpret who approaches the battleground through that golden gate. And after all, it is not as a Manchegan that Sancho acts and speaks, but as an every-day or average Castilian of a certain class and breeding, who may be found as well in the Rondas of Madrid, the Zocodovér of Toledo, or under the arcades of Medina and Valladolid. To reach the people of his book, as Cervantes himself knew and portrayed them, the true investigator - that is, the true philosopher—will resolutely abandon railways, those spoilers of ancient civilizations and picturesque relics, will visit the smaller towns and villages in sash, jacket, and *montera*, mounted on Dapple, if it be harvest, when mules are in requisition, and horses are not to be had. He will act sagely and avert suspicion by first making friends with the alcalde, the cura, and the barber-surgeon, and with this *carte de séjour* he is competent to sit down at their board, dip his sop out of the common bowl, and learn to tip the *bota* without bringing the mouthpiece to his lips. He will cut his bread with the *navaja* that he keeps in his belt, and know how to put aside the persistent beggar with a *perdóne hermano*. He will say *Jesús (ha-sooce')* when his neighbor sneezes, and respond *amén* to a chance quotation from the Spaniard's Koran. He will put on his hat, when bidden, in the presence of his host, because so do the "grandes" in the presence of their king. He will never laugh, which is un-Spanish, albeit they have the loudest word for laughter in the vocabulary of joy—*la carcajada*. He will boast of his "rancid pedigree," which simply means his genuine stock, without taint of Jew or Moor or Lutheran heresy; of the *honradez* of his people, and of his personal honor as a cavalier, though he came to them mounted on an ass. No incongruities ever haunt the Spanish mind: the beggar may be an hidalgo "by the four sides"—that is, "by father and mother and grandparents two." But they are sober, abstemious, grave, dignified even in rags, hospitable in their way; and in these things, with their lofty words and solemn Castilian, resides the antiphrasis of their character, so indispensable to fathom to him who would interpret their greatest and best limner. It is here and thus that the stranger will grasp the true spirit of that venerable vernacular, forged in the secrets of time under Roman dominion out of Celtic and Iberian habits and modes of thinking, welded so strong with Gothic spears and Saracen scimitars that no suture or scar is discernible more. This is indeed that something that cannot be learned from afar, for it contains in amalgam all the quaint grandeur of mediæval strife, and of those times when Spain's influence dominated the world in things temporal, as did the "Vicar of God" in spiritual things.

To comprehend a work like this masterpiece of Cervantes, the translator, or he who aspires to be one, must enter into the age it depicts, be in full sympathy with the people it portrays, feel the force of the grand old obsolete diction, patched and interlarded with an occasional trace of a still more antiquated speech. He must, therefore, have read and pondered the classics of Spain's chivalrous ages—that early literature, so distinct in its own organic aroma from the diluted Hispano-Franco-Latin of Castelar and the Athenæum. He must be conversant with the chronicles of her kings and heroes, published in the fine old Gothic editions, bound in their original vellum, with the fly-leaves scribbled with ancient signatures and the cabalistic rubrics of notaries and inquisitors; then the whole library of chivalry books, from Amadis to Policisne, and down through the savory Celestinas, Lazarillos, and 'Pigsties of Pluto,' to their linsal descendants of to-day, the 'Pictures of Andalusia,' the sallies of the valorous Gorja, the 'Spaniard Self-Painted,' and the reviews of bull-baiting in the dialect of the "plaza." The 'Quixote' is not and never can be a text for schools, a model of literary style; its language is too thoroughly tainted, on the one hand, with the lofty hyperbole of the early fiction its author designed to decry, and, on the other, too deeply imbued with the spirit and caste that form so picturesque a background to the national life, complicated as it is by the successive superimpositions of the national history.

Thus provided, the interpreter of our day sits down to his task with the confidence of one who is master of his resources. He may now know more of his hero and of his best work than the contemporaries of that genius did—possibly than that genius himself; just as it is certain the historian of Charles and of Philip may, if he will, be better acquainted with their respective reigns than Sleidan or Sandoval or Cabrera ever was. The archives, the convent, those rich storehouses of correspondence, of pigeonholed secrets, of inconvenient prohibited literature, giving the caricatures, the pasquinades, the true history of things as the people understood them, are now laid bare in an age when the interested parties are all dead, and the living are curious. In the matter of auxiliaries, therefore, the Cervantista of 1885 has at his command a vast collection of biography, bibliography, and exposition illustrating the life, times, works, and death of his founder. The villages of La Mancha have been ransacked in their records; the archives and state papers of Simancas, Valladolid, Madrid, Alcalá, and Seville have poured forth their tardy "Newes from Spaine"; and personages long forgotten in the niches and vaults of convents, churches, and campo santos have had their petty jealousies, feuds, and weaknesses exposed to the public scrutiny. In the midst of it all, Cervantes, the poor hidalgo of a decayed family, stands forth as a big boy of twenty-one, through poverty only just out of school, inaugurating his career by writing album verses for his master in 1568, the year of horrors to Philip; then an *amourette*—a Spanish one—a knife flashed in an officer's face; a sudden departure for Italy under the ægis and *franchise* of a papal commissioner, to shield him from a criminal warrant issued in 1569; next a soldier under Don Juan at Lepanto and Navarino; a captive in Algiers for five long years; the ransom at last, which exhausts the slender store of his widowed mother and the marriage portion of his sisters; his return to an impoverished home, maimed in an unthankful service, to find his great patron dead and the ears of Government dull of hearing; his forced resumption of a soldier's life, still in the ranks, though a veteran; a second *amourette*, this time in Portugal, the effects of which will cling to him as long as he lives, and to his family after he is dead; his first literary work, the 'Galatea' of 1584, and his marriage the same year to a gentlewoman of La Mancha; his struggles for the next twenty years to eke out a precarious livelihood, with an occasional arrest and imprisonment resulting from a soldier's careless financial habits and from a generous provision of bottled ill-luck oozing out from time to time, till the mania for writing seizes him once more and holds him to the last. The 'Don Quixote' (First Part) follows in 1605, the 'Novels' in 1613, the 'Journey to Parnassus' in 1614, the 'Comedias' in 1615, as also the Second Part of 'Don Quixote,' and the 'Persiles y Sigismunda' in 1617, one year after his death—the dedication of which he had written "with one foot in the stirrup," about to start on the long journey whence there is no earthly welcome home.

Such an adventurous life has given us 'Don Quixote'; only such an experience could have evoked the *Novelas*, one of which, half written in the Flash language of Spain, savors of a fragment of personal history. But the details of this gloomy biography have not come down to us by contemporary narration, nor yet through the uncertain gossip of tradition; they have been wrung step by step from long-sought records by the diligent toil of a century and a-half of Spanish scholars, each adding his volume or his contribution, till to-day little that is essential remains to complete our knowledge of the man and his writings. Moran has drawn aside the veil from his escapade into Italy in 1568-9, a datum unfortunately overlooked by Mr. Ormsby, as also that of the Marquis de Molins, who threw open the records of the Convent in the Calle de Cantarranas (now Lope de Vega), where still lie undisturbed the bones of the great author and his singular household—even the Portuguese mother and her daughter Isabel *Saavedra*. The 'Burial Place of Cervantes' is to us one of the saddest of books, only relieved by the charm of the Marquis's flowing style; and these latest developments, interesting as they are, shed no new lustre on the novelist's name. For a decade of years we never passed the Convent of the Trinitarian Sisters in Madrid without feeling a profound respect for the Order that once opened its doors to receive the remains of Miguel de Cervantes and the surviving members of his unhappy family.

CHILDREN'S BOOKS.—IV.

ALL writers, even those of the better class, of stories for the amusement of insatiate boyhood, appear to succumb to the temptation of sacrificing probability to attractiveness. To this rule 'Wakulla: A Story of Adventure in Florida,' by Kirk Monroe (Harper & Bros.), offers no exception. The opening chapters, telling of a sick bank-cashier, who for health's sake leaves New England with his family in search of a warmer clime, are natural enough, but the march of events after the travellers have reached Florida is something most surprising. The energetic and capable doings of the recent invalid cashier are

sufficiently remarkable in themselves to make the story lively and improbable; but these are followed by adventures and developments which are much more extraordinary, not to say incredible. Our best magazines for the young (this story has recently appeared in *Harper's Young People*) seem, however, not to object to just such narratives. We are sometimes disposed to think that children are far too much "amused" in these latter days.

'Silvia's Daughters,' by Florence Scannell (Frederic Warne & Co.), is a little story of some French refugees at the time of the Revolution. It has no force or originality, and is not particularly well written, the action being sometimes too hurried. But it is quiet, natural, and pleasing. There are many illustrations, some of which are very pretty.

This year Miss Alcott contributes to the children's pleasure a volume of short stories, fairy-tales and others, called 'Lulu's Library' (Roberts Bros.). They are ingenious and amusing, and will please little girls very much, even if not quite satisfactory to the maturer critic, who might reasonably object that the ideas are occasionally grouped in mongrel fashion, and that some of the stories are too much like large sugar-plums. Three of them have previously appeared in *St. Nicholas*.

'Those Dreadful Mouse Boys' (Boston: Ginn & Co.) is the appropriately silly title of an incomparably silly book. The author styles herself "Ariel," but the dainty name should go with a daintier fancy. It is not every one who, like Hans Andersen, can transfigure the commonest things with poetic touch; and the result of "Ariel's" attempt to humanize mice, and infuse into their adventures poetry, pathos, morality, and even *religion*, is as disgusting and shocking as it is fatuous. Are story-tellers in league to pervert utterly the taste of the rising generation? That this one calls her book "A Double Story for Young and Old," does not help matters much. The illustrations are poor.

'Rico and Wiseli' (Boston: Cupples, Upham & Co.) contains two charming stories translated from the German of Johanna Spyri (author of 'Heidi') by Louise Brooks. These are tales of peasant life, the scene of one being the country near Berne; of the other, alternately the Upper Engadine, and Peschiera on the Lake of Garda. The translator seems to have done her work excellently; only once in a while does some slightly peculiar expression suggest a shade of carelessness. Each story tells of an orphan child whose sad experience of sorrow, adversity, and hard work is finally brightened by finding a happy home, and both narratives are not only simple and touching, but graceful, sprightly, and delightful as well. A vein of religious trust runs through them, which is full of sweetness untouched by bigotry.

We venture to class Mr. W. H. Beard's 'Humor in Animals: a Series of Studies with Pen and Pencil' (Putnams) among children's books, because adults will, we fear, find rather depressing the reasoning by which the author seeks to establish his thesis. To this thesis, by the way, we have not the slightest objection, but the difficulties are of course very great in proving that the actions of animals which have a droll effect on human observers had a humorous motive. Sport in a great variety of animals, and the love of mischief in a few, even the sense of shame in some, are sure indications that the brute creation has a sense of the ridiculous akin to that which man possesses. Want of literary dexterity, and a desire to argue the sense of humor in as many creatures as his pencil can make laughable, have caused Mr. Beard to labor unnecessarily. Several of his anecdotes are pointless, but enough remain which are very entertaining without regard to their bearing on his theme, and the book improves as it goes on. The pictures are capital and will furnish amusement to young and old. The title-page deserves special commendation, and while the tail-piece counterfeits "Br. Rabbit" to the life, the portrait of "ole Br. Tarrypin" on page 103 would draw tears of admiration from Uncle Remus himself. The book is very handsomely printed.

We can welcome the reprint of Ruskin's 'King of the Golden River' (John Wiley & Sons) for its own sake and for "Dicky Doyle's" illustrations, yet these rather because they are Doyle's than because they are his best. The suggestion of a rain-storm, on p. 29, has more mastery in it than any of the others.

Neither is Randolph Caldecott at his best in his designs for the late Mrs. Ewing's 'Lob Lie-by-the-Fire' (E. & J. B. Young & Co.); but they add to the attractiveness of this well-told and interesting story, humorous and pathetic by turns, with the author's moral vein felt rather than seen.

In harmony with the foregoing, but a larger and more elegant book, is the collection of stories and poems called 'In a Good Cause' (E. & J. B. Young & Co.), issued in behalf of a London charity for children. It ranges from Herodotus (paraphrased in "Pharaoh Rhampsinitus and his Mason") to Oscar Wilde, Andrew Lang, F. Anstey, and Bernard Quaritch. The illustrations are numerous and very good.

A careful collection of nursery rhymes and infant prose, prettily got up, is 'Sugar and Spice, and All that's Nice' (Roberts Bros.), in which we must not forget to remark the "index to first lines"—a rare condescension to this age. The cuts have been taken from Oscar Pletsch, Kate Greenaway, John Tenniel, and many other artists.

For children of varying ages Mary J. Morrison (who is styled "Jenny Wallace" on the title-page, and "Jenny Wallis" elsewhere) has compiled on a larger and more showy scale 'Songs and Rhymes for the Little Ones' (Putnams). American authors have, with few exceptions, been drawn upon, and of these the book is fairly representative. Two sets of borders in successive colors frame in the text; and here, too, we have an index of first lines, besides one of titles.

There is novelty, some good drawing, and refined verse in 'Tiles from Dame Marjorie's Chimney Corner, and China from her Cupboard' (E. & J. B. Young & Co.). The prevailing tint of tiles and china is naturally blue. The days of the week and their duties, the seasons, and holidays furnish topics for the unpretentious rhymes.

A certain appositeness in the case of "the Silent Man" marks the telling of the life of Grant in words of one syllable—'Our Hero, General U. S. Grant,' etc., by Josephine Pollard (McLoughlin Bros.). "It is not a book for girls at all," the writer warns those unfortunates; "they will not care for it." But why should they be thought indifferent to a book which aims to "teach the least one of the small boys to fear God—to do right—to speak the truth—to love peace—and to be brave and true through and through"? May little girls not have such aspirations?

A Handy Anglo-Saxon Dictionary: Based on Groschopp's Grein, edited, revised, and corrected, with Grammatical Appendix, list of Irregular Verbs, and brief etymological features. By James A. Harrison, Professor of English in Washington and Lee University; and W. M. Baskervill, Professor of English in Vanderbilt University. A. S. Barnes & Co. 1885.

The 'Handy Anglo-Saxon Dictionary' of Professors Harrison and Baskervill meets a real want. The few explorers who pushed their way into this field could until lately manage to pick up copies of Bosworth or Lye; but now that there are classes in Anglo-Saxon in all the good colleges, it is impossible to supply them even with these old and incomplete and misleading helps. We have good primers and readers, and, thanks to Professors Harrison and Baskervill, and Professor Hunt, of Princeton, a couple of poems with sufficient vocabularies; but for extended reading a dictionary is needed. There is, to be sure, a new dictionary in preparation, of which two parts have appeared from the Clarendon Press, but it will be long before it is finished, and it is too costly for common class use. There is also a noble work by Grein, a complete vocabulary of the Anglo-Saxon poetry, so minute in its definitions and so complete in its forms and illustrative quotations as to be nearly a concordance of the whole poetry. This is now out of print, and the preparations for reprinting are slow. Meantime the German publishers have had an abridgment made, giving the words and definitions without the illustrative quotations. This abridgment has been done into English by Professors Harrison and Baskervill, and very well done. They have not merely translated the German definitions, but have worked the matter up by the help of other vocabularies and original work on some of the texts. They have thus been able to correct mistakes and add new definitions. They have also increased the value of the book very much for class work by preparing it for etymological study; cognate words in other languages are given, especially in German and English, and compounds are separated into their elements. Moreover, they have added a very complete outline of the formal part of the grammar. The table of irregular verbs is exactly suited to use with the vocabulary. It is in alphabetical order, and each verb is marked with its class.

The rest of the grammar seems to have been conceived on a different plane. The pronunciation is sometimes given in phonetic technicalities without definition or illustration; that of *c* and *g*, for example. The paradigms of the substantive are very numerous, but the arrangement is not simple, and there are no reference figures in the vocabulary. The simplest arrangement is the alphabetic order of stems used by March and Sievers; *a*, *ā*, *i*, *u*. Professor Baskervill adopts the general principle, but his failure to separate *ā*-stems from *a*-stems results in a series of paradigms almost as heterogeneous as the gender arrangements of Grimm and Sweet. The general classification of the verbs is excellent, but the strong alphabetic order is not carried out in the subdivisions of the *a*-roots, though it has been made familiar to our scholars by its use in the exhaustive papers on the ablaut presented to the American Philological Association by Doctor Wells, of Providence, 1882-1885.

Such matters will not much trouble the workers with the 'Handy Dictionary.' There is one thing that will: it is a dictionary only of the poems in Anglo-Saxon. How are they to read the prose? It is to be hoped that Professors Harrison and Baskervill, who have done so much for this department of study, will soon give us an enlarged edition, which shall contain the vocabulary of the current prose.

The Oldest School in America. An Oration by Phillips Brooks, D.D., and a Poem by Robert Grant, April 23, 1885. Boston: Houghton, Mifflin & Co.

The Boston Latin School attained this year the venerable antiquity of two centuries and a half, and the occasion was improved by a celebration of which we have here a full account. The story of the rise of the School, of its successive mas-

ters and houses, and of its importance to liberal education in Massachusetts, is twice told, in prose and in verse. Doctor Brooks's review is graceful and genial, and is marked by some excellent characterizations, particularly of the late Master Gardner, who could have wished no better epitaph. The orator did not fail to emphasize the close relations which have ever existed between the Boston Latin School and its younger sister Harvard College. In return for an almost unbroken series of Harvard graduates as masters, the School has continued to supply the College with an annual contingent ranking among the foremost in scholarly discipline and ability. Doctor Brooks further laid a proper stress on the original democratic constitution of the School:

"It was the town's only school till 1682. Side by side on its humble benches sat the son of the Governor and the son of the fisherman, each free to take the best that he could grasp. The highest learning was declared to be no privilege of an aristocratic class, but the portion of any boy in town who had the soul to desire it and the brain to appropriate it."

Neither orator nor poet, however, noticed the great change which has taken place since Doctor Brooks's pupilage in the social standing of the School. Thirty years ago it was still natural, though no longer the rule, for the wealth and respectability of Boston to send their sons to the Latin School rather than to a private classical school. Old graduates belonging to "the upper ten thousand" had the same feeling toward it that college graduates have toward their alma mater:

"Où le père a passé, passera bien l'enfant."

To-day, as long since, if we are not greatly mistaken, the case is quite otherwise. Beacon Street (to use a significant local expression) no longer sends its sons to the Latin School, whether on sentimental or on any other grounds, although in the meantime the School has been endowed with the finest building of its kind in the world.

A corresponding change has taken place in the patronage of the grammar schools in the same city, directly traceable to the influx of the Irish population in the thirties and forties. The homogeneousness of religion, morals, customs, and worldly condition was rudely invaded, and the public schools lost their hold on the civic pride, the republican idealism, and the confidence of parents. Families of moderate means had no alternative; the well-to-do resorted to the private school. Of even date was the beginning of the political revolution which has ended in giving Boston a Mayor of Irish birth. The first Mayor of the city, the father of Wendell Phillips, was a Harvard graduate, and so were eight of his nine successors in thirty years. After 1850, in thirty years there were but two Harvard graduates, and the majority had no liberal education. In 1852 the Whig party went to pieces on the slavery issue, and the mischievous whirlwind of Knownothingism a few years later completed the political burial of "respectability" in Massachusetts. From that moment the historical continuity of Puritan, Revolutionary, and Federal Boston ceased. Society was divided, the middle classes first and then the lower classes came to the top, and now it is a problem how long forms and institutions will avail against the forces at work to make Boston equally unrecognizable by Cotton Mather, Benjamin Franklin, Harrison Gray Otis, and Edward Everett. That the Latin School could escape these influences was not to be expected; yet the city's money is still freely bestowed on it, and, as we have remarked, this changeful period has worked only to its advantage in respect to its local habitation and equipment.

History of Manon Lescaut and of the Chevalier des Grieux. By the Abbé Prévost, with a preface by Guy de Maupassant. Illustrated by Maurice Leloir. George Routledge & Sons. 1886. Pp. xxiv, 208.

'MANON LESCAUT' is one of the well-known books—at least in France, where everybody is supposed to be familiar with it, and ready to seize the least allusion to its contents. It is of the class of improper books which are not given to read to young people, in our day, because of the lives of the heroine and the hero, which are as degraded as can well be imagined—mercenary and wanton on the one side, insanely abandoned on the other. But it has no such freedom of description and *mise-en-scène* as 'Tom Jones' and 'Roderick Random,' which, nevertheless, are not excluded from our libraries as immoral. The French original being so guarded in manner, literal translation has not been impracticable, and the one before us seems to be faithful. Who has made it we are not told, although the page behind the title gives the names of the artist, both engravers, printers of text and plates, and maker of the ink. It is a curious custom that seems to be growing, this of ignoring the translator altogether. It is to be seen especially in journals devoted to study and research, where it is common to print articles by well-known writers, but in languages of which they have not the mastery. The translator is regarded as the private secretary or amanuensis whose toil is rewarded but not acknowledged.

The illustrations are very numerous—more than two hundred wood-cut vignettes at the heads of the pages, with graceful arabesques forming partial frames to the text, and twelve full-page engravings. Those who know Mr. Leloir's work—careful, skilful, watchful of incident, character, costume, and surroundings, but with very little *verve*, very little suggestion or force—will know what these are, in the main. Moreover, the book is a seemingly exact reproduction of the French publication, and that is a book in very many respects similar to the 'Voyage Sentimental' published the previous year. It may be added that the illustrations seem to have lost nothing in this English edition: they are even a little more delicate than in the French one. In all respects the get-up of this work is very handsome.

BOOKS OF THE WEEK.

Fine Arts.

THE AUTUMN ACADEMY.

THE more we are interested in, and the more we hope for, the progress of American art, the more essential it is that we should have no illusions as to its present status, and it is therefore well to confess in all soberness that the present Academy exhibition is not a good exhibition; that, indeed, viewed from the standpoint of serious art, it is an exceedingly bad one. With almost the single exception of Mr. Inness's pictures, it contains no work of very great merit, and it contains a vast deal of work, unlearned and untrained, that hardly rises to the level of intelligent amateurism.

It is quite natural, and perhaps, on the whole, quite right, that many of the best places in the exhibition should be occupied by the works of the Academicians, and it is an ungracious task to point out the shortcomings of these no doubt estimable and well-intentioned gentlemen; but the plain fact is that, from no fault of their own, most of them have never gained any real knowledge of painting. Such pictures as Mr. J. H. Beard's "It is very queer, isn't it?" Mr. T. W. Wood's "Grinding at the Mill," Mr. Cropsey's landscapes, with their startling combinations of red and green, even Mr. J. G. Brown's much better "Decorative Art," can only be considered by the serious critic as the well-meant productions of amateurs. Much better than these, because of its seriousness of aim, is Mr. Winslow Homer's "Herring Net." Mr. Homer has done some work, especially in water-color, for which every lover of true art should be thankful, and his pictures are always deserving of the most respectful attention; but it is nevertheless true that his technical achievement in oil is small, and that the present work is unpleasant in color and weak in drawing. Besides these men, whom we only reproach with feebleness, there are others, such as Messrs. De Haas and Thomas Moran, to whom we make the much graver reproach of falsely directed cleverness. Mr. Moran's work, in especial, is very clever and altogether false and theatrical, and no painter we know of could exercise a worse influence upon his admirers. But there is one of our elder painters for whom we have nothing but admiration and respect. George Inness has four pictures in the exhibition, and at least three of these are better than any other man's work to be seen there. Between the old generation, who cannot paint, and the younger, who, too frequently, cannot do anything else, Mr. Inness holds a position almost alone—that of a painter of great technical achievement who is yet preëminently an artist. Where he more especially falls short of the great French landscape painters is in his lack of feeling for form and style. His composition is often ragged and without dignity of mass or line, and his foregrounds, as in the "Pastoral Landscape" here, are apt to be vague and unsubstantial; but these faults are largely compensated by a depth of poetic temperament and a passionate color-sense that place him high among the landscape painters of the world. In his "Nantucket Moor" there is an almost unsurpassable sunset sky.

Most of the better known among the younger painters—those who make the strength of the Society of American Artists—never send to the Academy now; but every year brings new recruits, and the most encouraging thing about the present exhibition is the number of excellent

studies by comparatively unknown men. They hardly paint pictures as yet—most of them—but they have sent here a number of portraits, study-heads, etc., which show by their mere numbers, and in spite of some faults, that there is a large and constantly increasing amount of painterlike ability in the country. It is all welcome, and when we have still more of it the creative genius will come; what we first need is a foundation of knowledge. Among the best of the works of this class are three portraits by Wilson De Meza, Irving R. Wiles, and J. R. Strickler. There is good painting in all three of them, which would be more promising if it were not for a certain air of definite accomplishment, as if they were satisfied with a method adopted from a master and need search no further. Mr. De Meza's is perhaps the most promising of the three, but it is unfortunate that the head is not as well painted as the rest of his canvas, which is very clever indeed.

Another promising picture by a young man is Mr. Otto H. Bacher's "Richfield Centre." Mr. Bacher is already well known as an etcher, but this picture shows that he has the stuff of a painter in him as well. It is unequal, and the figures in the foreground and the horse of the passing milk-cart are insufficient in drawing, the latter enough so to give a comic air to the picture which may blind the careless observer to its real merit; yet this merit is very great. All the middle distance and background—this sleepy country town, with its church and "store," bathed in white sunlight—is painted with a truth of observation and justness of impression quite unequalled, in its way, by anything else in the Academy.

Two or three other things may be spoken of in this connection, such as "La Mère Marie," by Carl Hirschberg, "Jeanne," by J. Harison, and "A Dutch Fisher Girl," by Wm. J. Baer, which are all good, unpretending studies of heads, though the last two are somewhat blackish in color. Margaret W. Leslie has a portrait, presumably of herself, which also shows workmanlike qualities, but in which there is a little too much dependence upon bitumen. Mr. Frank R. Green has a fairly good study which he has tried to dignify by entitling it "Dreams of the Past," and Mr. Coffin a nicely painted study of a woman seated in the grass, the landscape of which is not, however, as good as the figure.

There is a group of our younger painters who, following in the track of Mr. Ulrich, are devoting themselves to extreme finish. The most notable of these here represented are Louis Moeller, with "A Moment's Rest," which is of a very unpleasant blue color almost throughout; G. W. Brenneman, with "Family Relics," very good in its way; and Charles X. Harris, with "The Mowers." There is much hard and serious work in these pictures, but we cannot but think it in large part wasted The search for mere detail is a false direction in art, and it is to be lamented that it should be so much in vogue at present as to discourage a larger method in men who are capable of it.

In landscape, with the exception of Mr. Inness's work, already mentioned, there is little of importance. Mr. Edward Gay's "Washed by the Sea" is given undeserved prominence by its size and its occupation of the place of honor, for its intrinsic qualities hardly rise above honorable mediocrity. Messrs. Murphy and Crane send slight variations on their well-known themes, and Mr. Bliss Baker has here the most crude and spotty picture we have yet seen from him. Mr. John R. Stites's "Late Autumn" is a piece of good, honest work, but uncomfortably blackish in tone. Curious and interesting in their way are three little pictures, hung side by side in the corridor, painted by Messrs. Henry P. Smith, R. C. Minor, and R. A. Blakelock, and noticeable for their external resemblance to the "old masters" of modern landscape art.

A very good architectural study, without much pictorial pretension, is "Bronze Horses of St. Mark's," by Charles C. Coleman, in which the effect of the patches of gilt on the green bronze is excellently rendered, and the painting of all the architectural detail in bright pure color is very satisfactory. As a study its greatest fault is a slight lack of atmosphere. Similar, but not quite so good, is "A Rainy Day in the Piazzetta," by William Graham.

Other pictures which hardly fit into any of these categories are worthy of mention for their superiority to the mass around them. "Youth," by Geo. C. Lambdin, is a repetition of his water-color of last year. The figure is pretty in sentiment, but dry, and the landscape is not sufficiently interesting for the space it occupies. The figure would be more telling on a smaller canvas. "The New Purchase," by Francis C. Jones, is the work of a man of talent who should do better. The figures are not sufficiently well drawn, and the blue-and-green iridescence of color is distressing to the eye. Mr. Robert Koehler, in "The Forge," gives us a very true color impression; and if the figures were better drawn, there would be little to ask for. At any rate, they are small and unimportant. "Scherzo," by F. W. Freer, is clever and pretty, but it is a pity he did not take the pains to put something more behind his figure than a conventional "background." E. M. Ward's "Grandmother Spinning" is a piece of serious work, but is hard and colorless. Mr. Bridgman's "Horse Dealers" is, though rather hard and small in manner, far above the average of his present work, and in refreshing contrast with the tricky cleverness of his other two contributions. If Mr. Bridgman always did as well as this, we should have little to complain of. "Yearling Heifers," by Carlton Wiggins, shows the influence of Van Marcke, and is fairly good. "Mending his Ways," by Alfred Kappes, has good qualities, but is surely too pale, the lights upon the black skin being almost pure white. Mr. Millet's "Potter's Daughter" does not do him justice. Of course it shows a certain training, but is somewhat perfunctory—a picture for the public and not for artists. Mr. C. Y. Turner is somewhat unhappy in his "Portrait." Neither in size nor tone is there any proportion between the young lady and the rest of the picture. Mr. Church has one of his singular formless and almost colorless compositions, which nevertheless always have an indefinable charm, and Percy and Leon Moran have two of the sparkling frivolities for which they are known.

It is highly improbable that this list contains all that is worthy of notice, but it is impossible to search further for the rare exceptions among works which, we repeat, whether by beginners or men of reputation, for the most part hardly rise above amateurism.

A cheaper edition of that beautiful standard work, VON FALKE'S GREECE AND ROME, from the original plates, and with all the original illustrations, is now ready. Price $10. HENRY HOLT & CO., Publishers.

Of Special Interest to Admirers of Richard Doyle.

A Journal Kept by Dick Doyle in the Year 1840.

Illustrated with several hundred sketches by the author. With an Introduction by J. Hungerford Pollen, and a Portrait. Demy 4to, $7 50.

*** The Journal has been reproduced in facsimile, and is printed on fine paper. It is handsomely bound in cloth, and forms a very elegant gift-book.

"There are few books of this season likely to please the general reader more than 'Dick Doyle's Journal' (Smith & Elder). It is a facsimile of the journal which Richard Doyle, then a boy of about fifteen, wrote and illustrated during the eventful year 1840, and is edited by Mr. Hungerford Pollen, the artist's friend."—*Athenæum.*

"Here cunning youthful fingers trace
A scene, a show, a well-known place,
A character, a form, a face,
With quaint remark diurnal;
What graceful fancy and what heart!
What truth, what humor, and what Art!
And all that Genius can impart,
We find in 'Dick Doyle's Journal'!"
—*Punch.*

"A volume of exceptional interest and value. . . . 'This Journal will please both old and young."—*Globe.*

Charles Scribner's Sons'

New Books for the Holidays.

Valentino.

BY WILLIAM WALDORF ASTOR.

1 VOL., 12MO, HANDSOMELY BOUND, $2.00.

"The style of the book is unaffected and musical. The descriptions are vivid, and the dialogue is interesting. . . . Incidents are presented with dramatic art. The movement of the story never drags. The actors are natural and interesting, and the accessories are highly picturesque. The views of a strangely debased society, splendid in its luxuries and savage in its brutalities—a society which loved everything beautiful except virtue, and filled the palaces of the great with poets, painters, prisoners, and bravos—are extremely effective."—*New York Tribune.*

Tiryns:

THE PREHISTORIC PALACE OF THE KINGS OF TIRYNS. THE RESULTS OF THE LATEST EXCAVATIONS. By Dr. Henry Schliemann, author of 'Mycenæ,' 'Ilios,' etc. The preface by Prof. F. Adler, and contributions by Dr. William Dorpfeld. With 188 woodcuts, 24 plates in chromo-lithography, 1 map and 4 plans. 1 vol., royal 8vo, superbly bound, $10.

"The best, most interesting, and most important of Dr. Schliemann's works."—*Hon. Eugene Schuyler.*

Two Years in the Jungle.

The experience of a hunter and naturalist in India, Ceylon, and the Malay Peninsula, and Borneo. By WILLIAM T. HORNADAY. 1 vol., 8vo, with maps and illustrations, $4.

"Since the visit of Mr. A. R. Wallace to the Malay Archipelago no such important addition has been made to the data of natural history as is embodied in this record of exact and ample observation in a seldom penetrated field."—*New York Sun.*

THE NEW ILLUSTRATED

Rudder Grange.

By FRANK R. STOCKTON. New illustrated by A. B. FROST. 1 vol., 12mo, $2.

This edition of Mr. Stockton's famous book, prepared for the holidays, contains nearly 100 new illustrations by Mr. A. B. Frost, who admirably supplements the author's quaint humor by pictures which are in themselves intensely funny. No more attractive book can be found by holiday buyers.

Bric-a-Brac Stories.

By Mrs. BURTON HARRISON. Illustrated by WALTER CRANE. 1 vol., 12mo. $2.

'Few volumes will receive a warmer welcome from children. . . . It is praise enough for Mr. Crane's illustrations to say that they harmonize with the stories. We confess to have been beguiled by the book into a forgetfulness of time, cares, and pretty much everything for two consecutive hours."—*Christian Intelligencer.*

Stories by American Authors.

"Cabinet Edition." 10 vols., beautifully bound, gilt top. In a box. $7.50.

This fine edition has been made necessary by the repeatedly expressed demand for this standard collection of American short stories in a form suitable for preservation on the library shelf or for gifts.

Marvels of Animal Life.

By C. F. HOLDER. Illustrated. 1 vol., 12mo. $2.

"The author brings together the results of the most anxious studies, and if they were not supported by the best scientific testimony they would appear incredible. . . . We commend this volume to readers who are interested in natural history studies, young and old alike."—*Boston Transcript.*

THE NEW ZIGZAG.

Zigzag Journeys in the Levant.

By H. BUTTERWORTH. An account of a tour of the Zigzag Club through Egypt and the Holy Land, including a trip up the Nile and visit to the ruins of Thebes, Memphis, etc. With 200 new and appropriate illustrations. 1 vol., small quarto, illuminated covers and linings, $1.75; cloth, bevelled and gilt, $2.25.

Three Vassar Girls in Italy.

By LIZZIE W. CHAMPNEY. The Vassar Girls in this volume spend the summer in travelling through the vineyards of Italy, visiting all the large cities, and passing some time in Rome, in the Vatican, the Catacombs, etc. Illustrated by Champ and others. 1 vol., small quarto, illuminated board covers and linings, $1.50; cloth, bevelled and gilt, $2.00.

Chatterbox for 1885.

The Genuine Chatterbox contains a great variety of original stories, sketches, and poems for the young, and every illustration which appears in it is expressly designed for this work, by the most eminent English artists. Over 200 full-page original illustrations. 1 vol., illuminated board covers, $1.25; cloth, black and gold stamps, $1.75; cloth, extra, chromo, gilt side and edges, $2.25.

Four Feet, Two Feet, and No Feet.

Edited by LAURA E. RICHARDS. Animated Nature for the youngest readers, including stories of domestic pets, descriptions of strange and curious animals, their dwellings and habits. 250 illustrations. 1 vol., quarto, illuminated board covers and linings, $1.75; cloth, bevel and gilt, $2.50.

For sale by all booksellers; or sent, post-paid, on receipt of price by the Publishers,

ESTES & LAURIAT, Boston, Mass.

"A Work of Historic Importance."

The Peace of Utrecht and the Principal Events of the War of the "Spanish Succession."

BY

JAMES W. GERARD.

8vo, cloth, extra, $3 00.

"It is not only a History of the Peace, but a complete presentation of the European Policy which culminated in that event, and which settled so many contending interests. Mr. Gerard's work is a most interesting and valuable contribution to historical literature."—*St. John's Globe.*

"Mr. Gerard's treatment of the subject is broad and able, and his volume an important contribution to historical literature."—*Observer.*

"The present exhaustive treatment of one of the most important events of the eighteenth century is an invaluable contribution to history."—*Minneapolis Tribune.*

"The book is at once a credit and an honor to the author and its publishers."—*Baltimore American.*

"The brilliant moves of the great diplomatists as they played their world historic matches, the long conflict between the allied powers, and the *Grand Monarque* in which their armies swayed backward and forward; altering the map of Europe at every campaign; the dogged perseverance of the Hollanders; and the vacillating policy of the English, are all comprehensively treated by the author."—*N. Y. Commercial Advertiser.*

"Mr. Gerard has opened up a mine of historical wealth which will be a revelation to many who have been accustomed to regard themselves as thoroughly acquainted with the subject."—*Detroit Free Press.*

"The author has made a study of the momentous events leading up to that famous compact, and the result is a narrative quite as romantic as a tale of fiction, and in every way as entertaining."—*Chicago Herald.*

G. P. Putnam's Sons,

New York and London.

Sibley's Harvard Graduates

Biographical Sketches

OF

Graduates of the Academic Department

Of Harvard University.

By John Langdon Sibley, A.M.

The work was not stereotyped, and the edition has been limited by the subscriptions. The few copies uncalled for are for sale by

MACMILLAN & Co.'s NEW BOOKS.

For the Library and for Holiday Presents.

A NEW BOOK BY LORD TENNYSON.

TIRESIAS: and Other Poems.

By Alfred Lord Tennyson, Poet Laureate. F'cap 8vo, $1.50.

REVISED AND ENLARGED EDITION.

The Tennyson Birthday Book.

Edited by Emily Shakespear. 75 cents. ASK FOR MACMILLAN'S AUTHOR'S EDITION.

NEW EDITION IN ONE VOLUME.

Marius the Epicurean.

His Sensations and Ideas. By Walter Pater, M.A. One volume. 12mo. $2.25.

"A style of perfectly finished beauty, full of an exquisite restraint, and, after all, only the fitting and adequate expression of the exactest thinking. . . . As we read the pages characterized by such unfailing fitness of phrase, finished from their first to their final line with a flawless perfection which one demands in the brief lyric of a master but hardly looks for in a prose work of extended length, we find far more than the justifaction of the author's long cessation from slighter literary efforts—a continued silence which has been felt at least by some lovers of sweet and sifted English, as nothing less than real personal loss."—*The Academy.*

"In this picture, touching the sweet charities of home, we see the Pagan boy at his best, in no way a stranger to what we are apt to think the gift of a later religion and a later civilization. Follow this youth under the exquisite influences of his mother, assent with the author that 'maternity itself is the central type of all love,' richest with 'its unfailing pity and protectiveness,' and once touched by the pensive note and attuned to the minor music, sensitive to the exquisite modulation of Mr. Pater's style, you who follow him through some five hundred pages of the most alluring reading that the literature of our day has given to us. . . . It is not often that a book so rich in historical interest, so profoundly touching in its personal character, comes before the reader, and yet it will escape him unless his mind, and life, and temperament are nicely adjusted and in harmonious relationship to judge the finest things of this word, and to enjoy an urbane, an artistic, a conscientious treatment of them."—*Eugene Benson, in N. Y. Commercial Advertiser.*

THE FINE ART BOOK OF THE SEASON. Uniform with the "Graphic Arts."

Landscape.

By Philip Gilbert Hamerton, author of 'Etching and Etchers,' 'The Graphic Arts,' etc , etc. With about fifty illustrations. Columbier 8vo. Price, $35; large-paper copies, with proofs of the illustrations and bound in vellum, $70.

"In complete artistic quality, no book illustration of the day equals them. They are, as the preface asserts, at the high-water mark of what can be done in this vein."—*Nation.*

"The superb volume before us may be said to represent illustration, decoration, typography, and taste in binding at their best, employed in a work devoted to the fine arts exclusively."—*Athenæum.*

NEW ILLUSTRATED BOOKS.

Windsor.

By the Rev. W. J. Loftie. With twelve full-page etchings and numerous minor Illustrations. Imperial 4to, cloth, gilt, $7.50.

"Pen and pencil have combined to render the volume one rarely attractive. It is illustrated with a dozen splendid full-page plates and numerous vignettes by well-kown artists. . . . The many views of the castle and of parts of it are of interest both artistically and historically, and the whole work is one of the highest merit."—*Boston Courier.*

Isis and Thamesis.

Hours on the River from Oxford to Henley. By Alfred J. Church, M.A. With twelve plates and numerous vignettes. Imperial 8vo, cloth, gilt, $6.

"The series of them, taken together, is of wonderful interest. . . . This very agreeable book."—*N. Y. Nation.*

"A beautiful book for holiday uses. . . . The idea of describing the river with the villages upon its banks, the classic associations which cluster about Oxford, and all the vivid life which in craft of varied sort flits over the water, is in itself admirable, and it is finely carried out. There is something irresistibly charming in following the author along the pleasant water ways, and simply to look at the pictures of 'Isis and Thamesis' is almost like reading anew 'Tom Brown at Oxford.'"—*Boston Courier.*

NEW ILLUSTRATED HOLIDAY EDITION.

Water Babies.

A Fairy Tale for a Land Baby. By Charles Kingsley. New Edition with One Hundred Illustrations by Linley Sambourne. Small 4to, cloth, extra gilt, $4.

"It was an inspiration to set Linley Sambourne at illustrating Charles Kingsley's paragon of fairy stories, 'The Water Babies.' . . . Kingsley's beautiful expression of his love for children and his splendid power to amuse and direct them receives a perfect and most artistic setting, and happy the child that shall by this means form acquaintance with a true and faithful friend. The richly ornamented cover is in keeping with the handsome paper and typographical feature of this book."—*N. Y. Commercial Advertiser.*

"The delightful adventures of poor Tom, the chimney sweep, above water and below, are accompanied by Linley Sambourne's 'Very individual Sketches.'"—*N. Y. Times.*

STANDARD WORKS IN SETS.

Tennyson.

MACMILLAN & CO., 112 Fourth Avenue, New York.

The Nation

VOL. XLI.—NO. 1069 THURSDAY, DECEMBER 24, 1885 PRICE 10 CENTS

Scribner & Welford's
NEW BOOKS.

GOLDSMITH'S
Vicar of Wakefield:
BEING A FACSIMILE OF THE FIRST EDITION,
PUBLISHED IN 1766 BY FRANCIS NEWBERRY.

With a Preface by AUSTIN DOBSON, and a Bibliographical List of all the known English editions, and of Translations into Foreign Languages. 2 vols. fcp. 8vo, in paper boards, with printed label, price $5 00.

The *facsimile* is accompanied by an interesting preface by Mr. Austin Dobson, in which the history of the writing and publication of the book is told, and also the seriously comic circumstances under which the MS. was brought to light and disposed of by Dr. Johnson, to the relief of his much harassed friend. Following the preface is a Bibliography of the "Vicar," which it is believed is the first complete Bibliography of the work that has been attempted.

Of Special Interest to Admirers of Richard Doyle:

A Journal Kept by Dick Doyle in the Year 1840.

Illustrated with several hundred sketches by the author. With an Introduction by J. Hungerford Pollen, and a Portrait. Demy 4to, $7 50.

*** The Journal has been reproduced in facsimile, and is printed on fine paper. It is handsomely bound in cloth, and forms a very elegant gift-book.

"There are few books of this season likely to please the general reader more than Dick Doyle's Journal.' It is a facsimile of the journal which Richard Doyle, then a boy of about fifteen, wrote and illustrated during the eventful year 1840, and is edited by Mr. Hungerford Pollen, the artist's friend."—*Athenæum.*

"Here cunning youthful fingers trace
A scene, a show, a well-known place.
A character, a form, a face,
With quaint remark diurnal;
What graceful fancy and what heart!
What truth, what humor, and what Art!
And all that Genius can impart,
We find in 'Dick Doyle's Journal'!"
—*Punch.*

"A volume of exceptional interest and value. . . . This Journal will please both old and young."—*Globe.*

New Volume of the Ideal Series:

Firdausi in Exile, and Other Poems.

By EDMUND GOSSE. 12mo, cloth, gilt top, $2 40.

An Elegant and Choicely Illustrated Edition of

TRAVELS INTO SEVERAL REmote Nations of the World by Lemuel Gulliver, first a Surgeon and then a Captain of Several Ships. By JONATHAN SWIFT, Dean of St. Patrick. With Prefatory Memoir by George Saintsbury, and 180 Colored and 60 Plain Illustrations. Royal 8vo, cloth extra, $5 00.

This edition of a famous English Classic has been produced at very great expense, the colored as well as the plain illustrations having been produced and printed in Paris, and the letter-press in Edinburgh.

MEMOIRS OF THE LIFE OF Colonel Hutchinson. By his Widow, LUCY. Revised and Edited by CHARLES H. FIRTH, M.A. With 10 Etched Portraits. In two volumes, fine paper, gilt top, medium 8vo, and handsome binding, $12 00.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. NEW HOLIDAY CATALOGUE OF CHOICE BOOKS READY. New Musical Catalogue ready.*

SCRIBNER & WELFORD, 743-745 Broadway, N. Y.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

Tiryns:

The Prehistoric Palace of the Kings of Tiryns. The Results of the Latest Excavations. By Dr. Henry Schliemann, author of 'Mycenæ,' 'Ilios,' etc. The preface by Prof. F. Adler, and contributions by Dr. William Dorpfeld. With 188 woodcuts, 24 plates in chromo-lithography, 1 map, and 4 plans. 1 vol., royal 8vo, superbly bound, $10.

"The best, most interesting, and most important of Dr. Schliemann's works."—*Hon. Eugene Schuyler.*

Valentino.

BY WILLIAM WALDORF ASTOR.

1 vol., 12mo, handsomely bound, $2.

"There is a due balancing of livelier and graver scenes, several surprises are neatly managed, and the whole effect is that of a drama cast in the mould of a novel. As a piece of local scene painting, it satisfies the requirements of art. The author has caught the vital spirit of Rome, and it lives in his pages as in those of Hawthorne."—*N. Y. Journal of Commerce.*

THE GREEK ISLANDS AND Turkey after the War. By HENRY M. FIELD, D. D., author of 'Egypt to Japan,' 'Among the Holy Hills,' &c. 1 vol., 12mo, with maps and illustrations, $1 50.

From a letter from Dr. Howard Crosby:

"It fully sustains the high reputation which the author has won from his preceding books of travel. I believe that the verdict of posterity will put Dr. Field's name first in the list of American travel writers. His graceful style, his thorough mastery of language, his graphic picturing, his historical and political references to his sound conclusions, make most fascinating and instructive reading."

TWO YEARS IN A JUNGLE. The experience of a hunter and naturalist in India, Ceylon and the Malay Peninsula, and Borneo. By WILLIAM T. HORNADAY. 1 vol., 8vo, with maps and illustrations, $4.

"Since the visit of Mr. A. R. Wallace to the Malay Archipelago no such important addition has been made to the data of natural history as is embodied in this record of exact and ample observation in a seldom penetrated field."—*New York Sun.*

STORIES BY AMERICAN AUthors. "Cabinet Edition." 10 vols., beautifully bound, gilt top. In a box. $7 50.

This fine edition has been made necessary by the repeatedly expressed demand for this standard collection of American short stories in a form suitable for preservation on the library shelf or for gifts.

MARVELS OF ANIMAL LIFE. By C. F. HOLDER. Illustrated. 1 vol., 12mo, $2.

"The author brings together the results of the most anxious studies, and if they were not supported by the best scientific testimony they would appear incredible. . . . We commend this volume to readers who are interested in natural history studies, young and old alike."—*Boston Transcript.*

BAKER'S

Breakfast Cocoa.

Warranted *absolutely pure Cocoa,* from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

EYES Fitted with proper Glasses. Field, Marine, and Opera Glasses, Telescopes, Micro scopes, Acoustic Cane for Deafness, Ear Cornets, etc. H. WALDSTEIN, Optician, 41 Union Square, New York Catalogues by enclosing stamp. Established 1840

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with all physicians who treat mental or nervous disorders.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion, refreshes weakened vital powers in old or young.

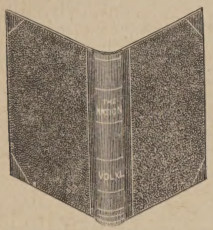
It is used by Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

For convenience of subscribers wisbing to permanently and uniformly bind their volumes, we can now furnish

Covers for the Nation,

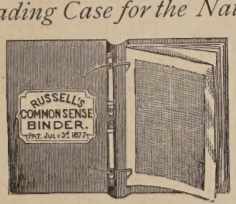


In regular book form, ready for use by any bookbinder. These have black cloth sides, roan back and corners, and are stamped in gold on back *The Nation* and the number of the volume. Price 60 cents each, post-paid.

These covers will fit all volumes from XXXIII. to XL., *i. e.* since the increase in size to 24 pages each issue. (For the earlier volumes we cannot furnish covers.) In ordering state the volume-number wanted.

Address Publisher of the *Nation*, Box 794, New York.

Reading Case for the Nation,



To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, post-paid, on receipt of $1.

The Winter Resort of the South.

Send for descriptive pamphlet. H. PHOEBUS, Prop'r.

SPECIAL TREATMENT OF ALCOholism at the private residence of a retired physician in the Adirondack region.
Address A,
Box 1135,
New York City.

I WILL AGAIN RECEIVE AND DISTribute reading matter for the South and Southwest. Books, magazines, reviews, the *Nation*, all Government reports and public documents, college reports, etc. Express charges must be paid to this point.
J. B. HARRISON, Franklin Falls, New Hampshire.

Artistic Presents of Permanent Value.

High-class Etchings and Engravings, costing, with suitable frames, from $6.00 to $70.00 each. Eight separate important Etchings published November 1st.

Catalogue free by mail.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of the *Nation* has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates, the bindings generally counting for nothing. Volume I. has readily brought $10 and upward when complete, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased a few years ago, a large quantity from the publishers.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in the *Nation*.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XL. comprising the first half-year of 1885.]

RECORD OF POLITICS and Politicians in the United States, 1865-1882: An analytical index to the *Nation* for that period (with occasional parallel references to McPherson's Political Handbooks and other sources). This index supplements the chiefly literary index to the *Nation* published in 1880. Valuable to all libraries, students, and editors. Price, in paper, $1 00. (Purchasers will please remit with order; accounts cannot be opened.) Address PUBLISHER of the *Nation*, Box 794, New York City.

BESIDES ITS ARTISTIC SPECIAL Architectural illustrations, *The Sanitary Engineer* gives *each week* an illustration of a moderate-cost dwelling of approved design.

THE SANITARY ENGINEER.

A Weekly Journal devoted to ENGINEERING, ARCHITECTURE, CONSTRUCTION, and SANITATION. Published Thursdays, at 140 William Street, New York. $4.00 per year. For sale by Newsdealers, 10 cents.

Littell's Living Age.

Jan. 1, 1886, THE LIVING AGE enters upon its 168th Volume, having met with con tinuous commendation and success.

A WEEKLY MAGAZINE,

it gives more than

THREE AND A QUARTER THOUSAND double-column octavo pages of reading-matter yearly. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a completeness nowhere else attempted,

The best Essays, Reviews, Criticisms, Serial and Short Stories, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

It is therefore invaluable to every American reader, as the only satisfactorily fresh and COMPLETE compilation of an indispensable current literature—*indispensable* because it embraces the productions of the

Ablest Living Writers

in all branches of Literature, Science, Politics, and Art.

"It is not too much to say that with THE LIVING AGE one commands the whole field of current literary activity; and it has never been so bright, so comprehensive, so diversified in interest as it is to-day."—*Boston Traveller.*

"It has now for many years held the first place of all our serial publications. . . . There is nothing noteworthy in science, art, literature, biography, philosophy, or religion that cannot be found in it. . . . It contains nearly all the good literature of the time."—*The Churchman, N. Y.*

"Nearly the whole world of authors and writers appear in it in their best moods. . . . The reader is kept well abreast of the current thought of the age."—*Boston Journal.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New York Tribune.*

"It enables its readers to keep fully abreast of the best thought and literature of civilization."—*Christian Advocate, Pittsburgh.*

"Biography, fiction, science, criticism, history, poetry, travels, whatever men are interested in, all are found here."—*The Watchman, Boston.*

"Through its pages alone it is possible to be as well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"In fact, a reader needs no more than this one publication to keep him well abreast of English periodical literature."—*Sunday School Times, Philadelphia.*

"Foremost of the eclectic periodicals."—*N. Y. World.*

"In subscribing for it, our readers will secure more for their investment than in any other way of which we are cognizant."—*Iowa Churchman, Davenport.*

"Coming once a week, it gives, while yet fresh, the productions of the foremost writers of the day."—*Montreal Gazette.*

"One cannot read everything. . . . No man will be behind the literature of the times who reads THE LIVING AGE."—*Zion's Herald, Boston.*

"It furnishes a complete compilation of an indispensable literature."—*Chicago Evening Journal.*

"It saves not only time, but money."—*Pacific Churchman, San Francisco.*

"It has become indispensable."—*New York Observer.*

"The best publication we know in the world."—*Morning Star, Wilmington, N. C.*

Published WEEKLY at $8.00 a year, free of postage; or for $10.50 THE LIVING AGE and any one of the American $4 Monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year, *postpaid*; or for $9.50 THE LIVING AGE and the *St. Nicholas.*

Now is the time to subscribe, beginning with the New Year.

DAVID G. FRANCIS, 17 Astor Place, N. Y.

BALZAC IN ENGLISH.

"The time should now be ripe for the introduction of English-speaking people to an author who by right of genius stands alone among his contemporaries, and whose marvellous knowledge of human nature, subtle analytic power, encyclopædic learning, and brilliant descriptive talent justify the daring comparison of his productive force with that of Shakespeare."

A Review of Balzac's 'The Duchesse de Langeais,' in its English dress, as published in Messrs. ROBERTS BROTHERS' series of translations of Balzac's Novels, reprinted from the New York *Tribune*:

BALZAC.

THE DUCHESSE DE LANGEAIS: WITH AN EPISODE UNDER THE TERROR, THE ILLUSTRIOUS GAUDISSART, A PASSION IN THE DESERT, and THE HIDDEN MASTERPIECE. By Honoré de Balzac. Translated. Boston: Roberts Brothers.

The 'Duchesse de Langeais' will be a revelation to those not already familiar with the productions of Balzac's genius. So slight a plot, yet so powerful an interest; so limited a scene of action, yet so sustained a fascination; so prodigious a philosophy, so profound a knowledge of human nature, so keen a psychologic analysis, condensed into so brief a space, bespeak the master. The story, or rather study, is of two souls, brought together under circumstances which, combining with the tendencies set up by their previous conditions, produce struggles, convulsions, and final tragedy, so incisively depicted, so luminously presented, that the least details become an intellectual possession for the reader thenceforth. There is no melodrama in the tale. All the interest, all the action, is confined to the development of the relations between the Duchess and Montriveau. A man of noble mind, one who has matured in all save knowledge of the conventional world and experience of woman's love, is suddenly thrown into intimacy with the most dangerous, the most fatal of charming women. The Duchesse de Langeais is a youthful and beautiful creature, who has been graduated in all the coquetries of a Parisian court: whose luxurious leisure tempts her to practise her arts of seduction, but whose native purity or coldness protects her against the moral dangers of such pastime. She has never loved; and he, in early middle age, full of energy, indomitable of will, innocent of social hypocrisies and women's treasons, loves for the first time. The contact of these discordant spirits furnishes Balzac opportunity for the exhibition of his subtlest art. The gradual processes by which they change places; the entanglement of the Duchess, despite her coolness and insincerity, in a *grande passion*; the awakening of Montriveau to the true character of her feelings; the vengeance prepared by him, and its unforeseen and terrible reaction—all is set forth with a power and intensity which convey an almost painful impression of reality.

It is, as Théophile Gautier observed, red blood that runs in the veins of Balzac's people, and not mere ink, as in the creations of too many authors. The same clever critic has explained the wonderful vitality of these characters. "Balzac," writes Gautier, "possessed, like Vishnu, the gift of avatar; but while the number of Vishnu's avatars is fixed at ten, those of Balzac are beyond count, and what is more, he could invoke them at will. Though it may seem a strange thing to say in the nineteenth century, Balzac was a seer. His gift of observation, his perspicacity as a physiologist, his literary genius, are insufficient to account for the infinite variety of the two or three thousand types that play more or less important parts in the Comédie Humaine. He did not copy them, he actually lived them ideally, wearing their clothes, contracting their habits, surrounding himself with their conditions, being them for the time. Thus proceed these sustained, logical characters, which neither forget themselves nor are inconsistent with themselves, which are endowed with an individuality at once intimate and profound." Thus it is that Balzac produced not only so many true types, but such strongly differentiated female characters, alike only in their naturalness and their vivid realism. The history of fiction can indeed show little to compare with this marvellous cabinet of heroines; this illustrious gallery containing such exquisite portraits as those of Madame Firmiani, Madame de Mortsauf, the Princesse of Cadignan, the Duchesse de Langeais, Madame Jules, Seraphita, Modeste Mignon, Diane de Chaulieu, and the Duchesse de Maufrigneuse.

But the definition and description of types of modern French society was but a part of Balzac's scheme, which involved the analysis of their environment, the illustration of all the tendencies of the age, good and bad—in fine, a complete picture of the period. In accord with this purpose, we find in the 'Duchesse de Langeais' an introductory sketch of the Faubourg Saint Germain, which is necessary to a thorough comprehension of the story, but which exhibits the author in a new light—as a historian of national manners and social tendencies, gifted with a penetrating and judicial analytic talent. Here, too, the extraordinary weight and fulness of Balzac's writings are displayed clearly. The difference between his style and that of the best French novelist of to-day is almost startling. In his pages are seen the pregnant sentences, the fortunate expressions, the profound thoughts, the clean-cut phrases, the virile power which mark the few princes of the intellectual kingdom. There is nothing redundant, nothing tawdry, nothing crude. Remembering, indeed, the astonishing toil and agony of preparation with which he struggled across the chasm which in him lay between thought and its expression, we need not wonder at the final solidity and completeness of his work. Yet it embodies lessons which the later literary schools have been slow to learn.

The 'Duchesse de Langeais' has been well chosen to follow the 'Père Goriot' in the American translation. It is in quite another vein, but an equally powerful one. It is a unique study of passion and character, informed by a mingled tenderness and poetry unsurpassed in fiction. *As in the initial volume of the series, the work of the translator has been done conscientiously, appreciatively, and well. There goes to the fit translation of Balzac a certain rapport with his fiery and comprehensive genius. The translator must be more than a master of the language. He must feel the author's spirit before he can hope to preserve in a strange tongue the subtleties, the delicacies, the beauties which, with the freshness and charm, have also something of the evasive and evanescent character of the bloom of fruit. In the present instance, it is evident that the translator possesses the right degree of appreciation, enthusiasm, and insight. With few exceptions, the rendition is as faithful and complete as we are at all likely to have. We have noted a few slips, and one or two errors of the press, but nothing to affect the work perceptibly. As a whole, it is a satisfactory and creditable performance, and it gives fresh ground for hoping that the experiment of the publishers will prove to have been seasonably made.*

As the 'Duchesse de Langeais' is not long enough to fill a volume of the average size, four of Balzac's short stories have been added. They are 'An Episode under the Terror,' 'The Illustrious Gaudissart,' 'A Passion in the Desert,' and 'The Hidden Masterpiece.' While none of these stories either crushes with or dominates the strong sentiment of the principal tale, they have been judiciously chosen so as to display the remarkable versatility of the author and his not less remarkable skill in constructing such novelettes. His short stories are, indeed, often fuller of suggestion and creation than many elaborate romances of the three-volume order, and sometimes, as in the case of 'Madame Firmiani,' they contain not only the germinal ideas but the framework of his longer works. Those given here illustrate his methods well, though they are by no means his best work of the kind. 'The Illustrious Gaudissart' is of a chastened Rabelaisian order, while 'A Passion in the Desert' shows an imaginative force the luxuriance and fecundity of which are alike surprising. Altogether, the second volume of the series is well calculated to strengthen the favorable impression created by the issue of the first.

In selecting from the Comédie Humaine only a few stories, however, there is reason to fear that the American public may fail to form the right conception of his genius. It may be that some of his works will not bear translation, but if any encouragement is given to the enterprise of the Messrs. Roberts—and we believe that 'Père Goriot' has been welcomed with some warmth—it is to be hoped that at least half of them will be reproduced, and two-thirds would be still better. Since so many of Balzac's characters appear repeatedly, an interest of a peculiar kind attaches to the fortunes of such people as Madame de Beauseant, Rastignac, Vautrin, etc., and this can only be satisfied fully by tracing them through the many changing scenes in which they take part. The day will come when the imperfections of Balzac will no more stand in the way of a catholic edition of his works than those of Shakespeare have done. In the meantime much credit is due the Messrs. Roberts for their courage in undertaking an enterprise so beset with doubts notwithstanding its desirability.

Messrs. ROBERTS BROTHERS' Edition of the Novels of HONORÉ DE BALZAC, newly translated into English, 12mo, handsomely bound in half morocco, French style, price $1.50 each:

Ready.—
- PÈRE GORIOT. Prefaced with Balzac's own account of his plan in writing the 'Comédie Humaine.'
- THE DUCHESSE DE LANGEAIS. With An Episode under the Terror, The Illustrious Gaudissart, A Passion in the Desert, and The Hidden Masterpiece.

Nearly Ready.—CÉSAR BIROTTEAU (Grandeur et Décadence de).

Send for our new Descriptive Catalogue. Our books are sold by all booksellers, or they will be mailed, post-paid, by the publishers,

ROBERTS BROTHERS, Boston.

The Nation.

NEW YORK, THURSDAY, DECEMBER 24, 1885.

The Week.

THE Senate has acted well in passing so promptly the Hoar Presidential Succession Bill. It will now come before the House among its first business, and we presume will be passed without serious opposition. Mr. Randall is credited with a purpose of opposing it with a measure of his own which provides that the Presidential electors shall hold their offices for a term of four years, and shall be given the power to fill vacancies in the offices of President and Vice-President. This proposition is so palpably unwise that it is likely to receive small support either in the House or out of it. Instead of being a solution of the succession problem, it would add to its complications. It would confer the power of selection upon a body of men from whom it has been so completely removed by force of public sentiment that for the past thirty-five or forty years they have merely acted as recording clerks. No elector in recent years has presumed to exercise any individual choice in voting for President and Vice-President. The Electoral College has grown in size and cumbrousness in proportion as it has diminished in power. It has now 401 members, and the chances of confusion from deaths and other causes are proportionately great. The idea of trusting the power of choosing a President and Vice-President to thirty-eight different bodies of men, meeting in thirty-eight different States, and all originally appointed to exercise merely nominal clerical functions, is almost grotesque.

The debate in the Senate on the Presidential Succession Bill hinged on an amendment offered by Mr. Hoar to his own bill, which amendment repealed the existing law providing for a new election of President and Vice-President in case vacancies occur in both offices at a period more than five months before a regular election would take place. The effect of this amendment was to make the Secretary of State President for the unexpired portion of the four years' term, the other Cabinet officers succeeding in a specified order in case of further vacancies. Senator Edmunds objected to this amendment as an innovation of a radical sort, substituting in place of the choice of the people for that high office the choice of the President and Senate. Virtually, said Mr. Edmunds, the Senate, in confirming the President's Cabinet officers, will, in every case, be voting for a possible President. A Republican Senator will be thus asked to vote for a possible Democratic President—an act which Mr. Edmunds as a good Republican could not perform, although persons holding such lax views of party fealty as Mr. Hoar entertains might do so. There is a modicum of humor in this argument which goes to soften the asperities of debate; but we think that the distinction which Mr. Edmunds draws between a five months' acting President and one holding for a longer period, even three years and five months, is not a distinction grounded upon principle, but wholly upon policy. Since somebody must act as President during the supposed vacancy, and while the machinery of a national election, preceded by sufficient notice, is being put in motion, it follows that Senators when they vote to confirm a Cabinet officer are voting for a possible President. The question whether this possible President shall hold the office only five months, or, in a very remote contingency, three years and five months, is one of policy. It involves the question whether a new election, changing the quadrennial period, is desirable. Such an election would disarrange a large number of State elections which have been purposely adjusted to the existing Presidential term, and would therefore produce a good deal of inconvenience, and this inconvenience would be repeated as often as the quadrennial period should be changed. As against this we have to reckon with any possible inconvenience resulting from Mr. Hoar's plan of devolving the duties of the President upon the Secretary of State during the whole of the unexpired term. We cannot think that these would be greater in any case than those which commonly result from the succession of the Vice-President to the Presidential office, of which it may be said that the country is not likely to borrow any distress about them.

An interesting question has been raised as to the attitude which a Secretary of State, who should become acting President under the Hoar bill, would hold toward the State Department. A careful study of the constitutional provisions regarding the succession seems to leave no doubt that he must remain Secretary of State, just as a President pro tem. of the Senate who should become acting President of the United States under the old law would remain President pro tem. of the Senate. The reason in each case is the same—because it is only by virtue of holding the office of Secretary of State or President pro tem. of the Senate that he can act as President. There is a clear distinction between the language which the Constitution employs regarding the contingency of a Vice-President succeeding a President, and that used regarding a case where a third person succeeds both a President and a Vice-President. In the former case, "the powers and duties" of the Presidency "shall devolve on the Vice-President," who becomes as fully President as his predecessor; in the latter case Congress may declare "what officer shall then act as President, and such officer shall act accordingly" until the disability is removed or a new President is elected. In other words, Congress can only designate as acting President some "officer" of the Government, and this man can only act accordingly while he remains such officer. For instance, if Mr. Cleveland were to die and Mr. Bayard enter the White House under the Hoar law, he would act as President only by virtue of being Secretary of State, and he must remain "such officer" as the condition of continuing acting President. The consequence would be that he could make an entirely new Cabinet except as regards the State Department, but he could not resign as Secretary of State and appoint another man than himself to the office, because it is only as being Secretary of State that he has the power to exercise the functions of President. The practical working of the system would be that the Secretary of State thus acting as President would throw off as much as possible of the Cabinet officer's work upon his assistant secretaries, and especially the First Assistant Secretary, just as he now does when he goes off on a vacation. The First Assistant would virtually become Secretary of State, and if the acting President were not satisfied with the person whom he found in that office he could appoint another, so that there would be no practical difficulty about his retaining himself the title and power of Secretary.

The House has adopted the report of the Committee on Rules distributing most of the appropriation bills among the several committees appointed to consider affairs of the several departments for which the money is asked, instead of leaving them in charge of the Appropriations Committee proper. The majority in favor of the change was overwhelming, exactly three to one among the Democratic members, and a little more than three to one among the Republicans. Mr. Randall's tyrannical course as Chairman of the Appropriations Committee has been the most potent cause in producing this strong sentiment, although doubtless many Republicans supported the movement because they hope that the change will result in extravagance on the part of the Democratic majority, from which the Republicans will gain a partisan advantage. Personal and partisan considerations aside, however, many conscientious and able men of both parties have supported the movement for distribution, because they believe that it is in the interest of good legislation. While there is force in the claim that the tendency will be for the several committees to exaggerate the importance of their respective spheres and to ask larger appropriations, there will also be motives at work in the other direction, and we are quite ready to see the experiment tried.

Whatever opinion one may hold as to this matter, all good citizens will rejoice over another change which was carried through at the same time, abolishing the right to attach legislation to appropriation bills. The practice of allowing "riders," often incorporating important changes in the laws, upon acts which are nominally and should be really confined to the appropriation of money for carrying out existing laws, is demoralizing to Congress and unjust to the Executive, who may thus be coerced into approving measures against his will, because he considers the extra session of Congress which a veto would require as the greater evil; and it has been fruitful of evil ever since it was adopted. It is a great gain to have it positively forbidden in future. This reform should be supplemented by another, which will allow the President to veto parts of an appropriation bill without endangering the rest.

New York, Pennsylvania, and some other States have adopted this principle, and it saves the taxpayers a great deal of money every year. We are glad to see that Mr. Randall has introduced a constitutional amendment to bring about this end, and we hope that he will be able to push it through the House. If Congress will only send such an amendment to the States, there can be little question of its prompt ratification.

Senator Logan's position on the Presidential appointments appears to be the prevailing one among Republican Senators. They are disposed to grant the President's request for a frank and sincere mutual effort to get only good men into office. The President has assured them that where unfit men have been named for office by him it has been through misinformation, and that he will be glad for proof of such mistakes, and will, when such is furnished, immediately withdraw the nominations. The Senators, on their part, say they will make no factious opposition, will confirm without question all appointments of undoubted fitness, and will cordially coöperate with the President in his efforts to administer the public service for the public good. Here is certainly a new and most important departure from the old way of doing things, but it is due entirely to the President's directness and sincerity of purpose, or what an amusing partisan critic of him calls in one breath his "incarnation of the commonplace" and "his sturdy independence, which the people like because they imagine it to be a kind of genius." It is both. His view of public office as a public trust is in one sense commonplace. It means the application of commonplace business ideas to the public service, administering the great office of President on the commonplace basis of honesty, integrity, and simplicity. But it is so rare a thing for us to have a President who has the courage to pursue such a policy, that it becomes also a "kind of genius."

We must not let eagerness to put down polygamy in Utah carry us into mischievous excess. The bill introduced by Senator Edmunds providing for a seizure of the property of the Mormon Church seems to point in this direction. It empowers the President to appoint fourteen trustees to administer this property, and to make reports on it to the Secretary of the Interior. The sole reason for this is the fact that certain members of the Mormon Church practise polygamy, and the Mormon clergy teach its lawfulness, if not its righteousness. Apart from polygamy there seems to be no more objection to the Mormon Church than there is to any church in which the clergy are very powerful and the people very ignorant. Polygamy is now a legal offence, and it has been the practice of the United States hitherto, and a very wholesome practice it is, when legal offences are committed, to search out and punish those, and those only, who commit them, by due process of law. The prevention of offences by the seizure of property, whether belonging to corporations or individuals, such as the Edmunds bill contemplates, is, we believe, something hitherto unknown in our jurisprudence or politics, and might prove a most unfortunate precedent. If the Mormon Church as a corporation has no legal or proper standing, it ought to be wound up in the usual way, and its property distributed among the parties in interest. Its seizure and administration by Government trustees would be a proceeding which we trust Congress will never sanction for any purpose whatever.

Mr. Vest's resolution in the Senate, apropos of the Keiley correspondence, "denies the right of any foreign government to assert against any citizen of this country disqualification for office by reason of his religious belief or that of his family." This is an absolutely impregnable position. Any foreign government which claimed such a right would act in a very silly way. Mr. Vest evidently thinks Austria has done this foolish thing. But he is mistaken. She has not. Her position is, "Appoint whom you please, and for what reasons you please, to whatever office you please on your own soil; but do not send your officers here unless I agree to receive them, and I will not receive them unless I can guarantee their comfort and usefulness while they are in my territory." This is the whole story. The affair no more calls for a resolution in vindication of religious liberty than one in vindication of cleanliness or monogamy. Everybody is right in this matter. We have a right to appoint anybody we please to be minister to any court on earth, and every court on earth has an equal right to reject anybody we appoint. It is a perfect arrangement all around, and Mr. Vest may sleep soundly.

Senator Hampton, of South Carolina, has reintroduced an old bill once offered by Mr. Trumbull, of Illinois, prohibiting Senators and Representatives in Congress from recommending persons for office to the President of the United States. Some difference of opinion is entertained as to Senator Hampton's purpose in reintroducing this measure, whether it was intended by him to ridicule civil-service reform, or to produce a desirable change in the existing mode of filling the Federal offices. It is certain that Mr. Trumbull's purpose in presenting it was perfectly serious. Mr. Hampton's usual gravity leads us to infer that he intended at least to draw public attention to a notorious evil with a view to its ultimate extinction. Mr. Trumbull supported his motion mainly by the argument that Senators and Representatives were robbed of their time in running errands for office-seekers, and were unfitted for their real duties as legislators by being put in the attitude of solicitors of favors from the President and heads of departments. Every visitor at Washington who has had occasion to call at the Executive Mansion or at any department, during a session of Congress, finds the way blocked during the morning hours by a throng of Congressmen—it would hardly be disrespectful to call them a mob—with their hands full of the "papers" of applicants for office. Very frequently the applicants themselves are present also, putting the Congressman through. The latter, if he is fit to be in Congress at all, is thinking about the committee meeting that he ought to attend, and is inwardly cursing his inexorable companion who insists upon seeing the President or the Secretary under the Congressman's "pass."

The typical Southern Bourbon was a man whose case was absolutely hopeless, and it was therefore a mercy to him as well as a benefit to all whom he influenced that he should leave a world to which in its present state he could never become reconciled. There are Northern Bourbons whose condition not long ago appeared scarcely less hopeful than that of Toombs, but the country is watching with amazement the process of their rapid transformation into sympathy with the age in which they live. Take the case of Mr. George F. Hoar for instance. Only a few months ago this Massachusetts Bob Toombs was in a state of the wildest despair over the election of a Democrat to the Presidency, and only the fact that the Republicans were sure to control the Senate prevented him from predicting the downfall of the Republic, as his Georgia prototype had so often done. Yet during the past fortnight we have seen this same Mr. Hoar bringing in his old Presidential Succession Bill with a new provision, which in case of Cleveland's death would make a Democratic Secretary of State President for the remainder of the term, instead of insisting upon a new election, with its chances of Republican victory, at the earliest possible moment. More wonderful still, we have seen this same Mr. Hoar proposing to remove the curb which the Tenure-of-Office Law enables a Republican Senate to keep upon a Democratic President, and thus to give Grover Cleveland larger control over the civil service than any Republican President has enjoyed since Andrew Johnson's day. There has been nothing to equal this conversion since the days of Saul, and the people who maintain that the age of miracles is not past can establish their proposition beyond cavil, by merely setting some of the threatenings and slaughter which Mr. Hoar was breathing out against half of the American people only a few months ago beside the gracious tone of his present deliverances.

The death of Robert Toombs is a severe blow to the sectional wing of the Republican party. His bitter ravings about the inferiority of the negro to the white man, based upon his well-known declaration that if God had not intended the negro to be inferior, he would not have created him black, have been of great service for many years. He was always ready to give these views a fresh airing, and whenever a campaign showed signs of dulness a reporter was sent to interview him, with the inevitable result of securing the same old talk about the negro and the sacred cause of secession. The talk was at once cited as evidence that the whole South was simply waiting its opportunity to put the negro back into slavery, and to try the war over again. Whenever Toombs was not sufficient to arouse the North, the coöperation of Jeff Davis was sought, and seldom failed to be obtained. In the course of nature, Davis must follow Toombs within a few years, and it will then be necessary for the sectional agitators to go out of business, or else continue it entirely without capital.

Some correspondence of General Grant's on the Fitz-John Porter case has been published, and shows how thoroughly convinced he was, after full investigation in a field in which he

was an acknowledged master, of Porter's innocence of the charges against him. Grant's opinion of President Arthur's veto of the relief bill of last session is concisely expressed by describing it as "the merest sophistry." It was one of the most discreditable of the many discreditable small things which marked the late Administration. The continuance of the wrong which was done Porter, after every one of his opponents, except the most passionate, and prejudiced, and unjudicial of them all, General Logan, has abandoned the field, is becoming a national disgrace.

The Boston *Commercial Bulletin* wants to know how we have ascertained that the average ad-valorem duty on screws is 110 per cent. It "points with pride" to the last report of the Bureau of Statistics showing that the rates of duty actually paid on the importations of the year 1884 were only 55½ per cent., and adds that the duties on screws "have never averaged 100 per cent., and the free-trade falsehood to that effect should be nailed upon the spot where it originated." We assume that when the *Commercial Bulletin* parades the figures of the Bureau of Statistics, it knows full well that the Bureau takes no account of articles upon which the duty is prohibitory, which happens to be the case with all except the very small sizes of screws. The Bureau deals only with actual importations of goods. We stated that prior to July 1, 1883, the average duty on a general assortment of screws such as a hardware dealer would commonly keep on hand, was 110 per cent. Of course, the facts are surrounded by the thickest kind of a fog, in order that common people may not know how much they are swindled by the tariff. Screws are sold by the gross and taxed by the pound at different rates, according to the sizes. There are 106 different sizes in the price lists, although our tariff classifies them all under four heads at the rate of 6,8, 10, and 12 cents duty per pound. A very intricate mathematical calculation is required to show what the ad-valorem duty on a general assortment would be. Such a calculation was made for the use of the Ways and Means Committee in the month of February, 1883. Under the preëxisting tariff only the smaller sizes (¼, ⅜ and ½ inch) could be imported at all, the duties on the leading sizes—those most generally used—being prohibitory. The duty on the small sizes under the old tariff was 11 cents per pound. It was increased to 12 cents by the tariff of 1883, while a show of virtue was made by reducing slightly the rates on the larger sizes which would not be imported at either the old or the new rate, and could not be, even if the duty were reduced 50 per cent. Indeed, there is not the smallest room for doubt that if the duty on wire rods for screw-making purposes were repealed, and the duties on screws repealed at the same time, there would not only be no greater amount of screws imported than heretofore, but there would be an immediate and large sale of American-made screws in foreign markets. It is a fact that American screw manufacturers have undersold English manufacturers in the English colonies at times within the past four years, even under the adverse conditions imposed by the tax on their raw material. As the raw material is not produced in this country, even under the stimulus of 70 per cent. protection, the only reason for not repealing all the duties on screws and screw material is the intelligent one assigned by the Iron and Steel Association, that the tariff is a thing too sacred to be talked about.

There has never been a more impressive illustration of the Mugwump's potency as a factor in elections than that afforded by last week's voting in Boston. An examination of the figures in detail shows not only that Mayor O'Brien owes his increased majority over last year to the support of independent citizens who are for the most part Republicans in their political views, but also that he would have been beaten if all the wards had gone the same way as the "Democratic strongholds." There are five wards, three of them at the North End, which are usually Democratic by six, eight, and even ten to one. In these five wards Mr. O'Brien as a strictly partisan candidate had last year 6,348 majority, while this year, by reason of his independent course in office, he received only 5,149 majority. If he had lost in the other twenty wards in the same proportion, he would have been beaten in the whole city by a majority of 2,674. In fact, he was victorious by a majority of 8,580, and he owes this to his immense gains in the ten Republican wards, where he cut down the Republican majorities from 1,492 to 440 in one instance, from 1,144 to 378 in another, and in a third case transferred a Republican majority of 368 last year into an O'Brien majority of 283 this year. It is worth noting that these are precisely the wards in which Cleveland last year made his largest gains over any previous Democratic candidate for President. We commend a study of these figures to such Democratic papers as the Atlanta (Ga.) *Constitution*, which the other day defined a Mugwump as "a man who considers himself, as a rule, too good for political duty, especially for the short and simple act of putting a vote in a vulgar election box."

Further evidence was hardly needed to demonstrate that prohibition is a failure in Iowa, but if anybody has still entertained doubts on the question, they must be removed by the candid and exhaustive study of the subject recently made by State Senator Sutton, of Iowa, himself hitherto a believer in prohibition, published in the Chicago *Tribune*. Mr. Sutton has made a thorough investigation as to the workings of the system in nearly all the counties, and makes detailed reports as to every city and town of over 300 inhabitants. A summary of his discoveries shows that since the law prohibiting the sale of liquors went into effect the number of places in the State where liquor is sold openly has increased from 1,806 to 1,837, while over 400 dealers are selling by the side-door device. The change for the worse has naturally been most marked in the cities. Des Moines, the capital, had reduced the number of its saloons under a high-license law to 60, while under prohibition it has 175; in Dubuque the increase has been 126; and the number of liquor-sellers has increased in greater or less degree in almost every city. Waterloo, a place of 6,500 people, which is one of the very few exceptions, has reduced the number of saloons from 20 to 16, but this has been done by allowing their existence and then levying upon them an annual tax of $275, for which there is, of course, no warrant in the law. There are plenty of villages where liquor is not sold, but they are places where public sentiment prevented liquor-selling without a prohibitory law, while in the cities, where restriction upon the traffic is most needed, it was never so free as under nominal prohibition. The wiser Prohibitionists are themselves coming to recognize the failure of their scheme for its object of diminishing intemperance, and although the Fusionists failed to carry the Legislature upon the platform of a license law, there is believed to be a chance that a local-option system may be substituted.

The anxiety of the English Liberals who do not know their own minds, to have it appear that Mr. Gladstone has no plan for conceding home rule, begins to be rather amusing. That he has a plan, however, though not a plan which he is ready to lay before the public, is just as certain as that he is alive. He will not put himself on paper, or produce anything formal, till Parliament meets, or perhaps not until he finds himself Prime Minister again; but, as he says himself, he is in the meantime "thinking, and thinking, and thinking." That home rule in some shape is going to be conceded during the coming year is as sure as anything in politics can be, and Gladstone will be the father of it if he can. It would probably be passed through more easily, however, if it came from the Tories, for the House of Lords will offer some resistance if the Tories oppose it. The London *Times* apparently builds some hope of its defeat on the action of the Massachusetts Legislature in taking away the appointment of the Police Commissioners from the Mayor of Boston and giving it to the Governor, "on account," it says, "of the growth of the Irish element and the consequent disorder and corruption." But the effect of this will surely be neutralized by the reëlection by a heavy majority of an Irish Mayor, Mr. O'Brien. Moreover, we have little doubt that if the Massachusetts Legislature found that its action with regard to the Boston police was damaging the prospects of home rule in Ireland, it would reverse it.

The Irish Orangemen are raising their voices in opposition to home rule, and threaten dreadful things if it comes to pass. They will, however, probably have as much influence in the matter as their 17 or 18 votes in the House of Commons will give them, and no more. All parties in England now recognize what a curse to Ireland they have been, and how little they amount to in politics. They represent nothing now but a survival of the ferocious religious bigotry of the seventeenth century, and are perhaps the only body of men in our day who openly clamor for a restoration of religious intolerance and persecution. Their threats of civil war are ridiculous, but they evidently hope to frighten the English public with them. One of the fraternity predicts, in a letter to the London *Times*, as a result of home rule, "bloodshed, pandemonium, and massacre," which is certainly an awful programme; but massacre besides pandemonium would seem to be unnecessary.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 16, to TUESDAY, December 22, 1885, inclusive.]

DOMESTIC.

IN the Senate on Thursday Mr. Hoar (Rep., Mass.), from the Committee on Privileges and Elections, reported favorably the bill to fix the day for the meeting of the electors for President and Vice-President, and to provide for and regulate the counting of the vote for President and Vice-President and the decision of the questions arising therefrom. Mr. Hoar said he would call up the bill for action immediately after the disposal of the Presidential Succession Bill and the bill fixing the salary of United States District Judges. The bill went to the calendar.

Mr. Edmunds, in an argument on Wednesday against the Hoar bill to provide for a Presidential succession, said that if he had the regulation of the question under discussion, he would leave the substance of the law where it was now, but would add to it a provision requiring the House of Representatives to meet and organize on the 4th of March, in order that the country should have four lives between the Head of its Executive office and chaos. That would meet everything, except something that might happen once in perhaps a hundred thousand years, before a new election could be had. He had the highest respect for the present Secretary of State, but would not, in the emergency contemplated, place such an office as the Chief Magistracy in the hands of any person for the remainder of the four-year term without any power in the States or the people to have a new election.

The Senate on Thursday passed the Presidential Succession Bill, after rejecting, by a vote of 21 to 37, Mr. Edmunds's amendment to strike out the clause dispensing with a new election. Mr. Edmunds concluded not to offer the Electoral Count Bill as an amendment.

The indications are that Senator Hoar's Presidential Succession Bill will not pass the House with the unanimity which has been assumed, or at least without considerable discussion as to the general principles involved.

Among the nominations sent to the Senate on Monday were those of Thomas, of Maryland, to be Indian inspector, and of Pillsbury, of Massachusetts, to be Collector of Internal Revenue, which it was thought might be withheld. Senator Hoar introduced a resolution instructing the Committee on Finance to investigate the charges of undervaluation in New York, and the general method of the collection of customs revenues. The resolution was agreed to. Mr. Cullom (Rep., Ill.) introduced a postal-telegraph bill. It provides for the purchase of any existing lines under the provisions of the act of 1866, at an appraised valuation to be ascertained by a commission of five disinterested persons.

The President on Wednesday nominated John Bigelow to be Assistant Treasurer at New York city in place of Mr. Acton, and Franz Sigel to be Pension Agent at New York city.

The Senate Civil-Service Committee on Monday concluded to report favorably all three nominations, Edgerton, Trenholm, and Eaton, for Civil-Service Commissioners. In executive session the nomination of Mr. Bigelow, for Assistant Treasurer at New York, was the only one confirmed.

Senator Beck (Dem., Tenn.) made a savage attack upon the Administration in the Senate on Monday on account of its silver policy. He denounced the Administration for "hoarding gold," and implied that Secretary Manning was trying to prevent silver from going into circulation. He said that a thief who would break into the Treasury and steal $1,000,000 would be a greater public benefactor than the officer who would hoard the money, as the thief would put it in circulation, while the hoarding policy deprived the public of any benefit from the money.

Voting began on the amendments to the House rules on Thursday. Mr. Springer tried to have the Committee on Railroads and Canals made a canal committee only. Mr. Murphy, of Iowa, the special custodian of the Hennepin Canal interests, made a speech advocating the amendment and the canal, and the proposition was defeated by a vote of 94 to 133.

The House on Friday adopted the amended rules on a test vote on the question whether the new rule distributing the bills should be adopted. Mr. Randall was defeated 226 to 70. A proposition by Mr. Herbert that committees be allowed under the rules to report at any time, and another from Mr. Cobb that the Public Lands Committee may report land-grant forfeiture bills at any time, were adopted. Mr. Adams, of Illinois, succeeded in obtaining an amendment providing that there shall be no appropriations in appropriation bills except those authorized by law.

The bill pensioning the widow of General Grant has been passed by both houses of Congress.

Congress has been in session two weeks. About 2,000 nominations have been placed upon the executive calendar of the Senate, and only one confirmation has been made. Seven hundred bills have been presented in the Senate, and many more have been referred to the committees in the House. One bill, the first to receive the signature of President Cleveland—that to remove the political disabilities of General Lawton, of Georgia—has become a law. The committees in the House, with one or two exceptions, have not been appointed, and the machinery of Congress has not been fully put in motion.

Both houses of Congress passed a resolution adjourning on Monday till January 5, 1886.

On Monday the noted case of the United States vs. John T. Chidisten and Logan H. Roots came up in the Federal Court of Little Rock, Ark. It is one of the well-known Star-route cases which have been postponed from time to time. The Government brought suit to recover $174,000, which it claimed was illegally paid to the contractors of the route known as the Southern Transcontinental route and the longest in the country. When the case came up the Government was not ready. District-Attorney J. W. Howe had not time to prepare the case, and it was dismissed. Proceedings will, however, be instituted to have the case begun again.

The Salt Lake City Gentile clergy held a meeting on Monday and adopted the following: "To the country—The Grand Jury have unearthed a conspiracy on the part of Mormon officials to blacken the character of public men of this city. An attack on Christian ministers has been begun. We warn the Eastern public against these slanderous reports emanating from Mormon sources."

In the United States Court at Atlanta, Ga., on Thursday, Judge McCoy decided the contested election case growing out of the recent prohibition election in that county. He had previously granted a temporary order restraining the Ordinary from announcing the result of the election, which was for prohibition. The Judge refused to continue this injunction, deciding the case against the liquor men on every point.

A plot has been unearthed in San Francisco for the wholesale assassination of twenty of the most prominent men in that city. Members of the Socialist Revolutionary Society were to carry out the murders. Four men were arrested on Wednesday. They were taken to the city prison, where they boldly asserted that they were dynamiters, and that they proposed to get rid of the citizens named and then raze Chinatown. The prisoners are also members of the German branch of the Anti-Coolie League.

The Brockton, Mass., lasters' strike was ended by a compromise on Tuesday.

There is little hope of rescuing alive twenty-three miners imprisoned by a cave-in of the Nanticoke, Pa., mine.

Prof. John C. Draper died on Sunday at his home in this city. He was born in Virginia on March 31, 1853, and was the oldest son of the late Prof. John W. Draper. He was educated at the University of the City of New York, and was graduated from its Medical Department in 1857. He then for a year pursued medical and chemical studies in Europe. In December, 1858, he was made Professor of Analytical Chemistry in the University of the City of New York. This chair he held for ten years. In 1860 he also became Professor of Chemistry in the Cooper Institute, which chair he held for three years. For six months in 1862 Dr. Draper served as surgeon of United States Volunteers, and was on General Ward's staff. In 1863 he took the Chair of Physiology and Natural History in the College of the City of New York, which he had held ever since, and three years later he became Professor of Chemistry in the Medical Department of the University. Professor Draper was well known as an author of scientific books and papers. His original researches were made in the domain of chemistry, embracing all its branches, and always having a distinct bearing on the advancement of medical knowledge and practice.

FOREIGN.

It is asserted on trustworthy authority that Mr. Gladstone's scheme for home rule in Ireland, which he is prepared to advocate when the Tories and Parnellites split, embraces an Irish Parliament in Dublin. The Irish members by this scheme will not be excluded from the House of Commons, since the Dublin Parliament will only deal with Irish affairs. The power of veto will only be exercised by the Crown upon advice of the Irish Ministry. Mr. Gladstone believes the personnel of the Irish Parliament would be more representative of the best elements of the Irish nation than the present Irish party in the House of Commons, who have been elected merely to annoy the British Government. Mr. Gladstone has secured the support of Earls Spencer and Granville, and expects to win that of the Marquis of Hartington, and even of Mr. Goschen, and hopes to carry the scheme through the Lords, in view of the great gravity of the situation. Failing that, he is confident of a fresh mandate from the English people.

A London despatch to the *Irish Times* said: "Should the Queen's speech on the opening of Parliament not allude to local government for Ireland, Mr. Gladstone will move an amendment to the royal address stating that such a measure for Ireland is necessary. The Parnellites will support the motion. Mr. Gladstone will then take office and introduce a bill granting home rule to Ireland."

After various attempts in London to discredit the proposed scheme for home rule, Mr. Gladstone at a late hour on Thursday night sent the following telegram: "My reply in regard to the *Standard's* statements applies also to those of the *Pall Mall Gazette* and *Daily News*. Although those statements were unauthorized, proposals may conveniently be canvassed. Only an Irish Parliament will meet the case. Local councils, etc., would be useless. The right to veto the acts of an Irish Ministry would be an illusion. I propose instead the exercise of sovereign power on the advice of a minister responsible to the Imperial Parliament. The suggestion of an Irish Privy Council is unworthy of attention. The Privy Council survives only as a relic. The substitute is a Cabinet. The questions of commerce and policy are difficult ones; but with limitations I believe that home rule may safely be granted, and that it would tend to raise the character of the Irish members."

Notwithstanding efforts to disprove the authenticity of Mr. Gladstone's alleged home-rule scheme, it is asserted on trustworthy authority that the reports were deliberately and authoritatively issued through a responsible correspondent connected with the Liberal press, in order to learn the temper of the country on the

general question of home rule and certain special details. The great cardinal facts of Mr. Gladstone's full adherence to the policy of home rule, and that he has a definite scheme ready for the right occasion, are not doubted now by any well-informed public man in England.

The Marquis of Hartington, who was Secretary for War in Mr. Gladstone's Cabinet, has written the following letter with reference to the Irish home-rule scheme: "No proposals in regard to the policy to be adopted by the Liberal party with reference to the demand of a large number of Irish members for the legislative independence of Ireland have been communicated to me. I see no reason to depart in any degree from the declarations I made and opinions I expressed in my speeches in the late election in Lancashire and elsewhere, on the policy announced by Mr. Parnell as leader of the Irish Parliamentary party."

Mr. Joseph Chamberlain made a vigorous speech at Birmingham on Thursday night. He claimed that the bulk of the Liberal members of the House of Commons were Radicals, and that the future policy of the party would therefore be a Radical policy. He doubted whether it would be wise for the Liberals to accept office until the Tories had drunk to its dregs the cup of humiliation. He warned Parnellites, Whigs, and Radicals equally to maintain the integrity of the empire.

The London *Standard* on Saturday morning expressed the desire that the Conservatives would immediately prepare their scheme for local government in Ireland, and thus allow Parliament to pronounce early upon the issues between Mr. Gladstone and the Marquis of Salisbury.

The Grand Orange Lodge of Ireland met at Dublin on Monday and issued a manifesto signed by Lords Erne and Enniskillen. In it they say: "The aspect of affairs in Ireland was never more menacing than at present. Protestantism in three of the four provinces is at the mercy of avowed conspirators who are endeavoring to overthrow the rule of the Imperial Government. The duty of all true Irishmen is plain. While unwaveringly upholding Orange principles and abating not one jot of our conscientious opinions, we shall cordially welcome all who are willing to assist in keeping intact the bond of unity with the great empire of which we are proud to form a not unimportant part. . . . The slightest relaxation of the ties of the union will eventuate in separation and the ultimate ruin of the country. It will establish a drill ground for hostile armies and dock-yards for foreign fleets in the most valuable part of the empire. Therefore we appeal to those realizing our imminent peril to stand shoulder to shoulder, in defence of the union and in the promotion of the cause of loyalty, liberty, and religion. For God, the Queen, and the country."

The London office of the Loyal Irish Union has issued a manifesto calling upon the people to make a united effort to thwart the attempts of the Parnellites to drive the country into civil war. The programme urged by the Union is as follows: That Ireland be given a form of local self-government upon a broad and equitable basis, with representation in Parliament by a secretary and under-secretary chosen by the Irish members; that denominational universities and schools be assisted by the Government; that a permanent royal Viceroy be appointed, to live in the Viceregal Castle at Dublin; that Irish industries be encouraged by the allotment to Irish manufacturers of a share in Government work; that Irish fisheries be protected; that harbors and ports be improved; and that judicious assistance be given by means of loans to railways and public works—this last provision to be controlled by a Central Board of Works. Mr. Forster, formerly Chief Secretary for Ireland, denounces the scheme attributed to Mr. Gladstone for Irish home rule. He declares that the concession of home rule to Ireland would not solve the problem, and would be fraught with danger both to Great Britain and to Ireland. Earl Rosebery, who was a member of Mr. Gladstone's Cabinet, writes that he is willing to concede home rule to Ireland on condition that the Union be maintained. Mr. Parnell has sent a letter to his colleagues with reference to the party's programme. He says that it would be unwise at present for the Nationalists to formulate their demands, and that they will therefore play a waiting game and watch the course of affairs.

A man and woman were arrested in England on Friday for attempting to blackmail the Prince of Wales. They demanded £750, and intimated that unless this sum were forthcoming the Prince's life would be in jeopardy.

The London *Standard*, commenting upon the report of Secretary Manning, says that the tariff sustained by the American people is a promoter of business dishonesty, and that under it rascality thrives and flourishes. All manufactures exported from the United States, the *Standard* says, are shoddy.

Lieutenant Greely, the Arctic explorer, delivered a lecture in London on Monday night before the Royal Geographical Society. The Marquis of Lorne presided and many distinguished people were present. Captain Sir George Nares eulogized Lieutenants Lockwood and Brainard, of the Greely expedition, who succeeded in planting the stars and stripes further north than had ever before been reached by man.

Mr. Stephen Barker Guion, the well-known ship-owner, died in Liverpool suddenly from apoplexy on Saturday. He was born in New York on June 17, 1820, and was one of the original members of Williams & Guion.

Sir Henry Drummond Wolff, the British Commissioner in Egypt, has elaborated a scheme for reform in the management of Egyptian Government affairs which will eventually enable the Government to dispense with the domain administration.

Advices from Rangoon report that 500 Dacoits who recently attacked Shwegyeen were repulsed with a loss of eighty killed. The British lost one man. The Dacoits have been skirmishing with the English at other points, but it seems that the revolt has been checked. The Europeans who were reported to have been massacred were safe up to December 14, except three who had been murdered.

There is a hitch in the work of the Afghan Frontier Commission in demarcating the frontier line at Merutchak, and operations are thereby delayed.

A terrible dynamite explosion is said to have occurred in a Siberian mine. The accounts are conflicting as regards the number of persons killed, some placing the number at 400, while others place it as high as 1,000.

It was reported on Friday that the Sultan had appointed Prince Alexander Governor for life over Eastern Rumelia, with rights of succession. A report was also received in London that the Servian troops had withdrawn from the Widdin district.

Bulgaria has accepted the proposal of the Powers for an international commission to demarcate the Bulgaro-Servian frontier under certain reservations. She wishes the Commission to consider fairly the recent victories of the Bulgarian army.

It is reported that Dr. Weimar, one of the most active Socialist partisans, and an instigator of some of the greatest crimes of Nihilism, is dead. He was an intimate friend of the Nihilist assassin of the Czar Alexander I.

A split has occurred in the ranks of the Spanish Royalist party, and the rival sections are violent in their denunciation of each other. The breach took place at a meeting of the Royalist Club, when a stormy discussion arose, which culminated in an exchange of blows by some of the members. The section headed by Señor Canovas del Castillo, ex-Prime Minister, withdrew from the club rooms. The Royalist followers are dismayed at the rupture.

The Queen Regent of Spain on Friday refused an audience to the Duke of Saville, cousin of the late King. The Duke was thoroughly angered by the refusal of the Queen to receive him, and has openly spoken in abuse of her. He boasts that Queen Christina will soon be forced to relinquish the Regency and that ex-Queen Isabella will replace her. These declarations caused a sensation in Madrid. The Duke has been arrested.

Advices from Spain say a conspiracy to establish a republic has been discovered at Tarragona. The details of the movement are withheld by the Government.

The Carolines agreement was signed on Thursday with much pomp and ceremony. The Pope was present. Thirty-two guests attended the banquet given by Cardinal Jacobini in honor of the event.

Fifty cases of cholera have occurred in the Province of Venice.

The election for a President of the French Republic to succeed M. Grévy will be held on December 28.

The Republicans have introduced in the French Chamber of Deputies a bill for the taxation of foreigners. The object of the measure is to exclude foreign workmen from France.

A French Government despatch from Madagascar says: Peace between France and Madagascar has been concluded. It is reported that the treaty of peace gives France a protectorate over the whole of Madagascar, and an indemnity of $2,000,000.

A sensation was caused in Paris on Thursday by the collapse of a portion of the Pont Neuf, which connects the Isle de la Cité, on which is situated the Cathedral Church of Notre Dame, with both banks of the River Seine. It is the largest bridge in Paris and one of the oldest. A heavy rise in the Seine caused the disaster.

François Marie Théodore Labrouste, the celebrated French architect, whose death is reported by cable, was born at Paris, March 21, 1799. He was at one time Government Architect and was an officer of the Legion of Honor.

Prof. Leopold von Ranke, the German historian, on Monday celebrated in Berlin his ninetieth birthday anniversary. The most eminent personages in the empire presented their congratulations.

It is currently reported in Pekin, and generally credited, that the Emperor of China will be married in February next, at which time the Empress Regent will retire and the young Emperor will take possession of the Government.

Archbishop Tache, of Winnipeg, says that unless the Dominion Government of Canada takes stringent means to allay the bitter feelings and discontent of the Indians in the Northwest, there will undoubtedly be another rebellion within a month.

The following interesting statistics in relation to the Riel agitation to date have been published in Montreal. There have been held in Canada 106 public indignation meetings, at 25 of which Ministers were burned in effigy. In the United States 25 indignation meetings, at 5 of which Ministers have been burned in effigy, have been held. The number of requiem masses said for the soul of Riel in Canada has been 70, and in the United States 9. Seven protests against the Government's action have been made by city and town councils, 4 by county councils, 49 by local councils, 25 by national societies, 18 by clubs, unions, institutes, etc., and 3 by the university students in Quebec and Montreal.

The Edison telephone patents owned by the Bell Company have been sustained in Canada.

THE SUCCESSION QUESTION HISTORICALLY.

THERE has seldom been a question of national importance which was so one-sided as that of the proper succession to the office of Chief Executive in case both the President and Vice-President die, resign, or become incapable of discharging its duties. Justice obviously dictates that the line of succession shall be so constituted that the policy which the people elected a President to carry out shall be maintained "during the term of four years" for which he was chosen. The election of a Vice-President upon the same ticket with the President is the best approach that can be made to insuring this result in case the President alone dies. In case both President and Vice-President die, it is plain that the "officer" whom Congress is by the Constitution authorized to make acting President should be chosen from the chief officers in the executive department of the Government, where the President enforces a party policy by appointing men of his own party, rather than from the heads of the two branches of the legislative department, which may both be controlled by the opposite party. The theoretical argument, therefore, is altogether on the side of those who advocate the Hoar bill placing the succession in the Cabinet, and we feel bound to say that Senator Edmunds, the only opponent of its principle, never appeared to worse advantage than in the tone of his remarks upon this subject last week, in which he again justified, as he occasionally does, the sharp remark of a Yankee constituent, that "Edmunds might not be able to see a barn-door, but he would be sure to see a fly if there was one on the door."

The practical argument from our political history is equally strong in favor of changing the law in the way now proposed. In the first place, it has happened more than once, when a President or Vice-President has died, that the death of his associate on the ticket would have given the executive office until a new election could be held—which might be a period of more than a year and a quarter—to a representative of the party which was beaten in the Presidential election. The Whigs carried the election of 1848, but if Fillmore's death had followed upon Taylor's, a Democratic President pro tem. of the Senate would have become temporarily Executive. The Democrats carried the election of 1884, but if Cleveland were to die to-day—the Hoar bill not yet having passed the House and become a law—a Republican President pro tem. of the Senate would become acting President of the United States until March 4, 1889.

In the second place, experience has shown that, as an almost invariable rule, the Secretary of State is vastly better qualified to become acting President of the United States than the President pro tem. of the Senate. During the first half century of our national existence the Presidency was filled for almost two-thirds of the time by men who had previously served as Secretary of State—Thomas Jefferson, James Madison, James Monroe, John Quincy Adams, and Martin Van Buren; while almost all the other heads of the Department during this interval were men whose names are even at this distance recognizable as those of men who would have filled the higher station worthily. On the other hand, among the presiding officers of the Senate during this period, it is the rare exception to find a man whom even his contemporaries would ever have thought of as a possible President.

During the latter half of our history the contrast is equally marked. Although only one Secretary of State, James Buchanan, has reached the White House since 1840, almost every head of the Department has been the favorite of a large element of his party for the Presidency—as Daniel Webster, Lewis Cass, William H. Seward, James G. Blaine, and Thomas F. Bayard. Others, like Hamilton Fish and William M. Evarts, were never strongly pushed for a Presidential nomination, but almost without exception the secretaries have been men who were by common consent well qualified to discharge the duties of the higher office. The long list of Presidents pro tem. during this period, on the other hand, abounds in names which are either now entirely unknown to all but careful students of our political history, or are recognized as those of men conspicuously unfit for higher responsibility. It has even happened more than once that such a nonentity as Thomas W. Ferry has occupied the chair in the Senate Chamber for years, and thus stood in the line of succession to the Presidency.

It is perfectly natural that the average Secretary of State should be greatly superior to the average presiding officer of the Senate. The former's office has always been considered the chief place in the Cabinet, and the most distinguished men have gladly accepted it. The same men have generally considered the place of presiding officer in the Senate Chamber undesirable, and have willingly seen it occupied by a third-rate man, while they retained their more commanding and influential positions on the floor. It is true that such men as Thurman and Edmunds have sometimes accepted the office, but as a rule it has been filled by Senators of the second and third rank, while it has been the rare exception that the Secretary of State has not been a man of the first class.

It is a curious fact that the Congress which passed the act of 1792 regarding the succession, was only prevented from making the Secretary of State first in the line after the Vice-President by the jealousy which certain Senators felt regarding Thomas Jefferson's influence. James Madison was a member of the House, and, with other members of the convention which had framed the Constitution, he supported a bill, which passed the lower branch, making this provision. Madison took this stand in part because he doubted whether the President pro tem. of the Senate was such an "officer" of the United States as the Constitution contemplated for such a contingency, and a few years later his view was sustained by the famous decision in the Blount case that impeachment proceedings could not lie against a Senator, because he was an officer under his State and not under the national Government. The Senate would undoubtedly have concurred in the action of the House had not its Federalist members hated Jefferson so bitterly that they would not give "the King of the Romans," as he was then styled, a chance of reaching the Presidency by this indirect route. The Forty-ninth Congress, in passing the Hoar bill, will, therefore, only complete a work which the Second Congress would have accomplished nearly a century ago, except for the personal prejudices of a few Senators against the author of the Declaration of Independence.

FOREIGN LEGATIONS.

THE Keiley discussion will, we think, have one good result in strengthening the growing opinion that the sooner we get rid of our whole diplomatic service, properly so called, the better. What we need abroad is a first-rate consular service, which is easily within our reach, and which Mr. Bayard has taken one step toward securing by retaining many of the best consuls of the last Administration. We have only to make places in this service reasonably permanent, and open it to all candidates on the merit system, and reward superior knowledge and capacity by promotion, to supply us with all the permanent representation in foreign countries for which we have any use.

To say that our diplomatic service is useless is to speak very mildly of it. On the whole it is positively mischievous All our principal ministers are sent to countries in which the diplomatists form a professional corps, to whom the American minister comes as an amateur or outsider. Familiarity with the language of society in the capital to which they are accredited is one of their most ordinary acquirements. The American minister rarely knows any language but his own, and consequently gets but a vague and hazy conception on the European continent of what people about him are thinking or saying. Owing to this circumstance alone he seldom becomes really part of the society of the place, and his reports about the drift of opinion in it are commonly of no value.

What makes most trouble for him, however, is that he is sent to represent a government which recognizes no class distinctions and no class morals, to governments which are essentially class governments, and which are in the hands of social circles over whose doings and sayings certain social traditions have the force of law, and to whom American indifference to solecisms of behavior, and dress, and speech are odious and incomprehensible. In fact, the whole diplomatic system of Europe is still based on the assumption that all diplomatists belong, in mind, and manners, and ideas, if not in birth, to what in Europe is known as the gentleman class, and have all the prejudices, and requirements, and notions of all sorts—good, bad, and indifferent—of that class. In other words, European ministers, as a rule, still go abroad almost as much to represent the court circle of their own country in its purely social character, as the nation at large in its political character.

If the American minister tries to adapt himself to the usages of this society, and above all, to adopt its chief usage, its exclusiveness, he speedily finds himself in hot water with his own countrymen, who do not know what exclusiveness means, and rely on the Declaration of Independence to qualify them for the best

European circles. If, on the other hand, he refuses to do at Rome as Rome does, he is speedily set down as a boor, or "cuistre," in the society in which he lives, and receives no attention but those very frigid ones which official usage prescribes. The amount of heartburning which this state of things causes, and the ludicrous and contemptible scrimmages in which it involves our diplomacy, are well known to all Americans who have resided in any foreign capital. The trouble in which American ministers are involved in monarchical countries, for instance, by the passion which travelling Americans have for being presented at Court, is enough to turn their hair gray. In European countries a sifting process is performed at home, which makes the work of the minister in presenting his countrymen to foreign sovereigns easy enough; that is, no one is entitled to ask for presentation abroad who has not been presented at home; and to be presented at home he or she must have certain well-defined and provable qualifications. This rule applied to the American, however, would entitle all Americans over twenty-one to call on their minister, if they can make their way to London, or Berlin, or Vienna, to introduce them to the sovereign; and as foreign Powers would sooner go to war than submit to this, he has to do his own picking and choosing. From his own Government he gets no help. An American minister was recently compelled by positive instructions from the State Department, neither of them knowing anything about her, to present at court a woman of notoriously bad character, the reputed wife of a shady stock broker, and, as she was promptly found out, he had publicly to cancel his action.

If, taught by such incidents as this, the minister is cautious, he makes enemies by dozens, who go home and encourage Congressmen to denounce him as a "snob." If, on the other hand, he is compliant and makes himself popular with the American tourists by asking favors for them, he brings himself and the American people into odium and contempt in the very circle into which the tourists want to get, and in which he has to live, or try to live; for that circle cares nothing about the Declaration of Independence or the rights of man, and insists upon it that people who come to their houses shall eat and talk and dress and, to a certain extent, think like themselves. Then we are all familiar with that perennial row about the American minister's clothes. If he wears court dress, the excitement among the 60,000,000 whom he represents over this base flunkeyism becomes intense, and his case is taken up in Congress as that of a traitor. If he wears what is called "the simple garb of an American citizen," on the other hand, he makes himself singular and conspicuous on ceremonial occasions, and presents the somewhat ridiculous spectacle of protesting against monarchical vanities, on behalf of a great republic, by casing his legs in a pair of black-cloth trousers.

We need say nothing about the trouble and annoyance which diplomatic appointments give every new Administration. There is not a single interest of the American people served by having a minister at Vienna, Berlin, Paris, St. Petersburg, Rome, Madrid, Constantinople, or Lisbon. In not one of them does a minister render any service which could not be rendered by a consul. In every one of them his presence exposes us to social rows, like the Keiley affair, which discredit the American name by making us a little ridiculous. And yet the selection of people to fill these posts is one of the great difficulties of an incoming Administration, and, no matter how they are filled, makes it a score of enemies for each appointment, and sows dissensions in the party to which it belongs. These dissensions are made all the more bitter, too, by the fact that the women, who desire diplomatic appointments more than any others for their husbands, take a hand in them, and bear an eternal grudge to the old villain in the White House who refuses them their heart's desire. The whole diplomatic machine is, in short, in the present condition of European and American society, as far as we are concerned, an antiquated absurdity. It is designed to bring together two things which cannot be brought together—a thoroughly democratic society and an aristocratic one. The only place in which an American Minister is not out of place is London, and this is due to the fact that there, through community of language and political ideas, he reaches the people directly, and finds congenial society outside the official class.

THE NATIONAL GOVERNMENT AND SCIENCE.

The official science of the country is represented at Washington by a number of bureaus of which the organization, judging from the many attempts made to modify it, seems very unsatisfactory. Until within a comparatively recent time the work of the Coast Survey, the Naval Observatory, the Nautical Almanac Office, and the Smithsonian Institution represented the scientific activity at the capital. With the explorations undertaken under the auspices of the War Department to determine the most practicable route for a transcontinental line, a new era began, however, in the fields of geology and biology. Immense collections poured into Washington. These accumulations, added to those brought together by the United States Exploring Expedition under Wilkes, formed the nucleus of that mass of material which has grown, under the care of the Smithsonian, into the National Museum. Although the Land Office answered the demands of the public service fairly well, the necessity for a different sort of survey of the public domain soon became apparent, and the Geological Survey of the Territories was authorized by Congress; an Agricultural Bureau was added to the Department of the Interior; the Signal Corps was placed in charge of the War Department; and, finally, a Fish Commission was established, so that for the past few years the scientific activity at Washington has been something prodigious. It was, however, only natural that bureaus connected with the Treasury, the War, the Navy, and the Department of the Interior should to a certain extent clash and duplicate each other's work; and that a system in which the different divisions had grown up separately, without any plan of coöperation, should break down under its own weight. As a consequence, we now see the Engineer Department, the Hydrographic Bureau, the Geological Survey, all claiming their share of the work so well performed by the Coast Survey, and all willing to assist in the "partition of Poland."

It is not necessary to discuss the ability of the Engineer Corps or of the Hydrographic Bureau to perform the functions heretofore assigned by law to the Coast Survey. Some of the most eminent assistants of the Coast Survey have been engineer and naval officers. Should the Geological Survey be charged with a part of this work they would employ the very class of civilians who have made the Coast Survey what it is—a policy which was followed by the Engineer Department in the survey of the Great Lakes. It should undoubtedly be the policy of the War and Navy Departments to see that officers properly qualified are trained in scientific work for which they may have special aptitude. But the practice of these departments has merely been to detail an officer of the requisite rank for special scientific duty. The history of the Naval Observatory and of the Signal Service clearly shows the advantages and disadvantages of such a course. The training of an army or of a naval officer is necessarily that belonging to his profession; whatever else he may be, he is first of all a soldier or a sailor. While discipline and accountability are of the first importance in any scientific bureau, it is not requisite that army and navy regulations should be the guide for their administration. Nor should the chief be selected from men who cannot have learned what scientific work means. We cannot expect that men of eminent scientific attainments will submit to such regulations, or will serve effectively under chiefs selected merely for their administrative capacity.

To resign our scientific bureaus to the army and navy would be to remove them still further than they now are from public scrutiny and from scientific criticism, and subject them to the systems and methods of professions having little in common with scientific activity. To obtain the highest degree of efficiency in our bureaus we need men who are trained to their special work, and who will make it their profession. The Coast Survey needs a trained staff for the work of geodesy, topography, and hydrography. The Geological Survey must have its field work performed by men who understand their profession. The Naval Observatory must be conducted by astronomers, the Fish Commission by a biologist, the Nautical Almanac by a mathematician, the Land Office by a surveyor, the Signal Service by a meteorologist, the Hydrographic Bureau by a hydrographer, the Agricultural Bureau by a scientific agriculturist, the Smithsonian by a man of the broadest scientific sympathy. The heads of these bureaus must be able to select their assistants for their qualifications, they must be the judges of their proficiency, they should know of their own knowledge how well the work of their bureau has been done; and no amateur who takes his knowledge at second hand can hope to succeed. Unfortunately, men of science have frequently shown little aptitude for administrative work, and, to call their mistakes by no harsher name, have too

often forgotten the dictates of common sense. In their anxiety to benefit science they have incurred expenses with which the results obtained are by no means commensurate. They have encouraged a class of men clever in scientific cant, and ready to encourage any scheme as long as it was paid from the Government purse. We can hardly blame any honest Administration for appointing good executive officers as heads of bureaus, though it be sometimes to the great detriment of the character and quality of the work.

The question of the proper organization of our scientific bureaus is not an easy one to answer, as it involves the broader question of the relations of the central Government to science. The friends of a paternal government would like to see the science of the country centralized, and the work of the bureaus gradually absorbing all the best available men in their respective departments, making Washington a great scientific centre. While we undoubtedly have much to learn from the Old World, centralization of science can be carried too far. The contrast of France and of Germany, which represent the two extremes of administration, can leave us little doubt which we should take for our model. It would be a great disaster should Washington ever become the Paris of the United States. In Germany there are many scientific centres, and Government aid has not interfered with the development of individuality.

We may well begin by stating how far, in our opinion, Government should go in fostering scientific work in connection with its bureaus. We often hear that certain work can be done more cheaply, and that such a high degree of accuracy is not necessary. We take it for granted that no such shallow arguments will ever prevail, and that the Government, if it undertakes scientific work, will carry it on with all the modern refinements, even though their value be not always self-evident. In this country we have undoubtedly sinned in having spread our educational institutions too thinly over the country. In the course of time the weaker ones will disappear, and the hour is fast coming when we shall have a few healthy institutions, supported by the public interest of their constituency, from which we may expect the best literary and scientific work. At a first glance, the idea of a great university established at Washington in connection with the scientific bureaus, and backed by Government resources, is very dazzling; but is it wise for the Government to enter directly as a competitor into the field of higher education, except in the training of army and naval officers? We need hardly ask how long the administration of such an institution could be kept out of politics. The past history of our scientific bureaus has been such as to suggest nothing but disaster from the centralization of science at the capital. With the present capacity of some of our bureaus for indefinite expansion by constantly encroaching upon the field of individual activity, the time is fast approaching when no man of science, and no university even, could hope to attack many of the problems naturally within their scope, without at once seeing the same work undertaken by the directors of official science, with far greater means and apparently boundless facilities for publication. This would be merely an ephemeral gain for science, obtained at the sacrifice of the intellectual activity of the country. Moderate centralization, allowing of great competition, is the ideal of scientific activity, and the Government should limit its support of science to such work as is within neither the province nor the capacity of the individual or of the universities, or of associations and scientific societies. Official science should work in harmony with the educational institutions of the country, and should not be allowed to adopt a course which will inevitably kill them off.

If, in the course of its work, any bureau finds it important to undertake a special investigation beyond the reach of a private institution, the necessary means can be granted by Congress, and the men best qualified should be employed to carry it out. The Government should not keep a school for original research, and it is not advisable to see established at Washington laboratories of chemistry, physics, and biology, etc., etc., intended only for such work as can be performed elsewhere for the Government by the most eminent men in their departments, at comparatively little cost. The Government should employ as experts the men needed to supplement the permanent staff of any bureau, but it ought not to go into the business of keeping on hand specialists for every conceivable emergency. Such men can be obtained when needed, and for the chance of completing any interesting scientific investigation with ample means at their disposal, they will be only too glad to work for a fraction of the salary paid to a permanent official. With such a limitation of the work of the scientific bureaus at Washington, the influence of Government aid would spread in all directions and be felt in every institution noted for its men of science, irrespective of locality.

To secure the necessary unity and continuity in the work of the various scientific bureaus at Washington they should be placed in charge of one of the secretaries, or of a single head corresponding to a certain extent to the office of Minister of Education and of Public Works. It should be the business of this official to represent the claims of the bureaus before Congress, and to approve the plans of work annually prepared by the special bureaus. The chiefs of the bureaus ought not to spend their time in securing the appropriations necessary to their departments; they should devote it to securing for their administration the greatest possible efficiency. The advice of the National Academy of Sciences is always at the service of such an official head, who would find it far easier to obtain, as an individual, the opinions of scientific men than can be done by Congressional committees.

The chiefs of the bureaus could thus be held to the strictest accountability without interfering in the least with proper scientific activity. Should, furthermore, the secretary in charge prepare an annual report, giving a summary of the results obtained by the various bureaus, the criticism of those interested would call attention to the good and bad points of his administration. Great care should be taken not to include too many things under this scientific management. Nothing should be done to interfere in any way with the strictly professional bureaus in charge of army and naval officers, which may safely be left to the care of the properly qualified officers. There is no reason for interfering with the appointment of boards, permanent or otherwise, whose functions are limited by law to special objects which may require the appointment of scientific men specially trained in certain directions. It is hardly necessary to enumerate these bureaus and commissions; they will naturally suggest themselves as representing the interest taken by the central government in questions affecting the general welfare—the care of public property, the erection of public buildings, the improvement of harbors and rivers, the lighting and defence of the coast, and a vast number of other topics connected with statistics, weight and measure, coinage, the Patent Office, etc., etc., for all of which men of considerable specific scientific knowledge are required. With the present specialization of science, the difficulty of finding men properly qualified is constantly becoming less, and surely in this number of specialists some eminent men will be found who will acquire the necessary sympathy with good work in fields not their own, and who will prove themselves worthy to be the scientific advisers of the Government. Add to this the application of the ordinary rules of business and of common sense to scientific matters, and we cannot fail to obtain a creditable administration of the scientific work of the Government.

BOYCOTTING.

The statistics of boycotting published in the last number of *Bradstreet's* furnish a chapter of commercial intelligence which no employer of labor can read without more or less agitation. The peculiarity of boycotting—that which gives it the greatest efficiency, and without which it would attract little attention—is that no man can protect himself against it merely by standing well with the trades union, complying with its rules, terms, prices, hours, etc. "To boycott a concern," says one of the leading advocates of the system, "simply means to refrain from having anything to do with it. You boycott a dry-goods firm by refusing to deal with it; you boycott a newspaper by refusing to buy it; you boycott a cigar-maker by avoiding his cigars." *Bradstreet's* statistics do not justify this definition. They prove that boycotting goes much beyond this, and that the cases where the practice has been confined simply to "refraining" have been rare indeed. Take a noted instance, that of the boycott on the New York *Tribune*. Refusing to buy the *Tribune* or to advertise in it would be boycotting according to the authorized version. This is what every dissatisfied reader and advertiser does. The *Times* was boycotted in this way during the last Presidential campaign by the supporters of Mr. Blaine. But *Bradstreet's* says that the *Tribune* boycotters boycotted a lot of business firms with whom they had no quarrel, in order to force them to desist from advertising in the *Tribune*, viz.: Rogers, Peet & Co., R. H. Macy & Co., the Royal Baking Powder Co., James Pyle & Sons, Hugh O'Neill, Stern Brothers, and Horace Waters & Co. In some cases these firms obeyed the behest of the boycotters, and in others not. In Pittsburgh the boycott of J. Kaufmann &

Bros. took an opposite direction, sundry newspapers being boycotted for publishing their advertisements, and a street-car line for carrying their advertising card.

Another case is that of the Fifth Avenue Hotel. The boycott "takes the form of waylaying public men and others when stopping at the hotel, and requesting them to go elsewhere at the penalty of being boycotted at the polls or in business." Circulars are sent out to persons known to have stopped at the Fifth Avenue Hotel threatening them with a boycott if they continue to patronize that place of entertainment. Another notable case is that of Heurich's brewery in Washington city, the history of which we copy in full:

"Heurich was and is the largest and wealthiest brewer in Washington. He had just completed a new building for his brewery at a very large cost, and was putting up some private dwelling houses. The builder with whom he had entered into contract employed non-union laborers in their construction. The Knights of Labor demanded that Heurich should annul that contract unless the builder consented to employ union men. Heurich refused, said he had $80,000 in the bank, and would spend every dollar of it rather than submit to such dictation. He then left for Europe, and a boycott of his beer was proclaimed and very widely enforced. From Europe, acting on misinformation, as is now said, Heurich telegraphed a despatch which was construed as a surrender to the boycotters, whereupon the boycott, by public notice, was raised. In the meantime Heurich had reduced the price of his beer to about cost, thus underselling all the other brewers and agents in the city, and a general reduction of wages was threatened. On Heurich's return from Europe a paper was presented to him by the union to sign, and he peremptorily refused to sign it, or to pay the costs of the boycott, which he was also asked to do. And there the matter rests, the labor organizations hesitating to renew the boycott for fear that Heurich will continue to cut prices, and thus cause a reduction in the wages of labor in all the other breweries in the city, and Heurich declining to make any concessions until all threats are withdrawn."

The statistics furnished by *Bradstreet's* show that 237 boycotts have been ordered in various parts of the country since the fashion came in, that 99 have been successful, that 24 have failed, and that 114 are "still on." Excluding Chinese boycotts, the proportion is less favorable, the successes claimed by the boycotters being 59 out of a total of 196, against 23 failures and 114 doubtful experiments. In nearly all the cases where the facts are summarized the boycott has gone much beyond the authorized definition, and has taken the form of dragooning the public to side with the boycotters. In some cases business firms against whom there was no boycott have been compelled to sell goods under a stamp affixed by the boycotters, in order to prevent the sale of boycotted goods.

It becomes plain from the most cursory examination of the cases narrated that boycotting would be ineffectual if it were narrowed to the range of Mr. Swinton's definition. In some cases it might accomplish its end if it were limited to merely "refraining" from buying the goods of a boycotted firm, but these would be so few in number that the boycotting would attract very little attention. When it passes from the passive to the active state and reaches out to bystanders, saying to them, "You must fight on our side whether you want to or not—all who are not with us are against us," it becomes a powerful social and commercial agency, which society and commerce are bound to take notice of and to take sides upon, sooner or later. No exceptions can be taken to the lawful endeavors of workingmen to improve their condition. On the contrary, they are to be encouraged in every way. Combinations to advance wages and to shorten hours are all right. This is a free country and a free age of the world. Let every man do the best for himself, whether single-handed or in combination with others. Boycotting is a combination of the employed on the one side against employers and the unemployed on the other. The employer has a difference with his workmen—no matter what it is about, whether wages, hours, regulations, or personal pique. There are men willing to work on his terms; so he insists on them. The union orders a strike, the new men are taken on, the union orders a boycott, and straightway issues orders to A, B, C, and the whole alphabet from Maine to California not to buy the goods of the boycottee. If anybody buys them after due notice, he is boycotted also, and the whole alphabet is notified of the second boycott and held responsible for its enforcement.

Of course such a system of meddlesome tyranny must come to an end, but it will not stop of its own accord. The combination of the employed against the employer and the unemployed must be met sooner or later by a counter combination. So long as the trades-unions restricted themselves to fair dealing, or to boycotting according to the avowed meaning and original definition of the term, there was no call for any counter combination; but when it takes the attitude and spirit of a Malay running amuck through an innocent crowd, society must protect itself at any cost.

ENGLAND: TENSES AND MOODS OF THE GENERAL ELECTION.

LONDON, December 8, 1885.

THE way in which a general election is conducted here makes it singularly exciting. In America your Presidential election is decided by one day's voting over the whole country. In France the first polling for members of the Chamber takes place on one and the same day everywhere, and the second polling, which follows in cases where no candidate has obtained an absolute majority, is also held at the same time everywhere. Thus in America the interest is concentrated on a single day, in France on two days, separated by an interval lasting for two or three weeks. But here, though each constituency finishes its polling within twelve hours of the same day (8 A. M. to 8 P. M.), the whole process of taking the opinion of the country lasts over more than a fortnight. Our first day of polling this year was November 24; the last, that in the remote island group of Orkney and Shetland, will not be taken till December 13. Thus the general election is like a race over a long course, in which sometimes one horse gains, sometimes another, and the mind of the spectator is kept under the strain of constant and excited suspense from start to finish. We seem to have lived through a year of hopes and fears, of exultations and regrets, of conjectures falsified almost as soon as they were uttered, of appeals and remonstrances that seemed to drive the electors the opposite way. Since this day fortnight, when the first ballots were cast in the English boroughs, the excitement was continuous day and night, for the counting of the votes sometimes began at 8 P. M., when the polls closed, sometimes next morning; and according to the size of the constituency the declarations of the results were made earlier or later, and reported by wire over the three kingdoms at every hour out of the twenty-four.

Looking back over the fortnight, one can distinguish three or four marked stages in the contest when victory seemed to be deciding itself for one or other party.

The first was that of the 25th and 26th of November, when the results of the pollings in a large number of the English boroughs held on the 24th and 25th were announced. These went largely against the Liberals. It was not so much that they were left in a minority on the result of those two days' work, but that they lost a number of seats where they had deemed themselves secure, and which might be regarded as typical. Such were the London boroughs, and still more the Lancashire boroughs. Well-informed men knew how weak the Liberal hold was on the latter, but were not prepared for the Tories carrying eight seats out of nine in Liverpool, the ninth going to a Nationalist, and five out of six in Manchester. The *Times*, which had suddenly gone over to the Conservative side (in substance if not professedly) just before the election began, now predicted a Conservative victory, and the exultation of the regular Tory journals at the defeat of the Radicals was unbounded. The faces of the latter grew longer and longer as the same news of defeat came from one English borough after another, and they wished more than ever that the counties could have polled first.

The next two or three days, while continuing the tale of disaster in England, brought Scotch voters more into the field, and revived by Scotch successes the drooping spirits of the Liberals. It was known on the 27th that Glasgow had given them all her seven seats, as Edinburgh, Dundee, and Aberdeen had just before given all theirs (eight in all); and of several Scotch counties, whose polls were announced on the 28th, the majority went the same way. The enormous majority which Mr. Gladstone obtained in Midlothian struck the country, and at the demonstration, held in his honor in Edinburgh on the 28th, just after the poll was declared, a mighty effort was made to cheer up the party, and assure it that it might still win by the help of Scotland and the English county divisions. The Tories, however, were by no means disheartened. They expected to maintain their advantage, and, in fact, began to turn against Mr. Gladstone his favorite argument that a strong government was the one thing needful, by insisting that since the Liberals could not now form a strong government, moderate Liberals and hesitating people generally ought to go for Lord Salisbury, who was actually in power, and had the best chance of getting a majority.

This second phase, during which the Liberals had regained while the Tories had not lost hope, the numbers of members of both parties returned being very nearly the same, continued till Wednesday, December 2. On that day the results of polling in a large number of British counties were declared, and these showed a decided majority for the Liberals. In fact, the Liberal reserves came into action just a week after their first line had been shattered. Though somewhat damped by the reverses of that first line, the county Liberals fought doggedly, and drove back the Tories in the east and southwest of England as well as in the populous districts of Yorkshire and the North. During the days that followed, the Liberal majority over the Tories crept up steadily, and the Liberals began to hope for a victory which should leave them complete masters of the field, while the Tories fell back on contrasting the verdict of the ignorant, newly-enfranchised county voters with that rendered pre-

viously by the borough electors who have enjoyed the franchise since 1867.

This third phase of the struggle may be said to have lasted till Saturday, the 5th, or Monday, the 7th of December. By the latter day, although it was clear that the Liberals would have a decisive majority over the Tories—a majority due to Scotland, to Wales, and to the English counties—they could not obtain a substantial absolute majority of the whole House of Commons. For Ireland, where the battle was joined later than in Great Britain, had now begun to show a result disastrous to both the English parties, but more disastrous in its effect on the prospects of the Liberals. Their party in that island has been, so far as representation goes, wiped out. All the moderate Home-Rulers from the south and centre of Ireland who supported them in the last Parliament, have been replaced by Nationalists whose fidelity to Mr. Parnell is assured by the stringent pledge they have given. In Ulster every candidate of the old Whig party, which had held its ground for fifty years and had developed new strength in 1880, has been defeated either by a Tory or by a Parnellite; and Mr. Gladstone has now, after all he has done or sought to do for the Irish people and for the cause of civil and religious equality there, not a single follower from the whole island. It was plain enough to those who knew anything of Irish affairs that this would be the case. But the English know so little even now of Irish affairs, and find it so hard to believe that a thing will happen until it has happened, that the result took most Liberals by surprise, and brought them slowly and dolefully down from the hopes with which their victories in the second week of the election had filled them. This is the fourth and last phase, in which both Tories and Liberals retire to their camps in depression and disgust. As the smoke of battle clears away it is seen that the victors are also vanquished. It profits the Liberals little to have repelled the Tory attack, when the Tories have in Mr. Parnell an ally by whose help they can outnumber the Gladstonian party. At this moment the numbers stand 320 Liberals, 248 Tories, and 73 Parnellites, with 29 seats still undecided. The Liberals are therefore only one behind the combined forces of Tories and Parnellites, and this result cannot be greatly varied by the remaining elections. Now, no English Minister can carry on business with a majority in the House of Commons of less than twenty; and a Liberal Minister who is sure to have among his adherents some ready to desert on a slight pretext, cannot be safe with less than thirty. It is therefore clear that Mr. Gladstone could not take office with a hope of retaining it unless by the support of Mr. Parnell, and Mr. Parnell has just done all he could against the Liberals by directing the Irish electors in England to vote against them—a direction which had determined the issue in about twenty constituencies. The Tories, on the other hand, would, even with Parnellite assistance, find it hard to get along, since the combined Tory and Nationalist vote in the new House will scarcely exceed that of the Liberals. Thus both parties are disheartened. The Tories, though they have reduced the Liberal majority, leave the field beaten. The Liberals, though still far stronger than the Tories, are weaker than they were in 1880. The only party that have cause for jubilation are the Parnellites, and they are jubilant indeed, having effaced the Irish Liberals, and driven the Irish Tories into the northeast corner of the island.

Apart from the interest given to it by the swift and sudden fluctuations of success between party and party, this general election has not been fertile in dramatic incidents nor in brilliant efforts of eloquence. Lord Salisbury, as a peer, has had few opportunities of speaking. Mr Gladstone's campaign in Midlothian was less striking than that of 1880. His oratorical power has scarcely, if at all, declined, and the marvel that he should retain it at his advanced age is greater now than then. He was received by the people of Scotland with all the old enthusiasm, but the task of expounding a moderate programme, defending the conduct of his late administration, and urging on his party the paramount necessity of unity, gave far less opening for rhetorical effects than the impeachment of the Beaconsfield Ministry supplied in 1880. His appeals succeeded to some extent in healing the internal dissensions of the Liberal party, though these dissensions have cost it seven or eight seats, but they came too late to reassure many of those timid politicians whom the Radical orators had alarmed at an earlier period of the canvass. Lord Hartington has continued to speak at intervals through the fortnight, the chief importance of his deliverances lying in the censure, moderate but distinct, which he pronounces on those of his late colleagues who have gone too far in their promises to the masses, while Mr. Chamberlain, on the other hand, has declared that the election would have turned out better had his tongue and the tongues of his friends been less restrained by Mr. Gladstone's official programme. These little recriminations do not augur well for the future unity of the party; and to remark them is the chief consolation which the Tories find in their defeat which at one time seemed so nearly a victory.

Both parties have fought well, but the Tories probably better than the Liberals. A new feature in their canvassing has been the participation of a large number of ladies, particularly of the so-called "Dames of the Primrose League," an institution founded in honor of Lord Beaconsfield, to defend, as its promoters profess, the institutions and imperial greatness of England. Till just before the polling began, there was not much excitement in the country, and all through it has been excitement rather for party than for principles. However, feeling ran so high that if we were still in the old days of open voting, there might have been serious riots. As it was, each side frequently interrupted the meetings of the other and mobbed its candidates. Ireland, where one might have expected disorder to be worst, was quieter than England, partly, perhaps, because the supremacy of the Nationalists was so unquestioned through three-fourths of the country. So far as can be ascertained, the new Corrupt Practices Act has worked well in diminishing a candidate's expenses as well as in preventing bribery. Some seats will be the subjects of a petition, but far fewer than formerly when one considers that the number of contests is now very much greater than it used to be; a mere handful of seats, chiefly the university seats, being allowed to go unfought.

In the forecast which I sent to you a fortnight ago, the error, and, so far as I recollect, the only error of consequence, lay in underestimating the strength of the Tory party in the English boroughs, and especially in London. It was then believed that the two parties would be pretty equally divided in the boroughs generally, and that the Liberals would carry at least a half of the London seats. The result has shown a slight superiority of the Tories in the boroughs at large, and a more marked superiority in London. The causes of this result, other than the Irish vote, which was allowed for, but not quite sufficiently allowed for, are an interesting subject of inquiry. But they deserve a letter to themselves.

Y.

THE IRISH ELECTIONS.

DUBLIN, 12th December, 1885.

THE elections are over, and the Nationalist victory has been more complete than was predicted by any except Mr. Parnell and some of the best informed of his immediate followers. As the *Pall Mall Gazette* says: "We have just enfranchised a nation. That nation, speaking with unanimity unparalleled either in its own history or in the history of our own country, demands first and foremost the right of self-government." Of the 103 representatives to the Imperial Parliament 85 are Nationalists and 18 Conservatives. There has not been a single "moderate Home-Ruler" or a single follower of Mr. Gladstone left upon the board. Munster has returned 25 members, all Nationalist; Connaught, 15 members, all Nationalist; Leinster, 28 Nationalists, and 2 Conservatives elected by Dublin University; Ulster, 17 Nationalists and 16 Conservatives. Of the 32 counties 27 have gone entirely National, 4 partly National and partly Conservative, and one (Antrim) entirely Conservative. A glance at the map of Ireland will show that, with the exception of Dublin University, all the Conservative members have been returned by the small extent of country lying northeast of a line drawn from Carlingford Lough to Lough Foyle, and immediately surrounding Lough Neagh. The Irish people have, as it were, reconquered their country, sweeping away all the old landmarks of plantations, settlements, grants, and confiscations, except those in the tenacious grip of the Scotch-Puritan settlers. Considering the country with regard to Catholicism and Protestantism, the Catholics (as Nationalists) have carried six more seats than their proportion of population would give them. The Nationalists confidently counted upon an easy victory in most of the constituencies, but in this they were mistaken. The Unionists showed fight under the guidance of the "Irish Loyal and Patriotic Union," which called Catholics and Protestants together under a banner upon which were inscribed the maintenance of the Legislative Union, opposition to the continuance of the agitation which has convulsed the country for so many years, reasonable reforms, immediate attention to the amelioration of the lot of the artisan and laboring classes, and which wound up its appeal with: "God save Ireland and the Empire." The National League protested against the intervention of this body in the elections as "fractious" and "unpatriotic"; but we have no reason to suppose that the action of the Union was other than honest. One of its most influential counsellors was a son of W. Smith O'Brien. The funds to meet the heavy outlay incurred by the I. L. P. U. were subscribed partly by Irish landowners and merchants, but, it is supposed, mainly by the London companies having estates in Ireland and by the Carleton and Reform Clubs.

In the contests, except in Ulster, the ordinary demarcations between Liberal and Conservative, Whig and Tory, were forgotten. It became entirely a question between those who desired self-government for Ireland and those who favored legislative union and the *status quo*. The I. L. P. U. supported all candidates alike against their opponents. The man who was supposed to be strongest for the fight in each Parliamentary division was selected. And the same speakers—Liberal and Conservative—might be heard upon alternate occasions, supporting now a Liberal, and now a Conservative candidate, against the common enemy. Upon the whole, the Irish elections were conducted with much more good humor than the elections in Great Britain, and the expectations of those who urged the quieting and dignifying effect of an extension of the franchise were fully justified. There were but twen-

ty-four unopposed elections; and the constituencies having been brought to the test of actual numbers has strengthened the position of the Nationalists by showing the numerical weakness of their opponents through the south and west. Southwest Meath, 3,618 National to 200 Unionists; North Cork, 4,982 to 102; South Mayo, 4,953 to 75; South Kerry, 2,742 to 118; South Tipperary, 3,572 to 122; East Kerry, 3,169 to 30, are the most striking examples of somewhat similar results all over the country. As the Unionists have been demanding a public audit and disclosure of the accounts of the National League, so are the Nationalists now demanding the same of the accounts of the I. L. P. U.; and neither party is likely to be gratified.

Those who had ample opportunities of forming an opinion, and who were believed by themselves and others to be authorities in the country, have been proved to be mistaken in their expectation that many constituencies would separate from Mr. Parnell upon side issues. It was believed that the party of the laborers would be of some weight in contradistinction to that of the farmers—a party which Mr. Villiers Stuart, a landed proprietor on the Blackwater, has been diligently working up for some time past: Mr. Villiers Stuart was defeated in East Cork by 266 votes to 4,314 cast for Mr. Lane, a butter merchant. It was thought that independent Fenian candidates would be started and carried in some of the western counties: in West Mayo, where there are fewer National League branches than in almost any other part of Ireland, the National League candidate was put in by 4,790 to 131. In some of the central districts, where the farmers' general policy of "no hunting" has told hardly on the laborers and those who raised horses' provender, and where there was known to be considerable jealousy of outsiders among local Nationalists, it was thought Mr. Parnell would have a hard fight: in North Kildare, the Baron de Robeck, a popular country gentleman and good employer, was defeated in a majority of 3,168 to 467 by Mr. Carew, a professional man living in London. It was surmised that old associations and family ties would carry weight: Daniel O'Connell, grandson of "The Liberator," who occupies the family domain of Derrynane, and who strove to strengthen his position by joining the League and offering to take the pledge a few weeks ago—too late—received only 118 votes, against 2,742 cast for Mr. O'Connor, Lord Mayor of Dublin, a bar-keeper and without ability, a wealthy man and a sincere Nationalist. As for The O'Donoghue, once a popular leader in Kerry, but who has held aloof from Mr. Parnell, he was not heard of at all. If any man in Ireland was believed to have a constituency "in his pocket," it was Mr. Callan, who has represented Louth for years. He had been in Parliament as a Nationalist since Mr. Parnell was a young student, and technically in and out of Parliament he was always on the "right side." Mr. Parnell, however, for good reasons "could not recommend him" to the County Convention. Mr. Callan refused to submit to the decision of the Convention (the only instance of rebellion in the National ranks); he was supported by a considerable number of clergy and laity, and was defeated by Mr. Nolan, a London lawyer, the nominee of the Convention, whom "no one ever heard of before." Sir Edward Cecil Guinness is perhaps the richest man and the largest, best, and most considerate employer in Dublin. His family restored St. Patrick's Cathedral, and may be said to have presented a beautiful park to the citizens. The division of Dublin, which for months past he had arranged to fight, comprises the most aristocratic quarter, and was supposed by the Conservatives to be almost safe for them; yet he was defeated by a majority of 1,900 by Mr. Gray, proprietor of the *Freeman's Journal*, who was in the field only for a fortnight.

All this shows the amazing hold of Mr. Parnell upon the country, as representative of certain ideas and principles; and any one is much mistaken who anticipates that Irish antagonism, no matter what forces are opposed to it by England, will permanently cease until certain ends are attained. It is surprising how national feelings and tendencies have swept everything before them. Nationalists who appeared entirely alienated by Parnellite methods in and out of Parliament, who declared that the "game was up," "the fat all in the fire," came forward again as workers. This return change, if so it can be called, was no doubt helped on by the additional prestige given to the cause by the appointment of a Catholic Archbishop of Dublin, pronouncedly National; and to a considerable extent by Mr. Parnell again putting forward Nationality as his main and central object. A Protestant who some months ago was cited to me by an old Nationalist of wide experience, as a man typical of a class who had been alienated by the action of the party, is now member for a southern constituency. Mr. Parnell's policy all along has been to stand fast—not to criticise, question, or impose conditions upon any who were willing to work with him, or to ostracize any who had cooled for a time. And this policy has been entirely justified by the result.

As to the religious demarcations, the lines are drawn pretty much as they always have been since the Union. Some four Protestant Nationalists (besides Mr. Parnell) have been returned by almost purely Catholic constituencies. But, so far as I know, they are Protestants who have almost merged their identity as Protestants in National politics. They are not Protestants fully in touch with Protestant thought generally, as were Mr. Mitchell Henry, Mr. Shaw, Mr. Blennerhassett, and other Home-Rulers, who were in the last Parliament, but who have now disappeared from the Irish stage. In the contests for the six seats in Dublin County and city, only three Protestants appear to have taken any public part on the Nationalist side—one by nominating a candidate, the others by speaking at public meetings. Some prominent Catholics sided with the I. L. P. U. Upon the other hand, the returns show that in districts throughout the country an appreciable number of Protestants must have voted on the National side, and there are signs that some at least of the Protestant students in Cork and Dublin have imbibed National ideas.

Mr. Parnell has now a carefully selected and well-tempered weapon to his hand. Doubtful or inefficient members have been cast aside. The party is mainly composed of men who will not speak or show much, but who will vote solid and sure. Forty-five of them are new men; many of them are unknown; many of them are poor, and will have to be supported in London. Many of them are not very cultivated. Twenty-five of them smart under imprisonment without trial in coercion times, or still more from sentences of penal servitude. One was sentenced to be hung. Taking them as a whole their moral tone is high, and their aims are not personal, but what they believe to be for the good of their country. They will work free of British public opinion. The pre-Parnellite Irish members were associated in sympathy in many ways with their British brethren by education, by relationship, by companionship. They read the same papers, and lounged, dined, and played cards together at the same clubs. The chasm between the National and British members is now complete. A hint from the *Freeman's Journal* or *United Ireland* will weigh more with any one of them than all the thunders of the *Times* or the pleadings and denunciations of the *Daily News* or *Standard*.

The state of things is strange and anomalous. Wise and statesmanlike self-government by a party thus nominated and elected, not chosen by the independent judgment of the constituencies, would appear difficult. It is an instrument better suited for destructive than for constructive statesmanship. Similar complete and unquestioning accord has upon previous occasions in Irish history not produced the most permanent benefits—as Grattan's supremacy over Flood and others; and O'Connell's absolute sway. But there are no Floods or Duffys now in Irish national politics. Mr. Parnell and his lieutenants occupy the whole field.

The most confident anticipations are entertained and expressed by Nationalists as to a speedy settlement of the Irish question. The appeals of the *Pall Mall Gazette* for such a settlement to the Liberal party and the British public are highly significant. Yet I find it almost impossible to believe that our wishes will be soon fulfilled. I trust disappointment may not lead to bad blood. The land question seems really to dominate all others. Were it satisfactorily arranged, the difficulties regarding national self-government in union with Great Britain might quickly be smoothed over. What chance is there at present of a land settlement? Is it at all probable that the Irish people would accept any scheme of local government which omitted the power to legislate regarding land? And suppose the speeches of the leaders, and the spirit shown at public meetings and by public action, to express the true working sentiments of the Irish people upon the subject, what chance is there of the British majority delivering over the owners of land in Ireland (comparatively few as they may be) to the uncontrolled fiat of the majority of Irishmen?

D. B.

THE BULGARIAN REVOLUTION REVIEWED.

PARIS, December 3, 1885.

It was agreed at the last imperial interview at Skierniewice that the great Powers should not allow themselves to drift into war by any incident connected with the Eastern question. In order to attain this object, the sphere of influence of each Power was defined; it was agreed that, as Bosnia and Herzegovina were occupied already by Austrian troops, the new kingdom of Servia should fall and remain in Austria's sphere of influence. Bulgaria, on the other hand, fell into the political domain of Russia. The *status quo* was recommended to all parties in the interests of peace, for it is the firm intention of the person who can be said to control at present the affairs of Europe, that peace shall not be disturbed during the last days of his sovereign, who has achieved enough in his lifetime to desire rest.

It was clearly everybody's interest that the agreement of Skierniewice should be respected. I mean to say that it was the interest of all the great Powers. Germany herself is completely disinterested in the Eastern difficulties. She has no provinces to gain, no commercial advantages to secure; Austria is establishing her influence in Bosnia and Herzegovina, and can wait till the railways are built in Servia which will some day establish communication between the Hungarian railroads and the railroads of Turkey. She has her eyes fixed on Salonica and the Ægean Sea, but she is in no hurry; she can wait till the apple falls from the tree. As for Russia, she is content for the present to reëstablish her finances, and to make an extraordinary advance in Turkestan. The present Emperor is not disposed to run again the risks of a great war with Turkey, at the cost of a quarrel with England and perhaps with Germany. It is enough for him

that the moral influence of Russia should be felt in the provinces which have become of late years independent of the Porte.

The peace programme was observed by all, when suddenly a revolution broke out in Rumelia, and Prince Alexander of Battenberg was called upon by the Rumeliotes to place himself at the head of a Great Bulgaria. Everybody remembers that this Great Bulgaria was one of the desiderata of Russia at the Congress of Berlin; that Lord Beaconsfield placed himself at the head of the opposition to this wish and succeeded in keeping Eastern Rumelia separate from Bulgaria, and under the direct sovereignty of the Porte. Prince Alexander Battenberg had been chosen Prince of the new-born State of Bulgaria. I have heard it said that he had some hesitation, paid a visit to Prince Bismarck, and asked his advice: "Go, go; it will always be something to remember, to have been Prince of Bulgaria." The Prince accepted the ironical advice; he belongs to the class of princely *condottieri* who have always been found in Germany. Some of these princes, such as Bernard of Saxe-Weimar, attained a great place in history. In modern times, the German princes have more often made their fortune by marriages than by war; they have not always the choice. In a little Latin poem which showed how some nations gained provinces by the help of Mars, the poet, addressing himself to Austria, said: "Tu felix, Austria, nubes." One of the brothers of Prince Alexander of Battenberg has just entered the royal family of England by marriage. As for Prince Alexander, he is still a bachelor. I have heard it said that a very wealthy Russian Princess would not marry him, and, on account of his morganatic origin, a Princess of a ruling royal family was refused him. He was determined, it seems, to make himself more weighty in the Olympus of Princes; and, when the patriots of Rumelia asked him to add Rumelia to Bulgaria, he boldly threw himself into the revolutionary movement; he proclaimed Bulgarian unity in the face of all the great Powers. He remembered probably how Moldavia and Wallachia, kept separate at first after the Crimean war, were afterward united, and how the Rumanian principalities grew into the kingdom of Rumania. Brought up a soldier, he was determined to use the sword rather than to yield to timid advices.

It was thought at first that his enterprise would end in a deplorable failure. The Russian Government, disturbed in its quietude, showed great anger; and the Emperor went so far as to strike the name of Alexander of Bulgaria from the list of his honorary colonels. All the Russian officers who had of late years organized the Bulgarian army were recalled, and this army was left without any generals and without any colonels. It seemed as if Russia had been seized with a sudden revulsion of feeling; as if she would not remember all she had said about Bulgaria at the time of the "Bulgarian atrocities"; as if she gave up her natural alliances and aspirations. The severity displayed toward Prince Alexander astonished the world: it seemed uncalled for, exaggerated, inspired by an uncontrollable jealousy of England, which at once expressed some sympathy for Prince Battenberg. Things change rapidly in our time; compare the language held by Lord Beaconsfield and the language held by Lord Salisbury on this same Bulgaria.

Prince Alexander was abandoned by all the courts of Europe; a conference was assembled, and it seemed at one time as if he would become a diplomatic scapegoat. Many plans were proposed for the settlement of the difficulties in the Balkan peninsula; at the end of all these plans was the sacrifice of Prince Alexander himself. Help came to him from a very unexpected quarter. King Milan of Servia could not bear the idea of a greater Bulgaria; he asked for a compensation, spoke of the equilibrium of the principalities of the Balkans destroyed or endangered, and, declaring war on Bulgaria, entered the Bulgarian territory. It was a sad spectacle to see these two Christian States, hardly emerging into life from a long period of slavery under Ottoman rule, using their new liberty in a fratricidal war. King Milan assumed a great responsibility. He had no good pretext for a war; he had surrounded himself during recent years with a sort of military *camarilla*, which had persuaded him that his army was perfect, that he was to be the greatest sovereign in the Balkan peninsula, that everything would give way before him.

The first act of the war ended in his apparent triumph; the Bulgarians met at first with some reverses. But they had a good cause, for their country had been invaded, and they had a good general in the person of Prince Alexander. Educated in the Prussian school of strategy, the Prince saw at once the weak point of his adversary; he inflicted on the Servians a terrible defeat, then followed them closely, and did not rest till he was himself on Servian soil. He inspired his army with a sort of enthusiasm, fought like a soldier on every occasion, and his adversary was very soon completely routed and disorganized.

At this moment of the drama, Austria stepped in. Count Kálnoky, in the last speeches which he had made before the Hungarian Delegation, prior to the opening of hostilities, had passed a very severe censure on the Bulgarians, and denounced Bulgaria as the country which had been the most unwilling to obey the prescriptions of the Treaty of Berlin. Without openly inciting Servia to war, he had certainly shown much partiality for this kingdom; he had spoken in flattering terms of King Milan. The Servians considered the words of Count Kálnoky as a positive encouragement, and though they were at the last moment officially warned that if they declared war, it must be at their own risk and peril, they felt that in case of a defeat they could always fall back on the protection of Austria. They were not mistaken. An Austrian Minister went to Prince Alexander and stopped his victorious advance by a note which was very imperative, and couched in the style of an ultimatum. Austria asked Prince Alexander to consent to an armistice; the Prince could not do otherwise than accept this proposition, which was made in the name of all the great Powers. He could with a good grace, after having defeated the invaders of Bulgaria, accept the propositions of such a mighty empire as Austria.

The armistice is only for ten days, and Austria's moral support has naturally given Servia breathing time, and has increased the pretensions of King Milan and his people. Servia speaks already as haughtily as if she had been victorious, instead of having been vanquished. The King, who has shown himself as incompetent in war as his adversary has shown himself brave and skilful, refuses to admit any of the demands of Bulgaria; he will not even hear of paying a war indemnity. His army is reinforced, and is preparing for a new struggle.

The position of Prince Alexander may become again very difficult if Austria is allowed to be alone heard in this difficult case, and if, in view of establishing her complete hegemony in the Servian districts, she acts as the rearguard of the Servian forces. Russia begins to feel her mistake; her great anger against Prince Alexander is evaporating, and the Slavophile party is beginning to stir itself in favor of the Bulgarians. Even the Emperor, though he has avoided naming the Prince, has passed a great eulogy on his army, and on the Russian officers who organized it. We must expect, therefore, if the war breaks out again, that Russia and Austria will perforce take opposite sides; but fresh hostilities will, we hope, be avoided by the action of European diplomacy. There must now be some corrections made in the stipulations of the Treaty of Berlin; there will probably be some sort of personal union of North and South Bulgaria. Prince Alexander can no longer be dethroned, and he will in all likelihood be allowed to rule over the two provinces, but with a different status and character in each.

Correspondence.

"CRIMINAL IMMORALITY IN HIGH PLACES."

To the Editor of The Nation:

Sir: Your note in the *Nation* of November 26, commenting upon a resolution in relation to Mr. Stead and the *Pall Mall Gazette* disclosures, moved by myself at a late meeting of the New York Committee for the Prevention of State-Regulated Vice, had escaped my notice till this late date, when my attention was called to it by a friend. You ask, referring to Mrs. Gibbons, the President of the Committee, and myself, to be informed "where these astounding disclosures of criminal immorality in high places are to be found, and whether they have themselves ever seen them or have any good reason for believing in their existence, and if so, what." For details as to the disclosures I respectfully refer you to the *Pall Mall Gazette* statements, concerning which you were quite fully advised by your own London correspondent. As to the credibility of those statements, and whether we have any good reason for believing them, I reply that we presume the testimony concerning their substantial truthfulness given by the Archbishop of Canterbury, the Bishop of London, Cardinal Manning, Samuel Morley, and Mr. Reid, M.P., to whom they were specially referred, and by whom they were most carefully considered, to be worthy of our credence. These distinguished gentlemen reported that, "After carefully sifting the evidence of witnesses and materials before us, without guaranteeing the accuracy of every particular, we are satisfied that on the whole the statements of the *Pall Mall Gazette* are substantially true." Their examination of the subject was comprehensive, dispassionate, impartial Has the *Nation* been afforded better facilities than theirs for sifting the evidence of all the witnesses and details in the premises? If so, when and where? In the absence of opportunities superior to those of the distinguished gentlemen whose testimony we accept, your imputation of untruthfulness on the part of Mrs. Gibbons and myself would seem, to say the least, ungracious.

Aaron M. Powell.

New York, December 21.

[Mr. Powell avoids the point. The tribunal of archbishops and others who sat on the Stead stories did not say they found evidence of "criminal immorality in high places." They said nothing about "high places." In finding evidence of "criminal immorality," they only found what everybody knew. Moreover, we now know, and Mr. Powell ought to know, that their examination of the subject was not "comprehensive, dispassionate, impartial"—was not, in fact, worth anything; because they did not discover that Stead had himself concocted the only case of which he printed the details—namely, the "Lily" or Armstrong case, and had lied in assuring the public that he had personal knowledge of the

facts. We did not impute "untruthfulness" to Mrs. Gibbons or Mr. Powell, but only loose talk, of which a good many others have been guilty on the same subject.—Ed. Nation.]

WHISKEY AND THE COLOR LINE.

To the Editor of The Nation:

Sir: While I am convinced that there is much less "bulldozing" in the South than many good people of the North believe, I hardly think your reference to "lively bidding for negro votes" in the recent Atlanta election affords a sufficient premise for your conclusion "that the color-line in politics is vanishing throughout the South."

The circumstances surrounding a Southern—at least a Kentucky—election are favorable to "bulldozing." The voters stand outside the building in which the poll-books are kept, and give the names of their candidates through an open window. In many places the "floaters" (including many of the "pore white trash" as well as negroes) hold the balance of power, if not absolute control. It often happens that these floaters postpone voting until late in the day for two reasons: (1) whiskey is donated more freely to those whose votes can be influenced by it; and (2) the price of votes rises later in the day. Sometimes it will appear, near the time for closing the polls, that there is not time for all to vote. One side gets possession of the polls while it "votes its men." This is a slow process—in Kentucky at least—for each voter gives the name of his candidate for each office and it has to be recorded; and if the ticket is a long one, and the voters are very drunk, the outside generally becomes impatient. That a struggle should sometimes occur for possession of the polls would seem simple enough to predict, and that the side containing the larger proportion of negroes should usually find itself *not* in possession of the polls, can but follow from the present state of Southern society. I have known cases of more premeditated bulldozing, but not many.

Bulldozing is not generally necessary. So far as my experience goes, a majority of colored voters expect to be paid for their votes. Almost all will sell to the Republican party for half the money that will secure their vote for the Democratic. If no money is paid, they stay at home, or visit the polls, get what free whiskey they can, and often go home without voting. Many white men do the same. In one county in this State, with very few colored voters, politicians on both sides have told me that more than half the white voters expect pay for their votes.

The color line in politics will not vanish till the color line vanishes in some measure from religion, education, and society; and I believe I can adduce satisfactory evidence that this has not been accomplished, even in Atlanta. Nor do I believe the fact that white and colored voters of both sides walked to the polls arm in arm means much. I have seen it in every closely contested election for several years.

I believe "the census figures of adult male negroes" in the Southern States with which I am acquainted represent the number, or a part of "the number, of Republican votes which would be polled" if all voted and the elections were not influenced by bribery or fear. I can at this time only call to mind two negroes who "habitually vote the Democratic ticket." But money and whiskey are mightier than the shotgun. Kentucky.

A NATIONAL UNIVERSITY.

To the Editor of The Nation:

Sir: I should like to add a thought or two to what has been said by your recent correspondents upon the subject of a national university. The establishment of such an institution has not only been ably advocated for a score of years or more, but had been proposed before the close of the last century. The institution now known as the Ohio University, at Athens, but which has never been anything more than a college, was the outgrowth of this idea. Dr. Cutler, who had much to do in forming a plan for it, proposed that it be called the American University. When Ohio became a State, its Legislature, to which body the management of the University lands had been intrusted, far from doing anything to promote the interests of the prospective institution, almost systematically continued to diminish its revenues. It is only a few years since the current flows in the opposite direction. The management of the agricultural land scrip has shown quite recently that our State universities have not yet got entirely out of the danger of like treatment.

The unfortunate fact stands that we have but few students who are willing to pursue advanced studies for their own sake. It is true, a hundred or more young Americans go abroad every year to study; but these would probably go anyhow, no matter how good the facilities at home, because of the additional advantages afforded for acquiring foreign languages. Besides, what are these among the many who attend our colleges and so-called universities? The fact that "mercantilism" is absorbing the best talent of the nation has of late been frequently dwelt upon in public addresses and in published articles. Yet—if there be any consolation therein—if we may accept the testimony of those most conversant with the facts, our English cousins are no better in this respect. Sir Lyon Playfair, in his recent address, asserts that our general Government is doing more for science than Parliament. We all remember the bitterly sarcastic remark of Huxley, while quoting the opinion of a friend, that "In England it is better for a man's worldly prospects to be a drunkard than to be smitten with the divine dipsomania of the original investigator." The Englishman is little given to pursuits that are so largely ideal—less than the Frenchman, much less than the German. The large German element among us has not benefited us in this regard, because those who came hither were almost exclusively of the middle and lower classes, who hoped to better their worldly condition by coming. The average Yankee and the average German-American are exactly on a par in point of mercenariness.

I suppose the Ohio idea in education is about the American idea on this question: it is to let the public fix the standard by which a college or university shall gauge its work. (Isn't Harvard doing something of this kind?) The President of one of our most populous colleges habitually proclaims the doctrine that a university to be successful (which, being interpreted, means numerously attended) must have a constituency, and in order that the constituency be large, its standard of scholarship must not be too high. We have, in Ohio, institutions calling themselves universities that have an annual enrolment of nearly 2,000 students, and that openly proclaim their ability to take an unsophisticated youth and graduate him with an A. B., or with almost any other degree he may desire, after two years' instruction. The hold these institutions have on the public is melancholy testimony to our wretched notions about the higher education. That some of our best colleges are so meagrely attended is largely owing to the pernicious influences that emanate from these quack establishments. That ten students, or even two students, who are willing to devote themselves unselfishly to scientific pursuits, are quite as deserving of pecuniary aid as one hundred or one thousand engaged in bread-and-butter studies, is an idea which there is as little hope of getting into the heads of a majority of our legislators, either State or national, as there is of constructing a flying machine that shall carry passengers across the Atlantic. Both feats will probably be accomplished about the same time.

Between the numerical estimate of the success of our higher institutions of learning on the one hand, and the ecclesiastical notion on the other, the pursuit of truth for its own sake—that is, the original investigator as we find him at the German universities—has but a sorry time of it. Nor is the day of deliverance near at hand, or even in sight. Those who labor to bring about a better state of public opinion on this question will have something more than their labor for their pains; they will have the consolation of the missionary, who feels that though appreciated by few he is laboring in a cause that must ultimately triumph. But let no man now living lay the flattering unction to his soul that the triumph will come in his day. I believe that we must expect from individual generosity not only the endowment of original research, but also the establishment and maintenance of educational institutions of the highest grade. S.

Ohio, December 12, 1885.

SCIENCE AND BREAD AND BUTTER.

To the Editor of The Nation:

Sir: In the *Nation* for December 10 Mr. Werner A. Stille, writing with reference to a university at home, introduces the very prevalent idea, which, by its frequent quotation, seems to be regarded as a fact admitting of no question, that the scientific spirit in Germany is the result of a high ambition on the part of the Germans without any bread-and-butter element. I am sorry to throw doubt upon this ideal state of affairs, but one cannot remain in a German university and mix with German students for more than a very short time without being convinced that the motive for investigation is largely "Butterbrod," together with the almost universal requirement of a dissertation before examination. For what is the condition of affairs there?

Practically the only way to the public service, professional and professorial life, is through the university. The teachers in the high-schools (Gymnasien and Realschulen), polytechnic schools, and universities are chosen almost entirely on the evidence given by original work, and when a German applies himself to original work it is often with the avowed object of making his way in his profession. He must investigate if he would succeed. In chemistry especially can this be shown. The remarkable and wonderful development of organic chemistry during the last few years is in large part due more to the bread-and-butter consideration than perhaps to any other. There was a time when a professor of chemistry chose between pure science with comparative poverty and applied science with wealth, and chose the former, but in our day the professor of organic chemistry can follow pure science, patent the results of his investigations, and gain both glory and lucre.

That it is not lack of ambition which prevents good work being done at home is shown not only by the fact that in those universities here where a dissertation (not a mere nominal one) is required good work is done—work certainly equal to that done abroad—but also by the fact that many who study abroad and thoroughly imbibe the spirit of research, on coming home soon give up all work, either because they are placed in circumstances where original work will not, or apparently does not, tell, or where so much time is required that none is left for investigation, or where it is actually though tacitly discouraged.

Appointors to professorships are so frequently

influenced more by local or personal considerations than by record of work done or promise of work in the future, that no encouragement is given to any kind of ambition except perhaps that of being a good canvasser.

That the offering of prizes by a National Scientific Association would modify and cure this condition of affairs is exceedingly doubtful, unless it was felt at the same time that the work thus done would be of benefit in advancing the candidate toward "bread and butter." The prizes must be permanent ones. What is needed to develop a university is a money value to original work. It must help a man's fortunes here as it does in Germany. That it does so there is shown by instances where German "Privat-docenten" and extraordinary professors have gained renown and position by "bahnbrechend" work, which was almost relinquished when the ordinary professorship was reached. Let original work tell, and it will spring forth here as elsewhere.

It is not in any way denied that there is such a thing as a scientific spirit. The names of Boyle, Cavendish, Rumford, Franklin, Audubon, Humboldt, Faraday, Draper, Clerk-Maxwell in the past, and Marsh, Cooke, Rutherford, Agassiz, Joule, Rayleigh in the present, show that bread and butter is not the only motive. But that it enters, and enters largely, into the inducements to investigation which possess Germany, is not to be questioned.—Yours respectfully, B.

CHARLESTON, S. C., December 14, 1885.

JEWS IN AMERICAN SOCIETY.

TO THE EDITOR OF THE NATION:

SIR: Your article in this week's issue on the "Keiley Correspondence" is capital, just to the point, as your articles always are. Does not this prejudice against the Jews exist in this country as well? Are Jews ever received in good society outside of their own? Do Americans ever associate with Jews outside of business? Do American ladies call on Jewish ladies and receive them at their houses? If they do I am not aware of it; on the contrary, I know that they do not, and would turn up their noses if they should meet them on terms of social equality; the Constitution and fundamental laws of this country notwithstanding. Mr. Bayard probably never heard of Judge Hilton's refusal to receive Mr. Seligman and family at the Grand Union Hotel at Saratoga some years ago, or of Mr. Corbin's order not to admit Jews at certain places on Coney Island.

I do not mean to question the right or wrong of this prejudice; much can be said for and against it. I only say that it exists here as well as in Europe, and I should like to remind those people who have so much to say about the Germans and other nations on account of their prejudice against the Jews, to sweep before their own doors. High-sounding phrases like those that Mr. Bayard employed look very well on paper and adorn our statute-books, but they cannot deceive any one who is acquainted with the customs and internal affairs of this country. M.

NEW YORK, December 17, 1885.

"PENNSYLVANIA DUTCH."

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "D. G.," in the *Nation* of December 10, refers to the Germans of Pennsylvania in terms which may perhaps require some qualification. It can hardly be expected that a high-spirited people, such as many of the "Pennsylvania Dutch" undoubtedly are, should accept without protest such assertions as the following:

"They are thrifty, peaceable citizens, but they never rise higher. Large numbers of them still speak a dialect compounded of bad German and worse English. Many of them can scarcely understand any other language. They have religious beliefs and ceremonies so strange that those who have not seen them often doubt their existence. They are far inferior to the Quakers; have less natural ability, less education, less refinement. High progress among them is an impossibility."

We have heard such criticisms too frequently to be greatly displeased by them; but for all that they are, and always have been, manifestly unjust. As early as the middle of the last century letters were written to England by prominent Philadelphians describing the Germans as "so profoundly ignorant as to be unable to speak the English language," and as "fast becoming like unto wood-born savages." At the very time when these letters were written, almost every German church in the province sustained a flourishing parochial school, and the celebrated printer, Christopher Saur (or Sower), was conducting, at Germantown, a German publishing house which was by far the largest and most successful in the American colonies.

Ever since my father boxed my ears in boyhood for saying "Pennsylvania Dutch," I have not liked the term. It is certainly a misnomer. The name Dutch properly belongs to the Hollanders, and it is, therefore, misleading to apply it to the Germans of Pennsylvania. It is now so frequently employed that we have become used to it; but when folks want to be polite they say "Pennsylvania Germans."

Concerning the dialect of Pennsylvania, much nonsense has been written. It is, however, as Professor Haldeman calls it, "a dialect of South German with an infusion of English." This English infusion is naturally much greater in some localities than in others. It is not essential, and when it is omitted the dialect closely resembles those which are spoken along the Rhine at the present day. I have frequenly used it in addressing country people in Germany, and invariably found that I was better understood than when I spoke pure German.

The German clergy of Pennsylvania, as a rule, speak fairly good German in the pulpit and in private conversation. Some of them are natives of Germany or Switzerland, and preach precisely as they would have done if they had remained in the Fatherland. Of course, among the minor sects, which have no educated ministry, the language of the pulpit is more nearly colloquial. German newspapers are numerous, but vary greatly in style. Some of them employ excellent language, while others seek to amuse their patrons by introducing localisms and peculiar forms of expression. Since the schools have become English, the language of the people is rapidly changing, and it must be confessed that it is often imperfect and broken. In this respect improvement may be confidently expected; and in the meantime we console ourselves with the reflection that the English spoken by rustic communities in other sections of the country is not always immaculate.

Your correspondent's references to "strange beliefs and ceremonies" I am at a loss to understand. Three-fourths of the Germans of Pennsylvania, it is safe to assert, are either Lutherans, Reformed (generally called "German Reformed"), Moravians, or Methodists. There are also several Roman Catholic congregations. In the beliefs and ceremonies of these denominations there is certainly nothing which can be considered strange. They number among their ministers eminent theologians whose writings, whether composed in English or German, are not unknown to persons who take an interest in theological literature. They have literary institutions whose published course of study indicates that they hold a respectable position among American colleges, and many of their recent graduates are now pursuing advanced studies in European universities.

The only denominations to which the remarks of your correspondent can in any degree apply are the so-called "peace sects," which are especially numerous in Lancaster County. This term includes the Mennonites and "Dunkers," or German Baptists, with several minor "asteroidal fragments." They resemble the Quakers in wearing a peculiar dress and in testifying against the evils of war and a "stipendiary clergy." In doctrine they are generally Baptist. The "Dunkers" on certain occasions practise feet washing as a religious act. This is certainly a "strange ceremony," but it is with them a very solemn service, for which they claim Scriptural warrant in the example of Christ. In their own way they are an active and energetic body, and in the Western States are making progress in purely English communities. An offshoot from this sect was the "Order of the Solitary," at Ephrata, which was so prominent in our early literary history; but it has long since ceased to exist.

Small religious denominations in rural communities are apt to become fossilized; and the "peace sects" have in some respects proved no exception to the rule. For many years they were generally opposed to higher education, but in this respect there have been great changes, and they now have several excellent schools. If in some respects unprogressive, the fact is probably mainly due to their great average wealth. The magnificent farms, in which they take great pride, require attention and labor, and they lack incentives to "high progress." It is, however, certain that they have a sufficient knowledge of finance for their own immediate purposes. To them especially the language ascribed to a recent Governor of Illinois may be supposed to apply: "A Pennsylvania Dutchman in trade can give a Yankee several 'points' and yet beat him on his own ground." Such as they are, it is, however, unfair to represent the "peace sects" as typical of the whole body of Pennsylvania Germans.

Most of the early German settlers were poor exiles, driven from the Palatinate by successive French invasions, or by the cruelty of their own rulers. When they arrived in Pennsylvania they found that earlier settlers had chosen land which was easily cleared, and they were compelled to attack the forests which occupied the interior of the country. The result proved that the soil which had sustained great trees was best suited to agricultural purposes; but who can form an adequate idea of the toil and privation which the task of clearing it involved? For years they dwelt in comparative solitude, constantly exposed to the attacks of hostile savages. Separated in great degree from the educational influences of the fatherland, and unable to speak the language of their rulers, it is perhaps not surprising that their intellectual progress during the colonial period was slow, though there were among them, at all times, men of intelligence and influence. Concerning the important part which they subsequently took in the War of the Revolution, Bancroft has written: "Neither they nor their descendants have laid claim to all the praise that was their due." Of the Governors of Pennsylvania since the Revolution eight have been "Pennsylvania Germans" and several others were German on the mother's side. On the social influence of the Germans in Pennsylvania it is not necessary to enlarge. Such names as Muhlenberg, Wister, Helffenstein, Hiester, Keim, and many others have, we believe, been mentioned beyond the limits of the State. In science, too, the names of Melsheimer, Gross, Leidy, and Haldeman are sufficiently familiar.

The Quakers and the Germans have always been good friends, though they have had little personal communication. Except in Philadelphia and its vicinity, the Quakers have ceased to be an

important element in our population. Their gentle manners must, however, win them friends wherever they are known, and we cheerfully accord to them all the refinement which has been claimed in their behalf. In natural ability, on the other hand, the Pensylvania Germans are not inferior to any other people. Indeed, I have been assured by eminent educators that they manifest a peculiar aptitude for classical and philosophical studies.

English is the language of our country, and all other languages must give way before it. In Pennsylvania the day will surely come when German shall be cultivated only as an accomplishment, and spoken by the intelligent alone. Such changes, however, require more than a single generation. In the meantime, it may be well to remember the advice of Dr. Benjamin Rush, in his 'Essay on the Germans,' written a century ago: "Do not contend with their prejudices in favor of their language. It will be the channel through which the knowledge and discoveries of the wisest nations in Europe may be conveyed into our country." J. H. DUBBS.

THE INDIAN PROBLEM.

TO THE EDITOR OF THE NATION:

SIR: All will agree with Commissioner Atkins in the opinion that "It should be industriously and gravely impressed upon them (the Indians) that they must abandon their tribal relations and take lands in severalty," etc. The Commissioner, however, singularly underrates the power of Indian prejudice in entertaining the hope that all the Indians can be won over in five years to the support of such measures. The five (so called) Civilized Nations are supposed to be much more susceptible than others to new ideas, and yet the prejudice among them against such a movement is exceedingly bitter. It is doubtless true that many of the mixed bloods are at heart in favor of such a course; but they dare not openly advocate it, as such action would immediately deprive them of all political influence, and even subject them to great risk of property and life.

Any attempt to change the *status quo* in five years, or in five times five years, will certainly be bitterly opposed by the full-bloods with almost absolute unanimity. The great trouble lies in the fact that they are utterly devoid of any ambition for personal independence and advancement. If one happens to rise a little above the common level and begins to advocate something better, it is not infrequently at the cost of his life. We have put it in the power of the Indians to live without work, and the bread of idleness is anything else but a civilizing diet. The lesson of laziness which our policy has inculcated will not readily be unlearned, and he who hopes to see the problem disposed of in a few years is destined to disappointment.

Mr. Atkins's plan for selling the surplus lands and putting the money on interest for the different tribes has a serious objection: it will act as a perpetual premium on the laziness and lack of ambition which we have mentioned. Congress should respond at once to the President's recommendation for a Commission to investigate the problem. The occasional visits of Congressional committees are a perfect farce, so far as securing any valuable information as a basis for legislation is concerned. Only a day or two is spent at each agency, and the value of that is generally counteracted by the fact that the Indians are warned beforehand to "put their best foot forward." It is safe to say that all the information gathered by the average "junketing committee" could be obtained from other sources at one-hundredth part of the cost.

Let us have an Indian Commission with ample funds to make a thorough investigation of the problem, so that Congress may no longer be forced to legislate in complete ignorance. W.

INDIAN TERRITORY, December 14, 1885.

'LES MISÉRABLES' IN ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: I should like through your columns to warn the readers of the *Nation* against a so-called translation of Victor Hugo's 'Les Misérables,' in three volumes, published by Ward, Lock & Co., of London and New York. In order to show how incomplete and untrustworthy this translation is, it is only necessary to state that the publishers have abridged the five volumes of the original French edition to three volumes of about the same size in the English translation — in other words, have left out entirely some 700 or 800 pages, or about two-fifths of the work as published in French. It would be tedious to attempt to call attention to even a small part of the omissions, but there is one alone which to me would render the book absolutely worthless, viz.: the entire elimination of the sixteen or seventeen chapters containing Hugo's magnificent description of the battle of Waterloo.

Another piece of "fine work" which distinguishes this remarkable production is the publishing in uniform style of 'By the King's Command,' another novel of Hugo's, which has no more to do with 'Les Misérables' than Dumas's 'Count of Monte Cristo,' and placing this work in the same box with 'Les Misérables,' and listing it on the title-pages of the three volumes of the latter work in such a manner as to give the purchaser the impression that 'By the King's Command' is either a part of 'Les Misérables' or a sequel to it. Permit me to inquire whether there is a trustworthy and *complete* translation of 'Les Misérables' to be found in this country?

Respectfully, W. G.

CHICAGO, December 14, 1885.

WOMEN ART STUDENTS IN MUNICH.

TO THE EDITOR OF THE NATION:

SIR: Can I have through your columns answers to the following questions concerning women art students at Munich? First, how and where two American women could live in that city on very small means? If there are portrait and life classes exclusively for women, who are the teachers of such classes, and the cost of instruction? If it would be possible for an American woman in Munich to support herself by teaching the English language, and how she could find such employment? M.

NEW YORK CITY, December 14, 1885.

Notes.

MR. W. P. TISDEL, "U. S. Diplomatic Agent to the Free State of the Congo," is now preparing his notes of travel in that section of Africa, and the book, profusely illustrated with pictures taken from photographs, will be of considerable interest. Mr. Tisdel travelled on and along the Congo and its tributaries nearly six months, penetrating into the interior as far as Stanley Pool, and visiting several entirely unknown parts of that country. He passed the great cataracts of the Congo, so graphically described by Stanley, hunted elephants and hippopotami, and had to fight his way through the country. So far only two works on the Congo have appeared—one written by Stanley himself; the other by Mr. Johnston, an English newspaper correspondent and disciple of Stanley. Mr. Tisdel's book will be the first by an independent observer who does not share Stanley's enthusiasm, and will make some startling revelations about the true state of affairs on the Congo. A German edition of the work is being prepared by Mr. Ernst von Hesse-Wartegg.

M. de Brazza has very recently returned to France, and is about to write an account of his ten years' work as an explorer in the valley of the Congo. The chief results of the expedition sent out by the French Government in 1883 under his lead are summed up as follows by the *Temps:* A territory equal in extent to France has been acquired on the right bank of the Congo, a large part of which is high and well-watered tableland. Twenty-five stations have been founded; over twenty-five hundred miles of river courses have been surveyed, and a regular communication between the interior and the coast, by means of the Niadi and Ogowe Rivers, has been established. The cost of this expedition to the Government has been 2,145,000 francs.

An American edition of Mr. George Saintsbury's new 'Specimens of English Prose Style' will be issued at once by Jansen, McClurg & Co., Chicago.

'Evolution and Religion,' a lecture by the Rev. M. J. Savage, will be published in pamphlet form by Geo. H. Buchanan & Co., Philadelphia.

'Sermons Preached in the First Church, Boston,' by the late Rufus Ellis, D. D., is in the press of Cupples, Upham & Co.

The forthcoming report of the New York Shakspere Society on the supposed original autograph of Shakspere now in possession of C. F. Gunther, of Chicago, will be accompanied by full detail photographs of the folio, of the autograph, and of the various memoranda, signatures, and inscriptions on the folio and its bindings. The report will be printed in the regular series of the Society's publications.

Having, in his 'Old Times,' brought us to the close of the last century, Mr. John Ashton, like some panoramic showman, draws the curtain on 'The Dawn of the Nineteenth Century in England' (Putnams). The periodical extent of the dawn is the first decade, whose leading politico-economic events Mr. Ashton summarizes as is his wont, and then proceeds (when the first of his two volumes is nearly exhausted) to exhibit life on the streets, on the river Thames (for it is London he has in view more than England), and in society. He tells of modes of conveyance, of oil and gas lighting, of police, of cock-fighting and gambling, of hunting, of costume, of concerts, of theatres and attendant rioting, of painting, of the press, of medicine, of army and navy, of smuggling, of executions, etc., etc. All these topics he illustrates in the usual way—textually by extracts from the newspapers of the time, and pictorially by his own tracings from contemporary caricatures and broadsides. Any one who has read his former works knows just what this is: like the March Hare and the Hatter at table in 'Alice's Adventures,' Mr. Ashton has "moved up" one plate for his new feast. He is not a master in this kind of historical purveying, but he has the field pretty much to himself, and his pages contain a great deal of amusement and information.

We have already said our say about Mr. Pater's 'Marius the Epicurean,' and it is enough to note here a second edition in a single volume and less expensive, but still handsomely made, by Macmillan & Co.

'A Winter Holiday,' by William F. Hutchinson (printed by the Providence *Press* Co.), tells a good many interesting things about a trip to St. Augustine, Cuba, Nassau, and one or two other of the Bahamas. The style is uneven, and sometimes degenerates to something lower than the colloquial; and the book has too much the air of an advertisement.

The new Harvard University catalogue ex-

hibits two innovations, one the fresh design for the college seal on the title-page; the other the map at the end, on which are set down the college buildings and even the residences of the professors, together with a considerable portion of the city of Cambridge. This is a much-needed improvement. The catalogue can be had in New York of F. W. Christern, 37 West Twenty-third Street.

No number of *Le Français* has been a better example of the peculiar excellence of this periodical, and yet once more and finally the editor is obliged to suspend publication. His experience has certainly shown that for such a help to the study and enjoyment of French there is not, as he says, a *vrai besoin*, or, as our American idiom is, a paying demand. On every account this is much to be regretted, but M. Lévy has the rare satisfaction of having left nothing undone to merit success; and if he has at last shared the fate of his predecessors, in point of achievement he greatly surpassed them all.

In *Mélusine* for November 20 M. H. Gaidoz leads off with a paper on folk-lore in the United States, paying particular attention to Mr. W. W. Newell's excellent work on the 'Games and Songs of American Children' (Harpers, 1883), which he praises in very high terms, and ranks among the best European writings on the subject. He pays it the further compliment of an appendix, supplementing its bibliography.

Book-Lore enters on its second volume with the December number. The American agent is Mr. David G. Francis, 17 Astor Place, New York.

The National Exposition at Buda-Pesth has naturally its Fine Arts section, of which the illustrated catalogue, in three languages, has just come to hand (New York: F. W. Christern). We are assured in the introduction that this collection of paintings and statuary fairly represents the artistic impulse of the past decade in Hungary. If so, it is certainly of good omen, for, judged by these process cuts, there is very little extravagance in the artistic tendency, while the national spirit is so prevalent that there is a remarkable freshness in this catalogue as compared, say, with that of the Salon. We see it in the landscapes, the domestic pictures, the portraits, and the historical compositions, which are not too numerous. One remarks among the portraits a fine one of Tisza.

The Commission appointed to prepare a 'History of the Jews of Germany' has determined to publish, as preliminary to this work, complete chronological lists of all documents, chronicles, inscriptions, acts, and laws relating to the Jews of the Frankish and German Empires down to the accession of Rudolph of Hapsburg, in 1273. A journal will also be issued containing minor miscellaneous historical material. The plan of the Commission includes in addition the publication of translations of all works in the Hebrew language, both manuscript and printed, relating to the Jews, and as introductory to this a bibliography of all such works will be published.

'Reise der russischen Gesandtschaft in Afghanistan und Buchara in den Jahren 1878–1879' (2 vols.; Jena, 1885) is the title of the German translation of a highly interesting Russian book of travels and personal adventure by Dr. Yavorski (in German transliteration, "Jaworskij"). The author was the medical attendant of General Stolietoff in the embassy to Emir Shir Ali, started during the interval between the conclusion of the treaty of San Stefano and that of the treaty of Berlin, when Russia, exasperated by Beaconsfield's threatened intervention in Turkey, was anxious to create for herself a diversion by an alliance with Afghanistan against the British in India. The Emir was won over, which led to England's declaration of war against Afghanistan, whereupon Stolietoff hastily left Kabul, accompanied only by Dr. Yavorski, and returned to Tashkent, in Russian Turkistan. The physician was sent back to join the rest of the embassy, and met it at Massari Sherif, in Afghan Turkistan, whither it had retired with Shir Ali in his flight before the British advance. He remained at the side of the fugitive Prince till the latter's death, in February, 1879, and then, surrounded by turbulent soldiery, sought refuge across the Oxus, in the dominions of the Emir of Bokhara, at whose court he remained for a time, until circumstances allowed him to return to Tashkent. The narrative is uncommonly rich in particulars gained from close observation and study concerning the physical, ethnographical, and political conditions of the countries visited, to which the translator, Dr. Eduard Petri, has added an introduction and valuable explanatory notes.

More pressing publications have forced us to neglect several valuable serial issues, whose progress we note from time to time. From B. Westermann & Co. we have received Parts 4–7 of Prof. G. Droysen's 'Allgemeiner Historischer Handatlas,' with its fine open maps—this double-page one of Germany in the time of the Reformation, for example, being about 14x18 in., and most minutely colored. Part 5 contains numerous plans of the Continental battlefields of 1864–71 on a large scale, and in one view the ground fought over by France and Germany in 1870–71. In Part 7 Elsass-Lothringen from 1648 to 1780 is shown in one large and three small maps. A copious text accompanies each of the parts, of which three more will complete the work, embracing ninety-six maps, at a cost of twenty marks.

Of the 'Allgemeine Völkerkunde' (Westermann), Parts 2-10 are before us, all devoted to ethnography, and all to Africa. The text is by Prof. Dr. Friedrich Ratzel, and of correspondingly high authority are the illustrations. These are very numerous, and mostly from photographs, and possess extraordinary interest as faithful delineations of savage and barbarous tribes in groups and in individual portraiture, our old friend Ketchwyo (to spell his name phonetically) being shown in this gallery. We must also remark the frequent colored plates of weapons, tools, ornaments, etc., as well as of native Africans; they are admirably executed.

Of higher grade typographically (but not pictorially, though the cuts are fine) is the popular 'Allgemeine Weltgeschichte' of Flathe, Hertzberg, and their associates (Westermann). The new parts of this are 23-28, and include Hertzberg's 'History of the Ancient Romans,' without finishing it. The illustrations are plentiful in the text and on separate leaves.

Meyer's 'Konversations-Lexikon,' in the fourth edition, has completed its second volume and begun the third with Parts 1, 2, ending with Bogorodizk. The leading general articles are on building and statuary, beer, Berlin, Burmah, population, and flowers; the fullest biographical on Beaconsfield, Beethoven, and Bismarck. The illustrations to statuary are very delicate and exemplify a host of masterpieces. There is an illuminated facsimile of a page of Gutenberg's forty-line Latin Bible of 1455, and four pages of autographs, all European. Among the maps, we can cite two of Berlin and its environs, and also Baden, Belgium, and Bohemia. It marks the rapid changes in Oriental politics that when the article on Burma was closed, France seemed to be the Power about to bring that country into relations with Europe.

The new 'Brockhaus's Conversations-Lexikon' (L. W. Schmidt) also shows in its new parts 172 to 177 what it can do in colored illustration, with a fine plate of polychromatic ornaments, and another of the principal orders. Austria-Hungary and its "annexes" carry off the honors in the map series. From the ethnographic map of the Austrian Empire, which includes the larger part of the Balkan States, it appears that not only are there no Serbs in the territory claimed by King Milan as compensation for the aggrandizement of Bulgaria, but that the Bulgars are the main inhabitants of the country now belonging to Servia to the northwest of Pirot as far as the junction of the Nishawa and Bulgarian-Morawa Rivers. If a line should be drawn from this point to the northern boundary of the Widdin District, a large proportion of the inhabitants of the Servian territory south of it would be found to be Bulgars, the Serbs occupying only a part of the central portion. Excellent are the customary folded plates of birds, stones, plants, etc. The articles Austria, Ottoman Empire, and East Indies make a timely appearance. Paris is treated at length, and the work pauses at George Peabody. The lesser Brockhaus (L. W. Schmidt) has attained its thirtieth part and first volume, ending with Heusler.

A correspondent informs us that two years ago at Newnham College, Cambridge, England, the girl students conducted a society analogous to the Johns Hopkins House of Commons, with a Liberal and a Conservative side, and discussions on leading Parliamentary topics. Still another calls attention to an article by the late Blanchard Jerrold in the *Nineteenth Century* for June, 1883, on "The Manufacture of Opinion," which states that at that date more than a hundred "Houses of Commons" were in existence in England, some of them having more than a thousand members, and one of them (in Liverpool) being twenty-five years old. What is particularly noteworthy here is that they are not organizations of students, nor confined to young men. They are, in fact, a good deal like our debating societies, lyceums, etc.

—The January *Atlantic* makes no effort to astonish the New Year with the signs of its prosperity. The first chapters of a fresh serial by Miss Murfree, and another opening of the "New Portfolio," which it is evident age is never to have a chance of withering, naturally mark the beginning of a volume, but without ostentation. The noticeable thing in the number, in a literary way, is the editor's breaking of a long silence in fiction by a story, "Two Bites at a Cherry," plotted with characteristic surprise, and as felicitous in its art as in its title. Full as it is of the incessant interplay of thought, image, and wit, which is the author's charm in prose, it carries us safely over even the pitiless comedy of its *finale*. A truly notable article, too, is that on "The Free Negroes of North Carolina," instructive both as to the condition of the blacks in *ante-bellum* days, and as to the curious social phases of the Southern poor at present, over which light is gradually stealing. The race here discussed is the original or manumitted Negro, in distinction to that of the Freedmen, which settled in the border counties and along the then worthless coast. It will be news to some to find, what is true, that the free negroes enjoyed the right of suffrage until 1835; and the peculiar conditions in North Carolina which made their lot more tolerable than elsewhere, as well as the non-enforcement of the violent laws of the reactionary and terrorized period, are so treated as to throw a good deal of light on history. It seems that an irreconcilable feud exists between the two groups of blacks—the "Old Issue" and the "New Issue," as they call each other—and that the old race is destined to decay and extinction, in the writer's view, partly because of their hybridity—the three-fold strain of white, black, and Indian—and partly because of "the innate indolence and shiftlessness" of a race never compelled to habits of industry, and insensible to the stimu-

lus which their newly acquired freedom gave to the freedmen.

—*Harper's* is distinguished by the first appearance of Mr. Howells as the occupant of the "Study," in whose atmosphere at the first rising of the curtain there is more geniality than light. An interesting literary contribution is that of Mr. Conway's, in which he lays the wandering newspaper ghost of that "pall-bearer of William Shakspere" who was buried in Virginia. The stone seems to have been found, and the erased inscription recovered from a soldier's diary. The date, 1618, makes it our oldest known epitaph. But there is nothing said of the funeral at Stratford. General McClellan's paper on the militia is the most important in the number, in public interest. That it advocates a new army and militia is a matter of course, and General McClellan gives his advice in detail as to its formation, composition, training, and disposition in the different parts of the country. The reasons with which he supports the general demand are not uncommon ones, and are certainly to be admitted as valid for a reform of some sort in our system of defence and armed national police, though perhaps so complete a system as he argues for may be a matter of army logic rather than civil necessity. One reason only we note as unusual, and it is to be observed that it is given in connection with a prophecy of a speedy restoration of our mercantile navy. Then, says General McClellan, "we will begin to ask ourselves by what right a foreign nation holds a cordon of fortified naval stations commanding so many avenues of approach to our shores, and enabling it to cut off our vessels in the event of war." He refers to Halifax, the Bermudas, Nassau, and Jamaica; and clinches his comment by declaring that had we possessed the Bermudas and Nassau the civil war would have been shortened "by some two years."

—The prediction of cold waves by the Signal Service is one of the most practical and successful of their efforts. The smaller needs of the individual householder who shakes down and covers over his own furnace, as well as the larger interests of the dealers who ship cattle by the carload from the West, and the requirements of the unattractive occupation that is thought to be characteristic of Cincinnati, are all served by the timely announcement of the change from thawing to freezing weather. A recent Signal Service note on 'Cold Waves and Their Progress,' by Lieutenant Woodruff, is therefore of more than usual popular interest. It is based on an examination of the cold waves occurring from January to June in the years 1881–84, when eighty-eight sudden abnormal falls of more than 15° were recorded. The waves appear in the far Northwest; 15 per cent. of them came from the Pacific, but the larger remaining portion were first detected in Montana or Dakota. It is therefore concluded that their origin is north of our stations, in British America. They always follow an area of low barometer, and are accompanied by high pressure; and if the movements of these latter could be definitely predetermined, the prediction of the progress of the cold waves would be made more accurate than it now is. According to their direction of advance, three classes of waves are distinguished: the first move eastward over the great lakes and across New England, not extending south of the Ohio; the second spread southeastward and cover the whole country east of the Rockies in their progress, and this class occurs as frequently as the other two together; the third move southward from Montana and Dakota to Texas, then eastward over the Gulf States, and finally to the Atlantic slope: these sometimes are felt at St. Louis and Shreveport before they reach St. Paul and Chicago. Thirty-three examples out of sixty-six reached Bismarck as soon as Helena; Washington has to wait thirty-two to fifty-six hours later for their appearance. The cold wave that spread over the country on March 18 and 19, 1883, is described in some detail as a well-marked and typical illustration of the phenomena in question: from New England to Texas there extended a broad belt of country within which the temperature fell 20° to 40°, and even 47°, in twenty-four hours. A comprehensive table, giving the numerical elements of the eighty-eight waves, closes the note.

—Not long ago Capt. Willard Glazier succeeded in gaining considerable newspaper notoriety by reason of his alleged discovery of a new source for the Mississippi River, in the form of a lake higher up on the stream than Lake Itasca. To this lake he modestly attached his own name, while the members of his family, his sisters and his cousins and his aunts, were all remembered in the distribution of names upon the minor lakes and streams in the field of his explorations, and he is now attempting in earnest to have his preposterous claims as a geographical discoverer recognized and his names adopted by the map-makers. As is well known, the country about the head of the Mississippi is not by any means a *terra incognita*. In 1832 Schoolcraft explored the river to Lake Itasca, which he discovered. In 1836 Nicollet extended the work, including in his area of exploration the region drained by the affluents of this lake. He describes no fewer than five small lakes or ponds which are drained into Lake Itasca, and unquestionably one of these is "Lake Glazier." In later years settlements, roads, and railroads have approached the region, lumbermen have thoroughly explored it, and finally, in 1876, it was sectionized by the General Land Office. Lines were run at intervals of a mile, both in the direction of a parallel and of a meridian, and every lake and pond half a mile in length was surveyed by traverse. A survey of this kind leaves little room for geographical discoveries. Five years after this survey was made Captain Glazier made his alleged discovery. From his map and narrative it is easy to see that his "Lake Glazier" is identical with Elk Lake, of the Land Office plat, which is situated in township 143 north, range 36 west. This lake, or rather pond, has an area of about half a square mile, and is about 200 yards distant from the extremity of the southwest arm of Lake Itasca.

—The Japanese seem determined to be in line with the other civilized nations of the world, and their seriousness and perseverance contrast sharply with that trivial view of them which is popularly held in Christendom. Americans are even surprised when told that the subjects of the Mikado do not enjoy the burlesque and caricature of him as seen on the theatre boards, and accepted as the mirror of fact and history. One of the most recent indications of progress in Dai Nippon is the formation of the Roma-ji Kai (Roman Alphabet Association) in Tōkiō. The object of this band of scholars, which is composed of both natives and foreigners, is to discard the old cumbrous modes of writing and printing, borrowed from China, and to substitute the Roman letters. Most of the Japanese members are students who have studied in Europe or the United States, and are familiar with one or more of the modern languages of the West. They propose to use twenty-two of the twenty-six Roman letters, omitting l, q, v, and x. After much labor, the committee of forty members, adopting the standard pronunciation of the capital Tōkiō, agreed upon a simple system, and the Society is now prepared to print, in accordance with it, both books and vernacular newspapers. They accept the consonants at their usual English values, and the vowels at those of Italian (German or Latin), and thus write Japanese words, discarding the usual *kana* spelling. Heretofore the Chinese ideographs have been employed in writing on serious subjects, and the Japanese syllabary of forty-eight sounds for phonetic transliteration, for trivial correspondence, story-books, novels, and such literature as uneducated women and children make use of. It has been demonstrated that, by mastery and use of the system of the Roma-ji Kai, a Japanese lad may learn to read as well in one year as of old he was able to read in ten years. Some go so far as to make the advantage fifty times greater—a week in Roma-ji being equal to a year in Shina-ji. Of course, easy practical use of books printed in Romanized Japanese presupposes a knowledge of the spoken tongue. Already the members of the Roma-ji Kai have begun to print a newspaper; prominent journals are devoting a column per day to matter printed in Roman letters; and dictionaries, text-books, native literature, and the classic texts are to be thus set forth. It will thus be possible for Europeans to study Japanese without trial to the eyes, and waste of years in deciphering and remembering the so-called idea-writings of the Chinese. As matter of fact, the Chinese characters are no better fitted to express Japanese than to express Latin or English. The Roman letter is thus destined to be in Japan an engine of progress.

—From indications sufficiently abundant, it seems highly probable that the Roma-ji system will prevail in Japan. The missionaries and native Christians already make use of it to an encouraging degree. The entire New Testament and specimens of the growing Christian literature are now published with twenty-two letters. Prof. Martin N. Wyckoff, who has recently prepared for the press in Tōkiō a work in Japanese on English rhetoric and composition, after composing it in the Chinese character and native *kana*, at the last moment transliterated his MS. into Roma-ji, because, as he says, it "is now the fashion." The pioneer and persistent advocate of the system, who must now rejoice in the flattering prospect of long-awaited triumph, is our own American scholar, Dr. J. C. Hepburn, of Kanagawa. Besides his missionary and medical labors since 1859, Doctor Hepburn, who has made the standard Japanese-English dictionary, issued the first edition in 1867, and the fourth is now nearly ready. In this monumental work, from first to last he has made use of substantially the same system as that of the Roma-ji Kai, in whose conferences he has taken part. As early as 1873 he issued the translated New Testament in Romanized Japanese. Much credit for the final results is also to be given to Mr. Basil Hall Chamberlain, the accomplished English translator of the Ko-ji-ki, or Japanese "Bible," and the Rev. C. E. Eby, an American missionary.

ORMSBY'S DON QUIXOTE.—II.

The Ingenious Gentleman Don Quixote of La Mancha. By Miguel de Cervantes Saavedra. A Translation, with Introduction and Notes, by John Ormsby, translator of the 'Poem of the Cid.' Macmillan & Co. 1885. 4 vols., 8vo.

PASSING now to the volumes before us, which have been put forth in the best taste, correct in typography, convenient in form, appetizing in every respect, we are impressed with the conviction that all the conditions required in the interpreter of such a work have been successfully met in this. After a neat map of the district familiar to all as the scene of Quixotic adventure, there follows an explanatory preface, giving an interesting account of the earlier English versions, and some of the principles on which the present one is based, all pervaded by a scholarly, modest tone that in-

vites our respectful attention. The Life of Cervantes is a well-ordered exhibition of the materials Navarrete left behind, in which, however, we miss the new data gathered from that scholar's later papers, and, as already remarked, those furnished by Moran and the Marquis de Molins. The text of the translation is interspersed at convenient intervals with annotations brief but sufficient, to which attention is called by references at the foot of the page. The whole is furnished at the close with a collection of all the proverbs scattered through the work, given in the original Spanish with the literal English version, followed by a bibliography of chivalry fiction and of the editions of 'Don Quixote.' In the compilation of these lists, Gayangos and the Valencia Salvá have been freely used, but Hidalgo, the Birmingham study, and the Ticknor catalogue would have supplied additional matter. However, with the exception of Moran's edition of the romance, which is of the highest importance, the leading reprints have been given with completeness enough, since the aim seems not to have been to present an exhaustive array of editions. Ortego's latest specimen of Quixotomania was of course too recent for insertion, and we believe has not been made known abroad save to the holders of Murillo's Bulletin. Aribau's issue of 1846, that heads the 'Biblioteca de Autores Españoles'—a collection that does more credit to the energy of its publishers than to the diligence and accuracy of its editors, with prominent exceptions—was reset in larger type in 1848, and is one of the best readings to follow, since it generally reproduces the Madrid editions of 1608-15.

As a whole, there can be no just doubt of the superiority of Mr. Ormsby's translation over all that have preceded it. With a careful revision, to which every such effort is subject on its first appearance, the removal of occasional blemishes, faults arising from incorrect readings, and excesses of literalism, we think it is destined to replace all past efforts in this field, all contemporary competitors, and to moderate to a salutary degree any inordinate ambition in future aspirants. He has used Shelton freely, as was legitimate and traditional, and in many passages it would have been wiser to follow his text, the original of which was certainly that of Brussels, 1607, for the First Part at least.

Speaking of text, it will be as well to make a digression. That of 'Don Quixote,' which was always slovenly, doubtless, in the MS., is still unreliable even in the best modern editions. Each editor, now for more than a century, has considered it a duty, and apparently an easy task, to correct the author of his own book, storing it with the gratuitous changes and interpretations of fertile inventors. The writer of the preface to Bohn's edition justly remarks: "An original work of literature, if it deserve to live, ought to be permitted to pass through its mortal course unaltered, preserving the identical form in which it was left by its author." But that was written in England, a country where there is patience and fidelity and care; in Spain, however, where such qualities are considered irksome and slow, where the sun makes indolent students whose motto "*¿ qué más da ?*—God will provide," unwrinkles the conscience and shirks the toil, it is less fatiguing to "put" the reading as the editor understands it, than to compare and investigate to reach the author's idea. So Clemencin says practically countless times in his six volumes of comments: "Cervantes was a poor dog, who forgot what he had written before," and down goes some Quixotic nonsense that is copied for a score of years as pure gold refined. Hartzenbusch was his successor, and he has left four sumptuous tomes, duplicated in 16mo, which were printed at great expense in the traditional prison of Cervantes at Argamasilla de Alba, the village of La Mancha whose name he did "not care to remember." With his literary lance in rest, Hartzenbusch has dashed into windmills, ejected vials of editorial balsam over the Sanchos of the plume, and mistaken droves of innocent sheep for veteran forces against whom no word of warning could restrain him. He was a clever writer, and a genial, obliging old gentleman as head of the National Library, whose acquaintance we cherished and whose memory we revere. But we cannot forget that his fondness for tinkering nearly spoiled Alarcon, Calderon, Lope, and Tirso for the 'Biblioteca de Autores Españoles,' and at last the great Cervantes, treating their texts as school compositions sent to him for correction. Our friend, M. Morel-Fatio, now of the Collège de France, an unwearied student of Spanish archives, writes thus of Hartzenbusch's Calderon: "Il a presque partout corrigé, *sans faire part au lecteur des motifs* qui l'obligeaient à s'écarter de la leçon traditionelle." Unluckily, Mr. Ormsby has generally adopted Hartzenbusch's reading, although in many passages he has been on his guard and adroitly avoided the shoals. In tasks like this, it should not be a question what the author ought to have said or might have said, but only what he did say in the recognized editions of his own time. Of the First Part of the 'Quixote' there are three Madrid editions printed by Juan de la Cuesta, the first of 1605 with the *Privilegio* for Castile only; the second of 1605 with the *Privilegio* for Castile, Aragon, and Portugal, and the third of 1608. Each of these differs notably from the others, especially the third, which is now most esteemed and followed. An independent and carefully revised edition is also that of Brussels, 1607. For the Second Part there is but one Cuesta edition, that of 1615. Since Cervantes died the following year, no other could be corrected by him. All these texts are needful to build up a standard reading, and there will never be one till this collation is accomplished. A copy of some one of the early editions, with marginal and interlinear emendations in the handwriting of Cervantes, has lately been discovered in Spain by a Mr. F. Ortego, of Palencia, who published it there in 1883-4, in two volumes, quarto, one containing the corrections compared with various modern editions, and the other with the revised text alone. As far as we have been able to examine this *trouvaille*, it seems to be an extremely valuable contribution to the subject, and makes many important and apt modifications of the early printed lections. The title and preliminary matter are wanting to Sr. Ortego's original, so that its identity has not been established—a thing, however, easy enough to do by comparing it with all the ancient editions stored in the vast collection of Senator Heredia, the Madrid owner of the late Salvá library.

So excellent a result as that which Mr. Ormsby has given us deserves an extended review to set forth some of its charming naïvetés and happy hits. The defects inherent in it, as in all such undertakings, must, however, here be left largely unmolested for lack of space. We should have liked to speak of the *duelos y quebrantos*, and what Oudin found them to be as recorded in the third edition of his 'Tesoro,' Paris, 1621; to offer an excursus on Spanish swearing to amateurs and antiquaries, because it involves a good knowledge of the 'Vitas Patrum'; to explain that "by Roque" (*ro-key :* i, 138) is a harmless invocation to the best of saints, and therefore not a Castilian one—to good Saint Roch of Montpellier, the patron of pest and torture.* Haldudo himself (*long togs*, alluding to his Moorish kirtle) is a relic of the wars of the Alpujarras (1568), as Mendoza and Marmol tell us, the survivors of which were interned in La Mancha by Philip II., where they may still be recognized, as in Murcia, by the *zaragüelles* (Turkish trowsers) and their manner of sitting cross-legged on the ground. Hence the phrase, "There may be Haldudos knights," simply says: "Even seedy Moors may be gentlemen." "Real by real, and perfumed" suggests a Spanish custom, but fails to interpret it—"every blessed real." "I shall find you [out] though you should lie closer than a lizard"; closer to what? why, *á la tapia*, "to a wall." "For if he spoiled the *leather* of the shoes you paid for, you have damaged that of his body"; the *leather* of his body? We in America say "hide" in both cases, as they do in Spain (*cuero*), which satisfies the word-play.

The portion in the Second Part erased by the Inquisition (iii, 399), but preserved by Shelton, and in modern Spanish editions by Aribau (1846), first appears in the 'Index' of Seville, 1632, appendix; not in that of 1619, which never existed, except as a Geneva reprint of the Madrid folio of 1612-14.

We will close, if allowed one moment more, just for the love we bear the dear old book. "They are, in short, peasants; plain, homely people, without any taint of disreputable blood, and, as the saying is, old rusty Christians, but so rich that by their wealth and free-handed way of life they are coming by degrees to be considered gentlefolk by birth (*hidalgos*), and even by position (*caballeros*)" etc. (ii, p. 64). The adjective "disreputable" is strong; Shelton's "bad" is preferable, since the allusion is to the three sources of taint in one's pedigree, blood of Jew, Moor, or Lutheran heresy, each of which was (and is) *malsonante*, not necessarily "disreputable" in those still faithful, but a drawback, a blemish. "Old *rusty* Christians," an entire misconception of the term *cristiano viejo*. "Old Christians" should have always quotation marks in the text, because used technically. It stands opposed to "New Christians," that is, Jewish and Moorish proselytes who consented to be baptized as an exemption from the persecutions of 1390 and 1492, and applies to their descendants as well. Thus those Spaniards of non-Semitic origin, old denizens of the Peninsula, of pure Iberian, Celtic, Roman, Gothic blood, prided themselves on their untainted pedigree. They were the *gens de vieille race*, the true "Brand of Spain"—"Old Christians." The word "rusty" is here a sad let-down, taken, however, bodily from Shelton, who did not comprehend it. Nor could he from books alone. The original *rancioso* (obsolete for *rancio*) tallies with its etymon *rancidus* in so far as it means "rank," "musty," "pungent"; but here it stops, and turns into another channel, partly traced by the later dictionaries, and partly not. From "musty" it comes to signify "old," "ancient"; then "old-fashioned," "out of date"; next, "through and through," "out and out," "genuine," "uncompromising," meanings these which the lexica do not give, but which the people daily use, and which the good old sore-headed, narrow-minded, exclusive hidalgos of the past wrote in their books: see the 'Carta de Paracuellos,' and the 'Journey of the Coaches from Madrid to Alcalá,' which are full of this sense of *rancio*. When a native wishes to declare emphatically the pride he feels in his intense nationalism, his *Españolismo*, he will as often say: *Soy un Castellano rancio*, as *Soy Castellano por los cuatro costados*, both of which profess him to be an out-and-out, through-and-through Spaniard, from the delectable mountains of Castile, Old or New. Hence the common phrase, *El Filósofo Rancio*, is not "the Rusty Philosopher," but an uncompromising adherent of the old school, sworn foe to imported

* *Ni Rey ni Roque* (vol. iii, p. 12), which is translated "King, Rook (!), or earthly man," is therefore King (highest of men) or Saint (best of men). The Spaniard Clemencin did not understand it, because "Roque" was not a cosa *de España*, but imported (*religionis causa*).

novelties, heresies, liberty, and the Devil. "But so rich"; here the text Mr. Ormsby used (that of Hartzenbusch) is corrupt. The first Cuesta edition of 1605 gave, it is true, *pero tan ricos;* but the second Cuesta of 1605, and the third Cuesta of 1608, corrected into *pero tan rancios*, which Shelton and Oudin adopted, as do all the best modern Spanish texts from that of the Academy, 1780. Don Juan, however, emended "but so rich," making *wealth* the paramount consideration of recognition—a totally *un*-Spanish trait, as any one knows who has lived long in Spain.

The translation of the whole passage would, then, be something in this wise: "In short, they are plain, homespun farmers, without any taint in their pedigree; genuine 'Old Christians,' as the saying is: so genuine, indeed, that now their wealth and liberal way of living are gradually admitting them to rank as nobles, and to even the best society as gentlefolk."

DICEY'S LAW OF THE ENGLISH CONSTITUTION.—I.

Lectures Introductory to the Study of the Law of the Constitution. By A. V. Dicey. Macmillan & Co. 1885.

WHEN one scrutinizes the English Constitution, it is like looking at the nests of birds or at the curious and intricate work of beavers and insects; its strange contrivances seem not so much the ordered and foreseen result of human wisdom as a marvellous outcome of instinct, of a singular political sense and apprehension, feeling its sure way for centuries, amid all sorts of obstacles, through and around and over them, with the busy persistence of a tribe of ants. England, in emerging from the Middle Ages, has brought along its old forms and institutions—king and lords and all the phraseology of feudal subjection—but it has harnessed all these stately mediæval appearances into the service of freedom. Through the extraordinary energy of the English political genius, the old institutions have grown elastic and significant of new thought. "I, the writer," says the author of the Ottimo Comento, "heard Dante say that never a rhyme had led him to say other than he would, but that many a time and oft he had made words say in his rhymes what they were not wont to express for other poets." In like manner the English have forced their familiar institutions to express their highest political conceptions. Never an institution has led them to say other than they would; and, indeed, they have said through these institutions things that other nations have not known how to express. The other day a writer in the *Spectator* proposed as an amendment to a scheme for the reform of the House of Lords that, instead of having, as had been suggested, a hundred working peers, chosen by the Crown from among the Lords at the beginning of each session, the choice should be made by ballot by the Commons. The *Spectator*, in a foot-note to the communication, remarked: "What is the difference? The Crown is only another name for a majority in the House of Commons." That is substantially true; but what a remarkable statement it is! How has this come about?

"The leaders of the English people," says Professor Dicey, "in their contests with royal power never attempted, except in periods of revolutionary violence, to destroy or dissipate the authority of the Crown as head of the State. Their policy, continued through centuries, was to leave the power of the King untouched, but to bind down the action of the Crown to recognized modes of procedure which, if observed, would secure first the supremacy of the law, and ultimately the sovereignty of the nation. The King was acknowledged to be supreme judge, but it was early established that he could act judicially only in and through his courts; the King was recognized as the only legislator, but he could enact no valid law except as King in Parliament; the King held in his hands all the prerogatives of the executive government; but, as was after long struggles determined, he could legally exercise these prerogatives only through ministers who were members of his council, and incurred responsibility for his acts. Thus the personal will of the King was gradually identified with and transformed into the lawful and legally expressed will of the Crown." So that to-day:

"The prerogatives of the Crown have become the privileges of the people, and any one who wants to see how widely these privileges may conceivably be stretched as the House of Commons becomes more and more the direct representative of the true sovereign, should weigh well the words in which Bagehot describes the powers which can still legally be exercised by the Crown without consulting Parliament; and remember that these powers can now be exercised by a Cabinet who are really servants, not of the Crown, but of a representative chamber which, in its turn, obeys the behests of the electors."

We have been quoting from Professor Dicey's 'Law of the Constitution,' a new and first-rate addition to the literature of this subject. There is nothing, so far as we know, which answers so neatly, so briefly, and with such fit and accurate discriminations the sort of questions which one asks himself at the present day about the English Constitution. Historical matter we have had before, and of the best; Professor Dicey does not go much into that. General exposition, after the methods of the essayist and the political philosopher, we have had, and that also very good. But Dicey, in discharging his new duties at Oxford, has aimed at a different thing and has accomplished it with great success. He deals with *the law* of the Constitution and not primarily with its conventions, or merely political and moral arrangements. And in rejoicing over some recent judicial expositions of this law of the Constitution, he pays a cheerful page of tribute in an unexpected quarter which we quote in passing:

"Teachers of law enjoy at this moment the aid of one invaluable though unrecognized coadjutor. Mr. Charles Bradlaugh is doing more for the law outside the House of Commons than he could by any possibility do for it when (if ever) he is admitted to a quiet seat in the House. He has rediscovered the law of maintenance; he has elucidated the law of blasphemy; he has explained the character of a penal action; he has enabled us to define with precision the relation between the House of Commons and the courts of the land; he has gone far to make intelligible the legal character and solemnity of an oath. Should he live and flourish, or perhaps one should rather say, should he live and not flourish, there is no saying what secrets of the Constitution he may not unveil to the public gaze. His failure or success is from this point of view at least equally advantageous to the nation, and will, one may reflect with satisfaction, equally ensure to him his appropriate reward. He will obtain, or rather he has obtained, legal immortality. While *Calvin's Case*, while *Bates's Case*, while the *Case of Ship-money*, while the *Bankers' Case* are held in remembrance, Mr. Bradlaugh will survive in *Bradlaugh v. Gossett* side by side with *Stockdale v. Hansard*."

Let us give some account of the contents of Professor Dicey's book, before proceeding to comment upon certain parts of it which relate to this country. Two great principles, as he puts it, have been worked out all through English history. "The first is the omnipotence or undisputed supremacy throughout the whole country of the central Government," "the sovereignty of Parliament, which means in effect the gradual transfer of power from the Crown to a body which has come more and more to represent the nation." "The second, . . . which is very closely connected with the first, is the rule or supremacy of law." The first of these principles he illustrates in an instructive manner by a consideration of the non-sovereign legislatures of the colonies, and of like bodies on the continent of Europe and here. Of the rule (*i. e.*, the supremacy) of law it is said that it "is as marked a feature of the United States as of England"; and again that it "is a conception which in the United States . . . has received a development beyond that which it has reached in England; but it is an idea not so much unknown to as deliberately rejected by the constitution-makers of France and of other Continental countries which have followed French guidance." It is described thus:

". . . That 'rule of law,' then, which forms a fundamental principle of the Constitution, has three meanings, or may be regarded from three different points of view. It means, in the first place, the absolute supremacy or predominance of regular law as opposed to the influence of arbitrary power, and excludes the existence of arbitrariness, of prerogative, or even of wide discretionary authority on the part of the Government. Englishmen are ruled by the law and by the law alone: a man may with us be punished for a breach of law, but he can be punished for nothing else. It means, again, equality before the law, or the equal subjection of all classes to the ordinary law of the land administered by the ordinary law courts. The 'rule of law' in this sense excludes the idea of any exemption of officials or others from the duty of obedience to the law which governs other citizens, or from the jurisdiction of the ordinary tribunals; there can be with us nothing really corresponding to the 'administrative tribunals' (*tribunaux administratifs*) of France. The notion which lies at the bottom of the 'administrative law' known to foreign countries, that affairs or disputes in which the Government or its servants are concerned are beyond the sphere of the civil courts, and must be dealt with by special and more or less official bodies (*tribunaux administratifs*), is utterly unknown to the law of England, and, indeed, is fundamentally inconsistent with our traditions and customs. The 'rule of law,' lastly, may be used as a formula for expressing the fact that with us the law of the Constitution, the rules which in foreign countries naturally form part of a constitutional code, are not the source, but the consequence of the rights of individuals, as defined and enforced by the courts; that, in short, the principles of private law have with us been, by the action of the courts and Parliament, so extended as to determine the position of the Crown and of its servants. Thus the Constitution is the result of the ordinary law of the land."

Professor Dicey's principal consideration of the rule of law is devoted to showing the application of it—"the manner in which the law of England deals with . . . the right to personal freedom, the right to (so-called) freedom of discussion, the right of public meeting, the use of martial law, the rights and duties of the army, the collection and expenditure of the public revenue, and the responsibility of Ministers." This part of the book is full of interest, but we cannot dwell upon it, further than to remark the curious fact that English law appears to have furnished no definite answer as yet to some pretty obvious questions. It subjects a soldier, or rather it leaves him subject, to the special rigors of military law; he may be shot if he does not obey the order of his officer to fire on a mob. On the other hand, it also subjects him to the ordinary law of the land; if he does fire on the mob when ordered, he may be hanged. "What," asks our author, "is, from a legal point of view, the duty of the soldiers? The matter is one which has never been absolutely decided." But a test is cited from Mr. Justice Stephen, which, as Dicey guardedly remarks, "is, it may fairly be assumed, as nearly correct a reply as the state of the authorities makes it possible to provide"—the test, namely, of whether the soldiers "might fairly suppose their superior officer to have good reasons" for issuing the order.

The last of the eight lectures which make up this volume discusses "the connection between the law of the Constitution and the conventions of the Constitution." The real sanction of these conventions, which are happily described as "the constitutional morality of the day," is found to lie, after all, in the force of law, in "the fact that the breach of these principles and of these conventions will almost immediately bring the offender into conflict with the law of the land."

If Parliament were not assembled in any given year, the Mutiny Act would expire, and with it "all means of controlling the army without a breach of law"; large parts of the revenue, also, would cease to come in. If the Ministry should refuse to resign or to dissolve Parliament after it had lost the confidence of that body, it would soon be imperilled by a refusal to pass the Mutiny Act or the Appropriation Act. "The conventions of the Constitution are not law, but in so far as they really possess binding force they derive their sanction from the fact that whoever breaks them must finally break the law and incur the penalties of a law-breaker." "The general rule that the House of Lords must in matters of legislation ultimately give way to the House of Commons, is one of the best established maxims of modern constitutional ethics. . . . On any matter upon which the electors are firmly resolved, a Premier, who is in effect the representative of the House of Commons, has the means of coercion—namely, by the creation of peers." The doctrine here given appears to be in substance this: that the conventions of the Constitution are heeded because there are legal means, although indirect means, of enforcing them. It is difficult to see that the refractory Lords would ever incur the penalty of being lawbreakers by continuing to be refractory.

So brief a summary as is here made of this very instructive volume must needs do it injustice; but Professor Dicey is already well known as a legal writer of a very high class, and lawyers will easily anticipate the insight, the clear and precise handling of the subject, the lucid statement, the wit, and the quite perfect legal style that mark these lectures. To students who are familiar only with our constitutional law, that which is here called "the law of the Constitution," as indeed the whole English "Constitution itself," will very likely seem but an emasculated sort of thing—since all is, at best, but mere statute or common law, subject to repeal by ordinary legislation. The phrase itself will seem to many an odd one; but it is not unknown in English courts: *e. g.*, in the Admiralty Court a few years ago Sir Robert Phillimore declared a certain treaty made by "the Crown" to be invalid as being "contrary to the laws of the Constitution." But although the conceptions of constitutional law in this book are in some respects radically different from ours, there could hardly be a better introduction to the study of our own law than it offers; its constant reference to our methods and to those of France, Belgium, and Switzerland, bring out the significance and flavor of much in all those systems which would otherwise be only half understood or but feebly grasped.

RECENT NOVELS.

The Luck of the Darrells. By James Payn. Harper's Handy Series.

In Peril and Privation. By James Payn. Harper's Handy Series.

A Strange Voyage. By W. Clark Russell. Harper's Franklin Square Library.

The Courting of Mary Smith. By F. W. Robinson. Harper's Franklin Square Library.

Cut by the County. By M. E. Braddon. Harper's Handy Series.

The Parson o' Dunford. By George Manville Fenn. Cassell & Co.

The Dark House. By George Manville Fenn. Harper's Handy Series.

Struck Down. By Hawley Smart. D. Appleton & Co.

A Prince of Darkness. By the Author of 'The House on the Marsh.' D. Appleton & Co.

The Vagrant Wife. By the Author of 'The House on the Marsh.' D. Appleton & Co.

Mrs. Keith's Crime. By Mrs. Clifford. Harper's Handy Series.

Criss-Cross. By Grace Denio Litchfield. G. P. Putnam's Sons.

For a Woman. By Norah Perry. Boston: Ticknor & Co.

Color Studies. By Thomas A. Janvier. Charles Scribner's Sons.

A Captive of Love, founded upon Bakin's Japanese Romance. By Edward Greey. Boston: Lee & Shepard.

MORE than a quarter of a century ago that bitter lover of Tennyson's Maud cried:

> "But these are the days of advance, the works of the men of mind,
> When who but a fool would have faith in a tradesman's ware or his word?"

In the intervening years so rapid has been the progress toward dishonesty that now scarcely may a fool have faith in the wares offered by those "men of mind" whose mental activity is chiefly in the field of fiction. Though the tradesmen be still smirched, the novelist has taken the disgraceful print more deeply. The trade-mark on cotton cloth fairly assures the purchaser that he will get the worth of his money; the name of the novelist is, in the majority of instances, no guarantee whatever. The manufacturer who, having won the confidence of the public, should imitate the policy of palming off grossly inferior goods, would speedily find it suicidal. He would be financially beggared and in matter of reputation consigned to eternal limbo. That a similar doom does not overtake the novelist guilty of like breach of confidence, is ascribable to the more lavish distribution of those qualities necessary to detect and expose imperfection in cloth, than of those which help to the discovery of a fraud in story-telling and to accurate expression of its form and proportion. The promoting cause of this literary immorality is not precisely obscure. It does not lie in the excuse that the wolf, poverty, must be kept from the door, but in the shame that the insatiable maw of the wolf, luxury, must be stuffed. When luxury has become necessity to literary men, they stand within temptation of mercenariness, and from that the step to venality is not long. When the class has become venal the death-knell of the literature of the period has been struck, and every man of letters who, scrambling for cash, is conscienceless about the quality of his work, hastens the deplorable end.

It is to the credit of American novelists who have fairly earned that degree of popularity which makes trading on a name profitable, that they have, so far, resisted the temptation. Whether because, in a country too young to have produced a group large enough and great enough to mark an epoch in literary history, there is more of virtue born of ambition to help at epoch-building, or whether because of comparative isolation from contaminating company, the work of no American novelist of reputation can with justice be stigmatized as a deliberate attempt to obtain money on false pretences. The French and Germans are open to the accusation, while of the English it would be hard to name one who is above suspicion.

Conspicuous among offenders who may be held under the general indictment, and first of those at present before us, is Mr. James Payn. The materials employed in 'The Luck of the Darrells' are so worn, so thin, that to attribute to him unconsciousness of their antiquity is to imply complete oblivion of his own former work, and total ignorance of the work of a host of contemporaries. It is unnecessary to particularize the selfish man of the world whose acts are all the more censurable for the honor of his intentions; the sterling friend and mentor; the beautiful young girl whose lofty principles inspire her to senseless, extravagant sacrifice; the half-dozen of rakes, true men, and detestable dowagers who bloom perennial in the London society novel. They all bear a superficial resemblance to the people whom they represent, but there is not a hint of the substratum of unlikeness in each which it is the novelist's business to discover—which the honest, capable novelist does discover, and does take the time and trouble to express. He proves his honesty and his capability by adding to the seen reality that infinitely more interesting reality unseen, or, at most, but vaguely suspected, by the common run of humanity. In construction Mr. Payn is more mechanical and careless than in characterization. The use of a family tradition to heighten dramatic effect is unobjectionable, but to drag it into the narrative at measured intervals, to thrust upon it the responsibility for a series of casualties, is wanton abuse of the willing horse.

Close upon 'The Luck of the Darrells' comes 'In Peril and Privation,' by the same author. It is a volume of stories of marine disaster, avowedly retold, and addressed to boys. Mr. Payn seems to have assumed that literary ornament would be quite thrown away upon boys; so any boy with an appetite for horror may gratify it without stint among these naked facts of shipwrecks of the last century. The interpolations, instructive and didactic—recognitions of the boy's educational needs and natural depravity—are not so frequent or impressive as to disturb his rapture in the ghastliness of the events.

Mr. Clark Russell's dishonesty takes the shape of repetition of himself exclusively. He has told the best sea stories of his generation, and told them better than any predecessor. To him the process of forcing invention is especially fatal. 'Jack's Courtship' showed signs of collapse. 'A Strange Voyage' is collapse itself. The outline of the incidents is perfectly familiar to readers of his earlier books, and is so broken by elaborate extensions of his former swift, picturesque descriptions, that new readers will wonder where his charm ever lay, and how he made his fame. His calling the voyage "strange" seems to be the last desperate effort of a man with a conscience to impose upon himself.

Mr. F. W. Robinson's defect is an absolute failure to fulfil the promise of his beginnings. The failure does not impress one as due to incapacity, but to indolence. The first half of 'The Courting of Mary Smith' is excellent, leading up to a puzzling complication, to unravel which satisfactorily requires care and thoughtful judgment. Mr. Robinson cuts the knot apparently without reflection; he lapses into a series of showy and common situations which disappoint expectation in the plot and interest in the development of unusual characters.

Miss Braddon is such a notorious culprit that we mention her only to give our accusation the support of numbers. 'Cut by the County' is short; therefore, though it commands all the reverence due to age, commiseration for the infirmities of age is, by virtue of necessity, limited.

Mr. G. M. Fenn is not old in sin, but he takes to it without any of the diffidence of a novice. In his 'Parson o' Dunford' he has given himself fine opportunities of a kind which patient study might have turned to better account. The Lancashire workingmen, agitating for redress of wrongs real and imaginary, are an expression of brute force and uncurbed passions rather than of calm intelligence; and Mr. Fenn, seeing this clearly, might have opened the eyes of sentimental sympathizers to their folly. In the haste to turn off a book, he has not only failed to develop his motive forcibly and perspicuously, but also very nearly succeeded in losing it in the labyrinth of as weak and unnatural a romance as ever

was born in the diseased imagination of a silly school-girl. His 'Dark House' is still more unworthy, and not redeemed even by the suggestion of a motive. Of all the murder and mystery stories of the day it is easily the worst, having neither interest, probability, nor the technical merit of nice joining. It perhaps serves, in our mind, to relieve Hawley Smart of an ignominious distinction, for, until the 'Dark House' came before us, 'Struck Down' had appeared the poorest production possible to the most exhausted purveyor of fiction. But, though comparison mitigates its wretchedness, it does not alter the fact that Captain Smart's central situation, with difference in actors and surroundings, is identical with that of the excellent little story entitled 'The Crime of Christmas Day.'

Miss Florence Warden cannot justly be arraigned for dishonesty, since there is a vast distinction between the trust placed in a reputation fairly won, and the expectation based on the ephemeral notoriety gained by work intrinsically worthless. From her earliest romances it was evident that a demon and an angel struggled for possession of her imagination, the one brandishing the "villanous centre-bit," the other dispensing all the virtues, including lady-like accomplishments, at starvation prices—the burglar and the governess. In 'A Prince of Darkness' the burglar holds the field. Time, however, has so intensified his joy in evil, and increased his power of perpetration, that scientific burglary is now his merest pastime; cold-blooded murder is his preferred evening diversion, while his serious effort is reserved for the most atrocious and occult branches of crime. In 'The Vagrant Wife' the governess steps gallantly to the front. Time has not sullied her innocence or dimmed her loveliness, but it has performed the inexplicable trick of combining with these virgin charms the indefinable attraction of the woman of the world. The scene of this rare creature's exploits is in one of the aristocratic British households invented and patented by Miss Warden. In time of peace it resembles Donnybrook Fair, in war, a Sioux wigwam with unfriendly warriors come unbidden to dinner. Only the popularity achieved by Miss Warden's books excuses a reference to the preposterous nonsense contained in them.

'Mrs. Keith's Crime,' though published anonymously, is now the acknowledged work of Mrs. Clifford. It is a very morbid tale, hysterical from the first chapter, and working up to a succession of shrieks. The sympathy which the tragic incidents excite is converted into incredulous disgust by the exaggerated manner of narration. Women have suffered all that Mrs. Keith suffered, and have been driven by fast-following disaster to parallel acts of madness; but when the woman herself tells of her suffering, and delights to elaborate its minutest detail, human nature cannot repel the suspicion that the pictorial effectiveness of it all has ever been more present to her than the heart-agony or horror. The deepest pain is truthfully called "unspeakable." It is perhaps because this tale of anguish is told in the first person, that the impression left is of a disagreeable book, a false book—one that might easily do a weak woman much harm, and from which no good is possible.

Miss Litchfield's 'Criss-Cross' and Miss Perry's 'For a Woman' are of similar quality, displaying inconsequence of thought and limited range of observation. Both authors linger about a figure of American social life that has had its day among people of any pretension to respectability, or, at all events, of any qualified claim to the pretension. Both authors mean that their people should be allowed the claim. This figure is the American girl on the loose, at home or abroad. As in 'A Knight of the Black Forest,' Miss Litchfield is dealing with the historic character abroad, where her unfortunate traits and propensities were doubly obnoxious. Miss Litchfield has at times a marked delicacy and happiness of expression, which are wasted in the elaboration of so unpleasant and trivial a subject as the pronounced flirtations of Miss Fredoie Bogart and her kind. Though Miss Perry's heroine is of her own impulse not prone to indiscretion, she is forced into an equivocal position by the easy-going social notions of her sister. She is, indeed, thrust into the intimate companionship of a man without "references," and permitted to fall in love with him before her relations discover that he is a dreadful detrimental. The climax of the story inevitably recalls 'Zerviah Hope,' by Miss Phelps, one of the strongest short stories published in years.

After such a surfeit of unpardonable inferiority and mediocrity, it is refreshing to be able to say a word of hearty, thankful praise about 'Color Studies,' a volume containing four short stories by Mr. Janvier. Novelists and critics are continually bewailing the dearth of materials suitable for romance in America, most conspicuously in the city of New York. Mr. Janvier convinces us that the needful matter is all about us, and that only the eye to see, the heart to feel, and the tongue to express have been lacking. His simple, kindly stories are fragments of the romance of Greenwich Village, of Fourth Street and crooked Tenth Street, and of all the region lying about Jefferson Market. His characters are chiefly toiling disciples of art, and in their delineation the ideal and the real are very skilfully blended. Though the fortunes of one set run through the four sketches, each episode is in itself complete, and each, with the exception of "Robertson's Medium," is a distinct gain to that department of literature in which American authors have already proved their supremacy.

Mr. Edward Greey, who has long experience of Japanese ways of thinking, and considerable acquaintance with the language, has done a good work in putting into English the substance of Bakin's story of 'U-den' (Thunder Priest). Bakin, who flourished in our own century, was a scholar as well as romancer, and his score of works are classics. To translate literally one of his voluminous romances, right from the heap, would discourage the American reader. Mr. Greey has wisely given us the lean and not the fat. The water and the adipose being left behind, we have in the 'Captive of Love' the real body, and probably all that is worthy of reproduction. Mr. Greey, having profited by the criticisms upon his former literary achievements, has left out the Japanese lingo, which, when fondly multiplied in italics, is exasperating to the reader, besides suggesting pedantry instead of good taste, and superficiality rather than scholarship. The twenty-six illustrations from the original work will, we fear, please old residents of Nippon more than new readers. Further, the quality of the work betokens that the translator has studied the theatres more than the people themselves. This said, our strictures end. The story is readable and thoroughly characteristic of old Japan. Bakin's idioms, peculiarities, and nuggets of thought are faithfully retained.

The perusal of this story, in addition to its enjoyable flavor, is worth, as a means of culture, a dozen such literary manufactures as Judith Gautier's 'The Usurper.' Bakin's title, 'The Moon in the Cloud-Rifted Night-Sky,' is exchanged for one which describes the chief villain of the story, a Buddhist priest, who falls in love with a singing girl, and breaks all the commandments in his determination to marry her. The usual stock elements of a Japanese romance, which, with due literary orthodoxy, is laid in the potter's field of chronology—the Ashikaga period (1336-1573 A. D.)—are elaborated. Buddhist theology and superstition, murder and blood revenge, children trained from orphan infancy to live for the one end of killing their enemy, *hara-kiri*, magic and charms, falconry and feudalistic pageantry, with touching pictures of humble life and natural scenery, are well set forth in their English dress. With the aid of scholarly native antiquarians, Mr. Greey has produced a thoroughly good specimen of a Japanese romance, so that we have here a truthful picture of the actual Japan of antetreaty days. One may be thankful that the delicate work of reduction in size has been so skilfully, even lovingly done. To enable one to enjoy the real merits of Bakin—so far as a foreigner ignorant of the language can enjoy him—without having to worry through hundreds of pages describing a vendetta or a bowel-spilling—is a task deserving of grateful recognition.

RECENT POETRY.

THERE is a type of poetic volumes, well known to reviewers, and so marked that it recurs every month or two with unfailing certainty. The volumes are so alike that if they were changed at nurse, so to speak, and each were printed under the name of a different author, the writers themselves would scarcely know the difference. They are often smooth and almost always blameless, but it is impossible to criticise them individually since they have no individuality. If the author is a woman, there are poems on Abraham Lincoln, on Decoration Day, and on the marriage of a young friend; on "parting," "retrospection," and "our boy." Books of this class are 'Ashes for Flame, and Other Poems' by Caroline Dana Howe (Portland, Me.: Loring); 'Stray Thoughts and Poems,' by Mary Hildreth Parker (Boston: Cupples, Upham & Co.), this being liberally illustrated with plates that add little to its value; 'Hidden Sweetness,' by Mary Bradley (Boston: Roberts), with many illustrations of flowers and birds by Dorothy Holroyd—these last being of more value than the text; and the 'Poetical Works' of Mrs. H. J. Lewis (Boston: Cupples, Upham & Co.), with a portrait of the author. Similar volumes are 'Poems,' by Jamin Willsbro (Philadelphia: Lacy), and 'America, and Other Poems,' by Henry Hamilton (Putnams), the latter being mainly religious and patriotic. Of essentially the same quality of mediocrity, and not improved by Scriptural subjects and a ponderously didactic tone, is the thick volume entitled 'Elijah the Reformer,' a ballad epic and other sacred and religious poems, by George Lansing Taylor, D.D.; (second edition, Funk & Wagnalls). 'Our Father in Heaven; the Lord's Prayer in a Series of Sonnets,' by William C. Richards (Boston: Lee & Shepard), similarly illustrates the hold that devout themes still have upon the community, making even the poorest verse acceptable to the habitual reader of what is called "the religious press."

Mr. Henry Abbey's 'Poems,' which now appear in a new and enlarged edition (Kingston, N. Y.: Abbey), are of a higher grade than the foregoing in respect of culture and variety, but not as regards individuality; they take no strong hold. In 'Camp Fire, Memorial Day, and Other Poems,' by Kate Brownlee Sherwood (Chicago: Jansen, McClurg & Co.), there are some strong lines. In 'Afternoon Songs' (Scribner), Mrs. Julia C. R. Dorr shows increasing maturity of thought and talent, while her themes sometimes suggest unfavorable comparison with authors of more unquestioned genius. Thus the verses entitled "The Fallow Field" (p. 36) bear marked resemblance to a poem under the same title by the late Mrs. Helen Jackson; the measure is the same, as are some of the thoughts, while the poem as a whole is inferior. In the following

striking verses Mrs. Dorr is, perhaps, at her best:

"THE GUEST.

"O thou Guest so long delayed,
Surely, when the house was made,
In its chambers wide and free,
There was set a place for thee.
Surely in some room was spread
For thy sake a snowy bed,
Decked with linen white and fine,
Meet, O Guest, for use of thine.

"Yet thou hast not kept the tryst
Other guests our lips have kissed,
Other guests have tarried long,
Wooed by sunshine and by song,
For the year was bright with May,
All the birds kept holiday,
All the skies were clear and blue,
When this house of ours was new.

"Youth came in with us to dwell,
Crowned with rose and asphodel,
Lingered long, and even yet
Cannot quite his haunts forget.
Love hath sat beside our board,
Brought us treasures from his hoard,
Brimmed our cups with fragrant wine,
Vintage of the hills divine.

"Down our garden path he strayed,
Young Romance, in light arrayed;
Joy hath flung her garlands wide,
Faith sung low at eventide;
Care hath flitted in and out,
Sorrow strewn her weeds about;
Hope held up her torch on high
When clouds darkened all the sky.

"Pain, with pallid lips and thin,
Oft hath slept our house within;
Life hath called us, loud and long,
With a voice as trumpet strong.
Sometimes we have thought, O Guest,
Thou wert coming with the rest,
Watched to see thy shadows fall
On the inner chamber wall.

"For we know that, soon or late,
Thou wilt enter at the gate,
Cross the threshold, pass the door,
Glide at will from floor to floor.
When thou comest, by this sign
We shall know thee, Guest divine:
Though alone thy coming be,
Some one must go forth with thee!"

If Mrs. Dorr's verses rise above the average level, there are other writers who fall unequivocally below it. Such is Mr. Masson Pell Helmbold, who, by his own dates, can be but twenty-one, and who publishes 'Thisbe's Lament, and Other Poems' (Philadelphia: Lippincott). One would not wish to speak unkindly of anything so youthful; but it is difficult not to regret the premature appearance in public of one who writes of "cute-eyed sin" (p. 22), and addresses a nightingale:

"O primal moral of all morals here!
O bird that singest all alone in arboreal shade" (p. 18),

or sings—

"So haste you now and find a lassie
And take her home and love her,
And though she's virtuous, sweet, yet sassy (*sic*),
She'll raise you far above her" (p. 76).

Again, in 'Verses,' by Francis Allen Hillard (Putnams), the author ventures out of the stronghold of mediocrity to write such trash as this:

"DIANA'S FEET.

"When toying zephyrs coax the hem
Of fair Diana's dress,
And hide-and-seek play in the folds
With fond and soft caress;

"The arched glory of her feet
Breaks from the sheeny cloud;
Then soft as thought is hid again
Within its snowy shroud" (p. 128).

Here we pause, with more discretion than the author has exhibited.

'Utopian Dreams and Lotus Leaves,' by George W. Warder (London: Sampson Low & Co.), has at least this definite characteristic, that it is surcharged with echoes of Joaquin Miller, and, like that writer's first volumes, is printed in London. It contains the author's portrait and autograph; he seems a resident of some one of our Western States, and has the inclination for high-flown names that we have often deplored in the poets of that region. The chief personages of his longest poem are Ethel Vane and Truman Gray, and later we have Earl Darring, Pauline Golden, Beaumont, and Moiselle. In real life the author deals in names a shade less romantic, but he gives an acrostic (p. 213) for "Cora Baker, Lovely Blonde," and closes a poem:

"Far beyond time's rolling tide,
As an angel pure and pretty,
Blooms with life immortal, Ettie,
Now a rose on Eden's hillside" (p. 203).

'A Voyage to the Fortunate Isles,' by Mrs. Sarah M. B. Piatt, appears in a new combination and with the sub-title "Select Poems" (Boston: Houghton, Mifflin & Co.). It contains many of those tender, imaginative, exclamatory, and utterly desolate domestic lyrics with which all this lady's readers are familiar. Had it been called 'A Voyage to the Unfortunate Isles,' it would have explained itself. Alone among poets, Mrs. Piatt has succeeded in linking the thought of childhood almost wholly with moods of sorrow. There may be parents so miserable as to find a sense of relief in the companionship she gives them; but it is painful to think of the multitudes of young mothers upon whom she must have impressed the conviction that they have no business ever to smile again. One of the most powerful of Turgeneff's 'Pictures in Prose' is that in which a wayfarer, turn where he will, sees always a grave opening before him. It is the task to which Mrs. Piatt has successfully addressed herself to paint this same symbol on the walls of every nursery. If poems must be written on the deaths of little children, it is better to strew their biers with flowers, as is done by Maurice Francis Egan in a thin volume of 'Songs and Sonnets,' which, small as it is, yields half its space to "Carmina," by Condé Benoist Pallen (London: Kegan Paul):

"OF FLOWERS.

"There were no roses till the first child died,
No violets, no balmy-breathed heartsease,
No heliotrope, nor buds so dear to bees—
The honey-hearted woodbine—no gold-eyed
And white-lashed daisy flower, nor, stretching wide,
Clover and cowslip-cups, like rival seas,
Meeting and parting, as the young spring breeze
Runs giddy races playing seek and hide:
For all flowers died when Eve left Paradise,
And all the world was flowerless awhile,
Until a little child was laid in earth;
Then from its grave grew violets for its eyes,
And from its lips rose-petals for its smile,
And so all flowers from that child's death took birth."
(p. 8.)

It may be added that there is a good deal of wealth and delicacy in this little volume, and that it contains a sonnet inscribed to Richard Watson Gilder. Mr. Gilder's own volume, 'Lyrics, and Other Poems' (Scribners), is, however, much superior to any that are likely to be dedicated to him, and he stands clearly the first in promise among the younger men to whom we must look to inherit the poetic laurels of Emerson and Longfellow. This was apparent from the first appearance of his 'New Day,' a volume whose very weaknesses were not unwholesome, any more than is the seeming weakness of a wood-flower's germ. He is now visibly growing stronger, without losing sensitiveness; and if any one wishes, after a conscientious reading of Will Carleton, to know what a really poetic treatment of a farm subject is, we recommend the following:

"A MIDSUMMER SONG.

"Oh, father's gone to market town—he was up before the day;
And Jamie's after robins, and the man is making hay;
And whistling down the hollow goes the boy that minds the mill;
While mother from the kitchen-door is calling with a will,
'Polly! Polly! The cows are in the corn! Oh, where's Polly?'

"From all the misty morning air there comes a summer sound—
A murmur as of waters from skies, and trees, and ground.
The birds they sing upon the wing; the pigeons bill and coo;
And over hill and hollow rings again the loud halloo:
'Polly! Polly! The cows are in the corn! Oh, where's Polly?'

"Above the trees the honey-bees swarm by with buzz and boom,
And in the field and garden a thousand blossoms bloom.
Within the farmer's meadow a brown-eyed daisy blows,
And down at the edge of the hollow a red and thorny rose.
But Polly! Polly! The cows are in the corn! Oh, where's Polly?

"How strange at such a time of day the mill should stop its clatter!
The farmer's wife is listening now, and wonders what's the matter.
Oh, wild the birds are singing in the wood and on the hill,
While whistling up the hollow goes the boy that minds the mill.
But Polly! Polly! The cows are in the corn! Oh, where's Polly?'"

There is to be observed in the poem just quoted this exquisite felicity in execution, that while the ballad reveals to us the whole secret of little Polly's life, yet she herself does not come before us at all; she is not a presence, but an absence, and wins all our hearts simply because of her non-appearance on the stage.

'Imbroglio, a Drama,' by George Allender (San Francisco: Carson), is a repulsive blank-verse play of domestic life in that city. It is as nauseous as the most unpleasant police report, if taken seriously; while, if we view it as literature, it is full of such passages as this, taken almost at random (the italics being our own):

"I am her serf
So mean that she will neither give nor sell
Me liberty, *sticking her tyranny*
With talk of the divinity of marriage" (p. 20).

In a dramatic way, the book has a "White Form" and a "Black Form" which start up to reason with a villain; and the dialogue takes sometimes such condensed and vigorous forms as this:

"MALONE—Ha!
HENCHMAN—Ha!
MALONE—Devil!
HENCHMAN—Devilette!
MALONE—Henchman!
HENCHMAN—Malone!" (p. 118).

'Lilith, the Legend of the First Woman,' by Ada Langworthy Collier (Boston: Lothrop), is another poem in blank verse with lyrical interludes. The selection of its theme indicates rather more originality than is displayed in the execution; nor can this unpleasing spectre be made attractive by ingenuity. The author's theory that the word *lullaby* comes from two Arabic words meaning *Beware of Lilith* (p. 5) needs confirmation, the more obvious derivation seeming simpler and more pleasing. 'The Queen of the Hid Isle: An Allegory of Life and Art; Love's Perversity; or, Eros and Anteros, a Drama,' by Evelyn Douglas (London: Trübner), is a book ostentatiously whimsical, of which the author says, in her dedicatory poem:

"For I have made myself a clean, new mould
To pour my fancies in, of mad burlesque,
Yet full of death withal as charnel air.

"I first of men have carved in fancies gold
So queer a pagod freaked with arabesque,
Though treading Wagner's ground 'twixt Goethe and Baudelaire."

This does not sound very wholesome; but there is some crude power in the poems. In 'Wishmaker's Town,' by William Young (Henry Holt & Co.), we find equal affectation, but without the power. Still another long poem is 'Montezuma: An Epic on the Origin and Fate of the Aztec Nation,' by Hiram Hoyt Richmond (San Francisco: *Golden Era* Co.). It deals with a theme which has hitherto resisted the utmost efforts to make it poetical; nor has Mr. Richmond the gifts to achieve success where others have failed. 'Annie's Story,' by S. Selous (London: Jones), is another continuous poem, in ballad measure, often sinking into doggerel, and dealing with the tragedies of fashionable wedlock. 'Old Newbury and the Pioneers'—privately printed, but with a preface by the supposed author, Mr. A. G. Riddle, of Washington, D.C.—is a narrative poem based on early Ohio history, and with a good deal of local coloring. 'In the Hospital,' by Grace Denio Litchfield (Putnams), is a poem commemorative of the services of physicians, and is inscribed to the author's father.

There are many volumes of verse published in England which owe nearly their whole value to their containing what Longfellow called "Poems of Places." To read them is like looking at a set of amateur photographs of picturesque spots; the perpetual interest in the themes makes us charitable to all mediocrities of execution. One of these is 'Hesperus, Rhythm and Rhyme,' by E.

M. Edmonds (London: Kegan Paul), which has some good verses about Athens. Another is 'By Solent and Danube, Poems and Ballads,' by W. Wilsley Martin (London: Trübner), also interesting as having a rather exuberant poem on the return of the Prince Regent from India—a fact worth noting because the utmost loyalty of British bards so rarely succeeds in turning a rhyme in behalf of that not very interesting heir apparent. In the days of "Great George our King" it was otherwise.

A higher type of "poems of places" consists of those books in which English scholarship does so much toward naturalizing the intellectual wealth of other lands. One of these is 'The Song Celestial,' by Edwin Arnold (Boston: Roberts), in which he gives us a versified translation of the Bhagavad Gita from the Sanskrit—impressive and interesting, of course, but less so, to our thinking, than the prose versions of the same fine dialogue. Another poem in this department is the 'Master Thaddeus' of the Polish poet Mickiewicz, translated into English verse by Miss Maude A. Biggs (London: Trübner). We once noticed in these columns the same lady's version of 'Konrad Wallenrod,' by the same author, and we find this book the more attractive of the two, being made readable, despite its length, by the vivacity of the narration and the curious picture of old Lithuanian manners; it is like a visit to the Musée de Cluny. But more valuable than either of these is 'Translations of Ancient Arabian Poetry,' by Charles James Lyall (London: Williams & Norgate). This is a book full of wealth indeed, crowded both in text and notes with rich Oriental thoughts and chivalrous manners, and rich withal in delicate human touches such as this:

"Nay, but our children in our midst, what else
But our hearts are they, walking on the ground?
If but the breeze blow harsh on one of them
Mine eye says no to slumber all night long."
(p. 28).

Of illustrated American volumes the 'Boys' Book of Lyrics' (New York: Harpers), by Thomas Dunn English, can hardly be said to add anything to the plain prose narratives of the events it commemorates: give a boy the facts, and his imagination will supply the heroics. The popularity of Will Carleton's poetry is too well assured with his public for it to make the smallest difference to him whether the critics like his 'City Lyrics' (Harper & Brothers) or not; it is like saying that one does not like Spurgeon's preaching. 'The New King Arthur' (Funk & Wagnalls) is by the author of 'The Buntling Ball,' and must, therefore, according to the evident expectation of the publishers, have many readers; but we should be sorry to be among them, except for editorial duty; it belongs to the dreariest class of college poetry. This book is not illustrated, except very tawdrily on the outside; nor is the Rev. J. W. Chadwick's pleasing little collection, 'The Two Voices: Mountains and the Sea' (Troy, N. Y.: Nims). The editor's taste is admirable, and he includes hardly anything that is poor; but the vein of sea-side poetry has been pretty well worked in previous collections, and the matter is not helped, we should say, by undertaking to bring the mountains upon the scene. After all, the "two voices" are essentially distinct, and the attempt at combination really impairs both.

'Poems,' by William Wetmore Story (Boston: Houghton), gives us in two dainty volumes the poetic labors of one who has perhaps worked in too many fields for his own fame. The first volume contains "Parchments and Portraits"; the second, "Monologues and Lyrics." They show scholarship and cultivation, with a strong flavor of Browning, and their merit stops short of genius. 'Dramatic and Later Poems,' by Matthew Arnold (Macmillan), includes but five distinct poems, three of which were contained in the two-volume edition of the same publishers in 1883; the others, "Merope" and "Westminster Abbey," appearing here for the first time. A volume entitled 'Hymns,' by John Henry Newman, D.D. (E. P. Dutton & Co.), should fitly have been called 'Selected Hymns,' most of those written by this author after his conversion to the Roman Catholic faith being avowedly omitted. This seems hardly fair, either to the theologian or the poet; and it is such arbitrary selection as this which furnishes the very strongest argument for an international copyright law. Another little book includes the 'Complete Poems' of Charles Dickens (White, Stokes & Allen), but it is really a doubtful service to his memory to reprint them; not that they contain what is objectionable, but what is mediocre.

The very dingiest book on the table before us is, in its way, one of the most promising; not by reason of genius, but because it smacks of the soil. In 'Poems of the Prairies,' as it is called on the cover, or, as the title-page says, 'Annabel, and Other Poems,' by Ellen P. Allerton (Alden), we have something genuine. The author lives in Kansas, and the whole book has the flavor of her residence. Beyond the name "Annabel" in the title there is nothing exotic, nothing forced. Such themes as "The Way-side Trough" and "The Sod House on the Prairie" have in them more of promise than dozens of odes on the Parthenon; and a poem like "Walls of Corn" has the supreme merit that it could hardly have been produced anywhere else than just where it was written, in the prairie region of the West:

"WALLS OF CORN.

"Smiling and beautiful, heaven's dome
Bends softly over our prairie home.

"But the wide, wide lands that stretched away,
Before my eyes in the days of May,

"The rolling prairie's billowy swell,
Breezy upland and timbered dell,

"Stately mansion and hut forlorn,
All are hidden by walls of corn.

"All wide the world is narrowed down
To walls of corn, now sere and brown.

"What do they hold—these walls of corn,
Whose banners toss on the breeze of morn?

"He who questions may soon be told,
A great State's wealth these walls enfold.

"No sentinels guard these walls of corn,
Never is sounded the warder's horn.

"Yet the pillars are hung with gleaming gold,
Left all unbarred, though thieves are bold.

"Clothes and food for the toiling poor,
Wealth to heap at the rich man's door;

"Meat for the healthy and balm for him
Who moans and tosses in chamber dim;

"Shoes for the barefooted, pearls to twine
On the scented tresses of ladies fine;

"Things of use for the lowly cot,
Where (bless the corn) want cometh not;

"Luxuries rare for the mansion grand,
Gifts of a rich and fertile land;

"All these things and so many more
It would fill a book to name them o'er,

"Are hid and held in these walls of corn
Whose banners toss on the breeze of morn."

A Journal Kept by Richard Doyle in the Year 1840. Illustrated with several hundred Sketches by the Author, and a Portrait. Scribner & Welford.

THE year which cut such a figure in the world's history was also memorable in the life of Dicky Doyle. In 1840 this most amiable and gifted artist was about fifteen years of age, and then first, on the publication of his humorous design, "The Tournament," his talent gained a commercial value and was encouraged to follow its native bent. Every Sunday morning the family had a "show" of the week's artistic product, and Dick exhibited "history" after "history"—that is, a painting of some historic theme in academic fashion. But he was his father's own son in having a predilection for current satire and caricature, and a wonderful facility in the use of his pencil. To his father's happy suggestion that Richard keep a journal we owe this volume, a delight in itself and a most interesting revelation of the development of genius. The reproduction is in facsimile, and the broad, clearly written MS. page is interspersed with pen-drawings, some purely fanciful, but the majority almost photographic memoranda of the domestic circle and of passing events. The father, the brothers and sisters (no mention is made of the mother), the tutor, and intimate friends and visitors, are depicted to the life. Dick himself looks for all the world as if he had just stepped out of 'Auton House.'

It is well-nigh impossible, in brief, to suggest the charm of this naif record, so creditable to the boy's intelligence and heart. His humor is spontaneous and irresistible, as where he says, of a debate with conscience about rising in the morning, "So, after a desperate combat with my inclinations, in which I fought under great disadvantage (*as I was lying down*)"; or where, in a cell in the Tower, he fears lest the door may close on him, "even if it did not do it of its own accord, which perhaps it would not, *being so small and probably timid with strangers*," etc. Then his passion for music, leading him to avoid no opportunity of hearing the military bands play in the Park, or of witnessing reviews, which he depicts with admirable spirit, still further recommends him to readers youthful and adult.

The Journal has, moreover, a serious and impersonal side, as a mirror of the spirit of the time. If we look first at political incidents we meet with the trial of the Chartist Frost for high treason; the Queen's engagement and marriage; Oxford's attempt on her life; Guizot unsuspecting at the races while Palmerston was planning the quadruple alliance; Louis Napoleon's fiasco at Boulogne; in October, war imminent with France; the siege and capture of Acre. The intellectual movement is evidenced by the appearance of popular novels in parts—Ainsworth's 'Tower of London,' with Cruikshank's illustrations; Marryat's 'Poor Jack'; Boz's 'Master Humphrey's Clock,' with designs by Phiz and Cattermole, for which dealers besiege the doors of Chapman & Hall; a new story by the author of 'Valentine Vox.' Macready is acting *Ruthven* in "Mary Stuart" at Drury Lane, and Charles Kemble *Felix* in "The Wonder," by the Queen's command; and Leigh Hunt's "The Legend of Florence" has its first night. Braham and Grisi and Tamburini are the lights of the operatic stage—the manager of the Italian Opera being forced by a riot to engage the last-named. In June Liszt (whom Dick calls "Litz") plays in concert, and as we had Braham's portrait in "Masaniello," so we have a quite sufficient one of the great pianist in his prime. Landseer's "Laying Down the Law" and Maclise's "Macbeth" are the pictorial sensations in May at the Royal Academy. Dick visits Chantrey's studio, of which he gives a view, and meets Count D'Orsay at the lithographer's. He also figures the famous diving-bell at the Polytechnic Institution, and pokes fun at the popular scientific exposition attempted there. The costumes of the day, of course, are faithfully reproduced—the low-necked gowns for girls and women, the belted tunics, and flat, tasselled caps for boys, as imaged for us in the Rollo books—and all the uniforms of the soldiery. On p. 45, that curious survival by which the English railway ticket-office is called booking-office is explained at a glance. Just as the coach-body was mounted on trucks, and made the original railway carriage, and has never been dismounted, so our conservative cousins across the water for a certain time preserved the stage-coach listing of passengers, as Doyle shows, for his ticket agent sits at a desk with a great book before him. This practice

was too primitive to last, as travel increased, but the name has remained.

We have said more than we meant to, but the book merits it, and Doyle's memory ought to be kept green by it, and gratitude for the innocent amusement we owe him mingled with love for the man.

A Mortal Antipathy. First Opening of the New Portfolio. By Oliver Wendell Holmes. Boston: Houghton, Mifflin & Co. 1885.

A PORTFOLIO is presumably, if not a "thing of shreds and patches," one of odds and ends. The value of these, like table talk, depends on the brain from which they come, and may be very great; but orderly sequence and unity are not to be required in such a case. Variety is the leading trait of the loosely joined chapters to which Doctor Holmes has given the outward semblance of a novel; and so great is this variety that it would puzzle a professional cataloguer to classify the work, to say nothing of the helpless critic. Is it a novel? There is a love story, to be sure, but no "courtin'," no "furnace sighs," no intrigue, no dapper conversation, nothing of the ordinary plot and management which would place this book under that most hospitable designation of our multifarious literature. Is it a study in medicine? There is a large amount of medical anecdote and terminology, and a "case," and considerable speculation on antipathies and nerve centres in general; but the profession is hardly likely to take Maurice Kirkwood's experience seriously. Is it a sketch of New England country life? There are the well-worn village characters with Yankee traits, but they serve only as a background, and surely it would perplex others than makers of gazetteers to find Arrowhead in any spot of America, known or conceivable. Is it a social satire? One does not expect to find a satirist in the genial humorist, and yet the strokes that the female "come-outers" receive are neither few nor agreeable in these records of the new education and the Pansophian Society, with its athletic and strong-minded protagonists, the "Wonder" and the "Terror," as they are dubbed, who fill the principal parts. Then, besides these elements in the narrative, we have many author's confidences by the way, in which Doctor Holmes is most delightful both in substance and tact—reminiscences of old friends, thoughts on memoir-writing, a tribute to the old Holmes house at Cambridge which serves as a sort of funeral oration over the remains, and a poem, naturally written for a college occasion. The versatility of mind, the diversity of intellectual and social interests involved, are most noticeable; and it results from them that there is a profusion of the side-remarks, happy turns, incisive, shrewd hits, and those reflections, half way between worldly philosophy and mother-wit, which are the distinguishing excellences of the author. The lack of high organization in this last volume, if we may venture on an illustration from the physiological field which it naturally suggests, allows greater separateness and freedom of life to the component nerve centres; and to a mind so full, and reminiscent, and discursive as the author's, this is an advantage in literary structure. He finds it to his taste, and seems to have adopted it finally, if we are to judge by his own characterization of his materials. "The Records of the Pansophian Society," he says at the end, "contain a considerable number of essays, poems, stories, and hints capable of being expanded into presentable dimensions." If the promise implied in these words is kept, we may look for more of this writing, which has the freedom, and often the *verve*, of the conversation which the Autocrat has ruled over so long and with such universal acceptance.

An Outline History of Sculpture for Beginners and Students; with complete Indexes and numerous Illustrations. By Clara Erskine Clement. White, Stokes & Allen. 1885. Pp. x, 302.

THE reviewer is weary of finding fault with this succession of little books intended to supply the popular demand for books about the fine arts which do not cost much nor mean much, of which it is easy to read thirty pages taken at random here and there, and which can then be stood upon the shelf. If they were expected to give any knowledge of the essential characteristics of different schools of sculpture, the whole tone and style would have to be different—more critical; words would have to be used with care as to their meaning; a great deal of labor would be involved in such an undertaking; and the books would appeal to a different class of readers. So if a mere list of sculptors and the names of their chief works, with dates, were to be furnished, such a book would be invaluable for reference and would sell, but would not be chosen for a gift-book. And, finally, a "Primer" of sculpture is yet to be written, although we have primers (and very good ones) of everything else—of geography, and electricity, and old Greek life, and English literature; and such a primer might even be as big a book as this, and be all the better for it. But the book before us is one of the anomalous sort hinted at above. Thorwaldsen seems to be the author's favorite, and a dozen pages (one twenty-fifth of the whole) are given to him, while Mino da Fiesole has his name in small capitals and his date, and not a word besides.

BOOKS OF THE WEEK.

Astor, W. W. Valentino: A Novel. Charles Scribner's Sons.
A Handbook of Whist. G. P. Putnam's Sons. 75 cents.
Beard, W. H. Humor in Animals: A Series of Studies in Pen and Pencil. G. P. Putnam's Sons. $2.50.

PLUTARCH'S LIVES. Newly Translated, with Notes and a Life, by A. Stewart, M.A., late Fellow of Trinity College, Cambridge, and the late George Long, M.A. 4 vols. $5.60.

LESSING'S WORKS. Translated from the German. Vol. I.—Tragedies and 'Nathan the Wise.' Vol. II.—Comedies. Vol. III.—Laokoon, Hamburg Dramatic Notes, &c. 3 vols., $4.80. With portrait, &c.

*KANT'S PROLEGOMENA AND METAPHYSI-*cal Foundations of Natural Science. Translated, with Memoir and Introduction, by E. Belfort Bax, author of 'Jean Paul Marat.' With portrait of Kant. $2.00.

MOLIERE'S DRAMATIC WORKS. A new Translation in English Prose, by C. H. Wall. With a short Life and a Portrait. 3 vols. $4.20.

Important New Books

THE GREEK ISLANDS AND TURKEY AFTER THE WAR.

By Rev. Henry M. Field, D.D., author of 'From the Lakes of Killarney to the Golden Horn,' 'From Egypt to Japan,' 'On the Desert,' and 'Among the Holy Hills.'

"I believe that posterity will put Dr. Field's name first in the list of American travel writers. His graceful style, his thorough mastery of language, his graphic picturing, his historical and political references and his sound conclusions, make most fascinating and instructive reading."—*Howard Crosby.*

THE SILENT SOUTH.

Together with "The Freedman's Case in Equity" and "The Convict Lease System." By George W. Cable. 1 vol., 12mo, with portrait, $1.

"Mr. Cable has done a brave thing in making this revelation of the evils left in the South, which he loves—evils which he brings out into the light and air only that they may be cured. His book is a valuable and patriotic contribution to the means of solving the difficulties of the negro question."—*Boston Advertiser.*

TIRYNS:

The Prehistoric Palace of the Kings of Tiryns. The Results of the Latest Excavations. By Dr. Henry Schliemann, author of 'Mycenæ,' 'Ilios,' etc. The preface by Prof. F. Adler, and contributions by Dr. William Dorpfeld. With 188 woodcuts, 24 plates in chromo-lithography, 1 map, and 4 plans. 1 vol., royal 8vo, superbly bound, $10.

"The best, most interesting, and most important of Dr. Schliemann's works."—*Hon. Eugene Schuyler.*

"The great debt which modern scholarship owes to Doctor Schliemann for his discoveries is still further increased by this new book. . . . The results of the excavations at Tiryns will be especially valuable for the light they throw upon the architecture of the prehistoric time."—*Boston Transcript.*

TWO YEARS IN THE JUNGLE.

The experiences of a hunter and naturalist in India, Ceylon and the Malay Peninsula, and Borneo. By William T. Hornaday. 1 vol., 8vo, with maps and illustrations, $4.

"Since the visit of Mr. A. R. Wallace to the Malay Archipelago no such important addition has been made to the data of natural history as is embodied in this record of exact and ample observation in a seldom penetrated field."—*New York Sun.*

"The best theological review ever printed."—*The Presbyterian.*

BOOKS OF THE WEEK 558

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.
Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27.

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 9,000 copies. The Subscription List is always open to inspection.

*** Copies of THE NATION may be procured in Paris of J. G. Fotheringham, 8 Rue des Capucines; and in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; H. F. Gillig & Co., 449 Strand; and American News Reading Room, 8 Haymarket.

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with all physicians who treat mental or nervous disorders.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion, refreshes weakened vital powers in old or young.

It is used by Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

STATUE OF "LIBERTY ENLIGHTENING THE WORLD."

More Money Needed.

The Committee in charge of the construction of the pedestal and the erection of the Statue, **in order to raise funds for its completion,** have prepared, from model furnished by the artist, a *perfect fac-simile* Miniature Statuette, which they are delivering to subscribers throughout the United States at the following prices:

No. 1 Statuette, *six inches in height*,—the Statue bronzed; Pedestal, nickel-silvered,—at **One Dollar each,** delivered.

No. 2 Statuette, in same metal, *twelve inches high*, beautifully bronzed and nickeled, at **Five Dollars each,** delivered.

No. 3 Statuette, *twelve inches high*, finely chased, Statue bronzed, Pedestal, **Heavily Silver-Plated,** WITH PLUSH STAND, at **Ten Dollars each,** delivered.

Much time and money have been spent in perfecting the Statuettes, and they are much improved over the first sent out. The Committee have received from subscribers many letters of commendation.

The *New York World* Fund of $100.000 completes the Pedestal, but it is estimated that $40.000 is yet needed to pay for the iron fastenings and the erection of the Statue.

Liberal subscriptions for the Miniature Statuettes will produce the desired amount.

Address, with remittance,

RICHARD BUTLER, Secretary,

American Committee of the Statue of Liberty,

33 Mercer Street, New York.

Mr. Howells's Women. E. F. W.
How our Railroads have become Luxurious.
Can College Graduates Succeed in Business? James Hunter, M.A.

The present number of *Lippincott's Monthly Magazine* commences a new volume, under new editorial management, and will make its appearance in an entirely new dress. The double column will be done away with, and the page will be printed in large, clear, bold-faced type, specially selected for the Magazine. A new cover of artistic design will add to its attractions.

The distinctive features of *Lippincott's* for the coming year will be as follows:

It will be published promptly on the first day of the month whose name it bears, instead of the 15th of the preceding month as hitherto.

It will be a live periodical, interesting itself in all the current topics of the day, literary, artistic, political, and social, and enlisting in their discussion the ablest pens in England and America. A fair hearing will be accorded to all sides of a controversy, though the Magazine will strictly preserve its own neutrality.

It will be especially strong in fiction. A new novel, entitled "A Bachelor's Blunder," by W. E. Norris, author of 'Matrimony,' 'No New Thing,' etc., who is perhaps the cleverest of the rising authors of England, will run through the year, accompanied by a brilliant serial, dealing with the literary and dramatic life of New York City, from the pen of a writer who prefers to keep his name a secret, but whose every touch reveals an intimate acquaintance with the scenes which he describes.

By special arrangement it will be the authorized medium through which the choicest stories, essays, and sketches by transatlantic authors will reach the American public simultaneously with their appearance abroad. Under this arrangement contributions may be expected from W. H. Mallock, Matthew Arnold, Edwin Arnold, "Ouida," F. Anstey, Wm. Black, Austin Dobson, Andrew Lang, E. Gosse, Swinburne, etc., etc.

It will number among its American contributors such writers as Gail Hamilton, Julian Hawthorne, Harriet Prescott Spofford, John Bach McMaster, J. S. of Dale, Brander Matthews, F. C. Baylor, Bret Harte, Mary Anderson, etc., etc.

It will be the cheapest first-class magazine issued in America. Recognizing the needs of the time for good literature at moderate prices, the publishers have decided to lower the subscription price, commencing with the new volume, to a sum that will place *Lippincott's Monthly Magazine* within the reach of all.

FOR SALE BY ALL NEWSDEALERS.

Subscription Price, $2 per Annum, in Advance. Single Numbers, 25 cents. Liberal arrangements made with those desiring to get up clubs.

☞ A Specimen Number sent postpaid for 25 cents.

ECCLESIASTICAL INSTITUTIONS.

BEING PART VI. OF THE 'PRINCIPLES OF SOCIOLOGY.'

By HERBERT SPENCER.

12mo, cloth. Price, $1.25.

Volume II. of the 'Principles of Sociology' begins with Part IV., on "Ceremonial Institutions," the evolution of which is traced from early to advanced societies. Part V. takes up "Political Institutions," and these with their development by the same method. "Ecclesiastical Institutions" (Part VI.), now published, as the title imports, treats of the evolution of existing religious organizations from their lower forms in primitive society. Its necessary implication, of course, is that the religious, like all other social institutions, have a natural genesis, and can only be explained as derivat ons from preëxisting forms which carry us backward and downward to the religious notions, rites, and observances of the earliest men.

LORD TENNYSON'S NEW VOLUME OF POEMS.

TIRESIAS and Other Poems. By Alfred Lord Tennyson, D.C.L., P.L. F'cap 8vo, $1.50.

"The volume shows clearly that England's Laureate has lost none of his poetic art, and that advancing years may add fresh leaves to his laurel crown."—*New York Observer.*

"The publication of this volume is such a notable event in the literary world that thousands of readers will almost immediately share with the critics the enjoyment of a new volume from the hand of this master of the lyre."—*Boston Herald.*

"We have felt ourselves justified in calling attention to the real worth and beauty of these latest lines of his. The volume is one which all lovers of lyric verse will be glad to read and to own."—*Boston Daily Advertiser.*

BY MR. WALTER PATER.

MARIUS THE EPICUREAN. His Sensations and Ideas. By Walter Pater, M.A., Fellow of Brasenose College, Oxford. Second Edition, globe 8vo, $2.25.

"It is a rare work, and not carelessly to be read. Some exquisiteness of taste, some delight in scholarship, some knowledge of what is best worth knowing in the historic expressions of man's aspiration, and, above all, that 'inward tactfulness of mind,' the reader must bring to its perusal."—*Nation.*

"As a study, deep and sincere, of the religious experiences of the human soul, the sketch of Marius is not limited to the heathen world in which the scene is placed, but contains the essence of struggles for belief in thoughtful minds of all ages."—*Boston Journal.*

"It will be remembered that it deals with the era of early Christianity, and incidentally with the struggle of the new religion against the prejudices of paganism. The polish of the style, the depth and refinement of the thought, the picturesque descriptions, and the lofty sentiment of the book as a whole make it a work far out of the ordinary current of fiction."—*Boston Saturday Evening Gazette.*

The Nation.

NEW YORK, THURSDAY, DECEMBER 31, 1885.

The Week.

A PROTEST is in course of preparation among the fishing people of Massachusetts against any renewal of the Washington Treaty, or any negotiation of any treaty with Great Britain respecting the fisheries, which shall authorize the admission of Canadian fish free of duty. It is stated by the memorialists that they represent a capital of $38,000,000 in the fishing industry, and that they employ 131,426 persons. These figures, it should be borne in mind, are taken from the census of 1880, at a time when the Washington Treaty was still in full force and had been in operation seven years, Canadian fish being admitted free of duty at all our ports. Now, according to the theories of "protection," our fisheries ought to have been ruined in 1880. Instead of 131,426 persons (including Canadians) employed by us in catching fish in competition with the other paupers of Canada, we ought to have had none at all. In fact, it ought to have been impossible for us to catch any fish in the past twelve years, under the régime of free trade, or during the previous twelve years (1854-1865) when the Reciprocity Treaty was in force. Fish ought not to bite under such degrading conditions.

But it appears that the growth of the business has been very remarkable during the free-trade era. According to the census of 1870, the whole number of persons employed in the fisheries, including oystermen and lake fishermen, was only 27,106. If the number increased to 131,426 in ten years, it looks like a gain of 400 per cent., which is more than most of the protected trades can show. If any argument is to be drawn from the statistics, it is one which speaks volumes for free trade. At all events, nothing can be proved from them in favor of the opposite policy. Most of the protected classes can say that they would be ruined by free trade, and we cannot positively prove the negative of their affirmations, because we have not tried them under free-trade conditions. But the fishermen say that they will be ruined if they are not protected, whereas they have thriven as well as any class or calling in the country, and much better than the average, without any protection whatever. The rights of the people who consume fish are, of course, not worth considering; else it might be shown that the proposed treaty would be a good thing for us even if we got nothing valuable from the Canucks in exchange for the free admission of fish. The free-trader would say that to get rid of a tax on the food of the poorer classes, like getting rid of the old corn laws of England, would be a boon and a blessing, even apart from the privileges accorded to us by the Washington Treaty. But such remarks would be irrelevant and confusing.

It is very encouraging to note that there is a very general unanimity of opinion in the Republican press in favor of the repeal of the Tenure-of-Office Act. A few extreme partisan papers which still adhere to the notion that as a Democrat the President is bound, if he is given the power, to ruin the country and rob the Treasury by turning over the Government to rebel brigadiers, oppose the repeal, but they form an insignificant minority. The larger and weightier portion of the press take the position that the law gives to the Senate power which the Constitution intended to have exercised by the President, and that its only basis for existence was the accidental presence in the executive office of a man who could not be trusted with it.

Trustworthy reports from Washington represent that Speaker Carlisle is more troubled about the Chairmanship of the Coinage Committee than about any other feature of the whole committee business. But it is a very simple question, after all—only whether the Speaker will have the courage of his convictions. He realizes that he made a bad blunder two years ago in giving this important place to a financial lunatic like Bland, of Missouri; he knows that it would be worse than a blunder to vest him with such power over the coinage now, when the danger of a crisis is so much greater than it was two years ago. If he reappoints Bland, it will mean that he is afraid to do what he knows to be his duty, through his dread of the abuse of the silver men. Mr. Carlisle has come to the front by impressing the country with the conviction that he is a conscientious man, and we cannot believe that he will now prove himself unworthy of so enviable a reputation.

The Keiley affair has no end of surprises. Mr. John M. Francis, our late Minister to Austria, adds a fresh one in a *Tribune* interview. He says that it is not true that the Austrian Government rejected Mr. Keiley because his wife was a Jewess—that this was a suggestion dropped incidentally and confidentially by Count Kálnoky to Baron Schaeffer when the former was trying to "hint" Mr. Keiley out of the way in order to avoid the necessity of rejecting him outright. Mr. Francis adds that the Austrian press, which is almost wholly under the control of Hebrews, were unanimous in opposing the reception of Mr. Keiley. It is impossible that they could have taken such a stand if his wife's religion had been the real reason for his rejection, since no Jew of any standing was ever known voluntarily to put a stigma upon his own race and creed. The real reason for Keiley's rejection by Austria was the same as for his rejection by Italy, viz., the speech against King Victor Emmanuel in 1871. Austria had no objection to the speech, *per se*, but as a Power friendly to Italy, and a near neighbor, she saw her interest in not receiving an envoy who was objectionable to Italy. The compliment she thus paid to Italy overbalanced any possible loss of good-will in the United States; and as to the latter it is not known that she has lost any by rejecting Mr. Keiley.

We wonder what Count Kálnoky will think of the refusal of all the Troy hotels to lodge the thirteen colored Jubilee Singers, male and female. This is quite as bad, is it not, as the refusal of the Austrian Court to receive Mrs. Keiley? Do these hotel keepers not know that prejudices of this kind are not recognized by the American system of government; that provision for the protection of men and women against such inhuman discriminations is "embedded in the written charter and interwoven in the moral fabric of its laws, and that anything that tends to invade a right so essential and sacred must be carefully guarded against, and that Americans, ever mindful of the sufferings and sacrifices necessary to obtain it, will never consent to its impairment for any reason or under any pretext whatsoever; that in harmony with this essential law is the almost equally potential unwritten law of American society that awards respect and delicate consideration to the women of the United States, and exacts deference in the treatment at home and abroad of the mothers, wives, and daughters of the republic"?

There has been a sudden outburst of indignation against the exclusiveness of the Cabinet officers at Washington, who are held to be more "stuck up" than any Republican Cabinet officers that ever were. Mr. Henry Watterson has pitched the key in the Louisville *Courier-Journal*. He finds a great departure from Jeffersonian simplicity. You must put on a very humble air if you want to see a Secretary. You must send in your card with many honeyed words to the pompous doorkeeper, but you really have no chance of getting in at all unless you are "backed by influence." It is comforting to know that "the case is hardly one of the beggar on horseback; it seems to spring from the lack of experience and judgment." On the other hand, it is distressing to learn that these rebuffs are mostly suffered by Democratic politicians and journalists, which may be due to the fact that more Democrats than Republicans expose themselves in this way. We have an explanation to make which may soften the growing asperities in the party. It is well remembered that one of the leading arguments for a change of administration was that the books needed overhauling. They had been kept by the Republicans more than twenty years: it was necessary to find out what was in them. Now it is fair to presume that when the Secretaries are not busy discharging their daily duties, they are employing their leisure in overhauling the books. Of course no such extra work was imposed upon Mr. Arthur's Cabinet, because the books, from their point of view, were all right. Not so with Mr. Cleveland's Cabinet. They are bound to find out what the books contain, and it does not lie in the mouth of any Democratic journalist to find fault with them while they are pursuing the investigation.

The Bourbon Democrats in Congress who want to "rebuke" the President, get little sup-

port from their constituents. The Savannah *News*, one of the most influential Democratic papers in Georgia, tells Representative Wheeler, of Alabama, that his attempt practically to repeal the Civil-Service Law and "put the spoilsmen at the front again" will never come to anything, and that Senator Hampton's bill, making it unlawful for a Senator or Representative to solicit the appointment of an applicant for office or to recommend an applicant, "is more nearly in harmony with public sentiment" and stands a much better chance of becoming a law. In the same spirit the Jacksonville *Times-Union*, the leading Democratic paper of Florida, tells Senator Beck and the other old fogies who resent the President's progressive course, that "they have demonstrated their incapacity for leadership, and that the people in the last Presidential campaign recognized that fact and set them aside, putting the so-called 'new men' in their places"; and it addresses to them a sufficiently explicit "word of warning."

The Rochester *Union*, a scurrilous Jeffersonian paper, is greatly taken with a bill introduced into the House by Mr. Wheeler, of Alabama, amending the Civil-Service Act, so that an appointing officer may designate a particular person for examination, and, on his being found capable, may appoint him to office. The germ idea of this bill, the *Union* says—and it is in great glee over the discovery—is to be found in the fact that examinations of this kind are already held for admission to West Point; that is to say, that Congressmen designate candidates for admission, and they are then examined to see if they are fit, and cadetships are places in the service of the Government. But this is mere word play. Cadets are not servants of the Government in the sense in which other officers are. They are Government pupils, and their pay and rations are simply a means of supporting them while they are learning a trade. They are examined in order to see whether they are fit to receive a certain kind of instruction, and not to see whether they are competent to render certain services. Moreover, the *Union* is in error as to the unconstitutionality of the Civil-Service Act, probably owing to the editor's never having read it. A scurrilous editor hardly ever reads anything carefully. The act does not impose any duty on the President or in any way control his appointing power. It simply "authorizes" him to appoint Commissioners to draft certain rules and to make appointments under these rules, if he sees fit. There is nothing mandatory about it. He need not appoint the Commissioners, and need not enforce the rules, unless he pleases.

Brooklyn was the first city in the country to apply the principles of civil-service reform to the administration of municipal affairs. As soon as the Legislature of 1883 passed the act permitting but not requiring the introduction of the merit system in the government of cities, Mayor Low appointed a Commission, prepared a set of rules, and bent his energies to the practical application of the reform theory. The Commission has just presented its report for the second full year of its operation, which, inasmuch as the first twelvemonth was necessarily a period of experiment, is really the first year of ordinary business administration of an established system. The report contains abundant evidence of the practicability and advantage of the reform. The heads of the various municipal departments, some of whom were at first doubtful as to the wisdom of the new system, agree that it works well; that while they themselves are entirely relieved from the harassing pressure for appointments, the average ability and official usefulness of those appointed from the eligible list formed upon competitive examinations have been much higher than under the spoils system, and the humiliating sense of personal favor and political obligation has given way to a knowledge that permanence depends solely upon ability.

The report effectually disposes of two or three of the old objections of the spoilsmen. One of these has been that the examinations were not "practical." The Commissioners show in detail that the examinations for entrance to various branches of the service differ as radically as the duties to be discharged, and that the inquiries in each case relate to those matters which will best test the relative capacity and fitness of applicants. Thus, in the case of firemen and policemen, physique has a grading of 40 out of 100, while in the case of chemists physique is left out of the account. On the other hand, technical questions as to familiarity with the science count for 90 out of 100 in an examination for chemists, while intelligence in writing, spelling, simple arithmetic, and Brooklyn data is rated at only 15 out of 100 in the case of a fireman. In other words, scholastic tests hold a very subordinate place in the examinations, except in the rare cases where they are the only tests which will determine fitness. As a natural result of this common-sense system, the favorite theory of the spoilsmen that nobody but college graduates could get into office under the competitive method has been utterly overthrown. Of 445 candidates who reached the eligible lists, only 23 had received a collegiate or scientific education, and only 31 an academic education, while 391 had had merely a common-school education. Moreover, of the 23 who had had the collegiate or scientific education, 7 were candidates for surgeons and 4 for chemists, positions plainly requiring a technical training.

Further evidence of the widespread ruin resulting from Mr. Cleveland's Administration is furnished by the leading Blaine organ of New England. The Boston *Journal* of Christmas morning thus summarized in its editorial columns the annual report regarding the savings banks of the State:

> "The abstract of the report of the Commissioners, which is published to-day, showing as it does an increase in the deposits of $12,278,265, and of 22,779 of open accounts, proves that the year 1885 has been a prosperous one for the people who make deposits in savings banks, by which we mean people who save small amounts annually from their earnings or their small incomes, and put them into a savings institution because they cannot use them themselves in business. The increase during the year in the number of deposits of 45,254 compared with the number in 1884, is a further evidence of the general prosperity of that portion of our people who may be assumed to be wage earners."

It would be amusing to print such extracts in parallel columns with extracts from the ante-election prophecies in 1884 of the distress which "wage-earners," above all others, would incur if Blaine should be defeated; but we refrain.

In the December number of the *North American Review* appeared an article by "the editor" which professed to describe the political situation in Delaware. This article declared that the Democrats abused their power in the imposition and collection of poll-taxes in such a way as to "disqualify Republicans in general," and that "a very large part of the citizens of Delaware, belonging to one of its great political parties, are as thoroughly disfranchised, by legal chicanery, as any community of negroes in Mississippi were ever disfranchised by physical intimidation." The wild absurdity of these statements was at once exposed by the *Evening Post*, which pointed out that the ratio of actual voters in Delaware, with its poll-tax (782 out of every 1,000 adult males), exceeded the ratio in Maine, which imposes no poll-tax (760 out of 1,000); and that, so far from Republicans being generally disfranchised, they cast more than 43 per cent. of all the votes cast in the last election. The average editor might be dismayed by the incontrovertible evidence of census reports and political almanacs that he had not known the most elementary facts about the subject of which he was treating. Not so the editor of a sensational sheet like the *North American Review*. He boldly meets the issue by procuring and publishing in his next number a "testimonial," in the true patent-medicine vein, from twenty-four citizens of Delaware that they have taken his nostrum and that it is "excellent." But Mr. Rice has still something to learn from the patent-medicine men. A "testimonial" is well enough in its way, but it does not carry the weight of pictorial argument. If he really wants the public to credit his claims, he should publish pictures of his Delaware vouchers "before taking" and "after taking." A stronger sense of the ridiculous would have kept him from trying to put down mathematics by a certificate of character.

"But a week remains in which the citizen who wishes to vote next year can register." Such was the leading paragraph in the editorial columns of the Providence *Journal* on December 24. Rhode Island will have two elections in 1886, one for State officers and members of the Legislature, on the first Wednesday in April, and the other for two Representatives in Congress, on the Tuesday after the first Monday in November. The citizen who wishes to vote in the more remote of these elections in 1886—even unless he lives in a town of less than 7,000 inhabitants, where the rules enforced are not so rigorous—must be registered by the last day of 1885, and he must pay a registration tax of $1 at the time his name is entered on the roll of qualified voters. In other words, every man living in a city or large town (and a majority of Rhode Islanders live in the cities of the State) who wants to cast his ballot for either Governor or Congressman next year, must pay his tax and be registered before the end of this year—more than three months before

the earlier election and more than ten months before the later. He must do this, too, at just that season of the year when the poor man finds it hardest to spare a dollar for anything outside the necessities of his family.

Human ingenuity could not easily devise a plan better calculated to reduce the number of qualified voters, especially among those dependent for support upon their daily wages, than this Rhode Island system. It was framed by the Republican managers for the express purpose of weakening the Democracy, who were stronger than the other party among the poorer voters in the great manufacturing establishments of the little State. If voters were allowed to register until near election day, Democratic candidates might pay the taxes of poor men who would vote their ticket. In fact, they used to do so, and so forced the Republican managers to do the same thing. It was to break up this practice, and thus to insure their hold upon the State, that the Republicans passed this law, which of course practically disfranchises some of their own party, but not nearly so many as of the other. The injustice of requiring a man to register nearly a year before he will vote for Congressman or President, is so outrageous that, if a Democratic State in the South were to adopt such a system for the sake of keeping from the polls poor black men, who are expected generally to vote the Republican ticket, Republican organs at the North would never tire of preaching sermons about it. But as it is a Republican State in the North which follows the practice, for the sake of keeping from the polls poor white men, a majority of whom would vote the Democratic ticket, the Republican organs will have nothing to say about it.

When many good citizens of Boston appealed to the Massachusetts Legislature last spring for the passage of a bill taking the appointment of Police Commissioners from the Mayor and giving it to the Governor, we pointed out that it was an unmistakable sign of a decay of public spirit which was discouraging, if not alarming. Fresh evidence that this retrograde tendency is gaining force is now furnished by the movement toward taking the control of the street cars from the city authorities and giving it to State officers. There has been for some time past a great deal of trouble with the horse railroads, which need to be taken in hand by the Aldermen, but instead of going to work and electing men who could be trusted to protect the public interests, the citizens are talking about turning the job over to the State Railroad Commissioners. At this rate local self-government will before long be dead in the very spot where it had its birth.

The affairs of the city of Elizabeth, N. J., are having a pretty wide discussion in the press, consequent upon the recent levy of the town authorities upon two locomotives belonging to the Singer Sewing Machine Company, and the closing of the company's works as a measure of retaliation. The facts have been notorious, and of almost world-wide celebrity, that the city borrowed a million dollars or more from the Singer Company some years ago, and afterward sought to repudiate the debt by the roundabout process of abandoning its own financial machinery and getting the State of New Jersey to set up a new one, so that it might collect its taxes without paying its debts. The Singer Company happens to be a large taxpayer as well as a large creditor of the city, and it resolved, as it had an undoubted right to do, to make the one offset the other. Whether the plan it adopted of boycotting the city by closing its works in order to secure its rights was justifiable or not, it is certain that the city of Elizabeth is not the one to complain of it upon any moral grounds. Nor has the State of New Jersey any right to complain. The trick by which the judgment of court obtained by the Singer Company against the city was frustrated was a particularly scurvy one, being much the same as the Coupon-Killer Act of the Virginia Legislature.

An advertisement of the "Sunday" *Tribune* in the Boston *Journal* contends that "though controlled by one mind, the *Tribune* is the product of a multitude of the brightest pens of the day." It is proper to explain, however, that there are very few persons besides the proprietors who consider the *Tribune* the product of mind. About no phenomenon has the spread of materialistic views been so marked as about that journal. It would be hard now to find anybody under fifty who considers the force which produces it anything but a form of matter, or believes that anything known as mind or "*mens*" moves the mass or stuff ("*moles*" or "*Stoff*") which it contains. In fact, it would be difficult to mention any one agency which has done so much to shake popular belief in the transcendental view of the origin of things as the *Tribune*. In the present state of the public mind of course the regular appearance of a complicated thing like a daily journal, without any sign of intelligence behind it, is a terrible promoter of Agnostic theories.

It is a somewhat curious fact that while the Life-Saving Service in this country is a department of the general Government and is supported by the National Treasury, the same service in Great Britain is in charge of a charitable organization, and is supported entirely by voluntary contributions. This organization is known as the Royal National Life-Boat Institution, and it numbers among its patrons the Prince and Princess of Wales. It not only maintains "life-boat stations," but rewards fishing and other crews not in its employ when they save lives on the coast, presents medals and pecuniary rewards to its own corps, and grants pensions to the widows and children of lifeboatmen whose lives are lost while on duty. When the lifeboatmen are paid by vessel owners for salvage services, then the Institution does not reward them; in other cases it pays them, whether they save lives or not. A few comparative statistics of the service in the two countries are interesting. Taking the reports for 1884, we find that the British Institution maintained on the coasts of England, Scotland, and Ireland 289 stations, while the American Life-Saving Service maintained 201 stations. The British Institution expended in its work £42,787 (say $213,935), while the cost of maintaining our service was $766,834 64. The British life-boat crews assisted 95 vessels; the American crews 337 (not including small craft). The total number of lives saved by the British lifeboatmen was 633, to which may be added 159 saved by other vessels whose crews the Institution rewarded. The lives saved by the American service numbered 4,412. In a recent speech the Prince of Wales said that this Institution in his country, in the sixty years of its existence, had saved nearly 31,000 lives. The statistics of our Life-Saving Service show that during the period from November 1, 1871, to June 30, 1884, it had saved 25,199 lives, and only in a part of that time has its territory embraced the whole of even our sea-coast, starting as it did with only Long Island and New Jersey in 1871–72, and taking in Texas only within the last four years. These statistics attest the efficiency of the American service, and are an argument in favor of continuing to keep it "out of politics."

The faint suggestion of the London *Times*, which is probably thrown out as a feeler, that the Parnellites should be excluded from the House of Commons and martial law proclaimed in Ireland, is a fair specimen of the perennial insanity which has made the Irish question the ugly thing it is to-day. Take up the biography or journal of any English statesman or public man who has flourished since 1800, and we find the Irish question coming up every year, with much lamentation over it, and much acknowledgment of the justice of Irish complaints. But we also find, almost invariably until Gladstone's day, that, partly owing to the pressure of other business, and partly to the indifference of English opinion, the only thing that could be agreed on and passed was a coercion bill of some kind. The very turbulence which the grievance was acknowledged to have caused was regularly produced as a reason why the redressal of the grievance should be postponed. The crisis of course kept steadily recurring with increasing gravity, but was dealt with in the same way, until Gladstone took up the Church question. It now presents itself in a graver form than ever, and there are doubtless thousands of madmen in England who, like the writer in the London *Times*, can think of no better solution than "troops."

The reëlection of M. Grévy, at his advanced age and with his indifference to office, as President of the French Republic, shows both that he is the easiest candidate for the Republicans to unite on, and that the place has fallen into comparative insignificance. Were it what M. Thiers and Marshal MacMahon tried to make it, there would probably have been a little fight over the election of Grévy's successor between the two sections of Republicans. To the Royalists it is more important. What they would like would be to get into it somebody who would keep it warm for a monarch of some kind, and hence the fury at the discovery of their own impotence the other day in the Convention. There has been such a slaughter of reputations since Grévy was first elected that it is hard to say where his successor is to be found. There is nobody left who achieved any fame in or immediately after the war, and the ante-bellum Republicans of mark are all dead.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 23, to TUESDAY, December 29, 1885, inclusive.]

DOMESTIC.

THERE seems to be no reason to expect that any very large number of nominations to office made by the President will be rejected. A prominent Democratic Senator remarked recently that the President had many grateful friends among the Republican Senators, and added: "I could name more than half-a-dozen Republican Senators who have more friends in good fat Federal offices than I have, and half-a-dozen more who have about as many as I. The President has had no difficulty whatever in securing himself Republican support in the Senate, and, from what has already occurred in executive session, it is very plain that those Senators whose relatives and personal friends have not been turned out of their places are willing and ready to confirm all nominations, or at least nearly all."

Contrary to expectation, Mr. John Bigelow has declined the nomination of Assistant United States Treasurer at New York. His letter has not been made public, but it is said that he is unwilling to assume the heavy responsibilities of the office. Other reports assert that Mr. Bigelow's refusal is an indication of Mr. Tilden's displeasure with the Administration. These are denied at the White House.

The animated contest now going on as to the confirmation of the Postmaster of Chicago, which has assumed almost a one-sided political aspect, by reason of the opposition developed against the Democratic nominee within the ranks of his own party, has incidentally brought out an interesting fact, namely, that important modifications of the civil-service rules, approved by the President as long ago as the 27th of last November, have only just reached the Civil-Service Commissioners, and are yet in the hands of the printers and not yet promulgated. The course of proceeding in these matters is for the President to notify the Secretary of State of the modifications which he has approved; then the Secretary of State prepares a copy of the modifications and forwards that list to the Civil-Service Commission, who, on receipt thereof, order its promulgation. Among the rules thus modified are the following: That the local boards of examiners shall in future only certify three names to the appointing officer, and no name can be certified to him more than three times, except on special request of the appointing officer. Under the old rules the names were to be certified four times, and the appointing officer was obliged to appoint four out of seven names certified to him, while now he will appoint three out of six. This makes it easier to get rid of persons thought not fit for appointment.

Friends of General Sparks, Commissioner of the Land Office, ridicule the statement that he desires to be relieved of his present position and to be appointed to some foreign mission. They say that he has the most exalted opinion of the importance of his present duties from a political and official standpoint, and is enthusiastic in his work. He is said to have the President's full confidence, and to be very anxious to carry on the work which he has begun.

In view of the very general comment as to his policy, he has felt constrained to issue a new series of regulations for registers, receivers, and special agents of the Land Office, which have just been promulgated. They modify in many important particulars his recent sweeping orders. They provide that homestead or preëmption claimants who have made bona-fide settlements upon public land, and who are living upon, cultivating, and improving the same in accordance with law, with the intention of acquiring title thereto, shall be permitted to cut and remove, from the portion thereof to be cleared for cultivation, so much timber as is actually necessary for that purpose or for buildings, fences, or other improvements on the land entered. In clearing for cultivation, should there be a surplus of timber over what is needed for the purposes above specified, the entry man may dispose of such surplus; but it is not allowable to denude the land of its timber for the purpose of sale or speculation before the title has been conveyed to him by patent. Where it is ascertained that timber is being cut upon a homestead or preemption claim for the purpose of sale or disposal, the special agent must report the facts. Squatters upon public lands have no right to cut timber therefrom for any purpose.

The Secretary of the Treasury on Tuesday issued a call for $10,000,000 United States bonds.

In response to the urgent telegram from Senator Fair, the Secretary of the Treasury has decided to send a search party after the missing whaler *Amethyst*, supposed to have been cast away in Behring Sea. She had a crew of forty men. It is probable that either the *Rush* or *Corwin* will be sent to her relief.

The Washington *Republican* has published, as the result of an exhaustive inquiry concerning the future votes in the House of Representatives in regard to the unlimited suspension of silver coinage, a table showing that 143 Democrats and 52 Republicans are against suspension, and 39 Democrats and 91 Republicans in favor of it. The noticeable feature in connection with the matter is the division of the members upon sectional lines. The West and South are practically a unit for coinage, while the East and Middle States appear to be almost as solidly in favor of suspension. There is good reason to doubt the accuracy of this compilation.

President Cleveland has written the following letter to Senator Voorhees: "I understand that a movement is on foot to erect a monument to the memory of the late Vice-President, and that it is to be a tribute to his worth and services on the part of his friends and associates. This project is so fitting and appropriate that it seems to me that it must meet with general approval. My relations with Mr. Hendricks, both personal and official, were such that it would be a source of much satisfaction to me to see this good work promptly begun, and at the proper time I hope I may be allowed to aid in the undertaking."

The Apache depredations in Arizona are said to be much worse than generally reported.

The proclamation issued by the Governor of Arizona, on December 23, warning the people of that Territory to desist from attempting retaliatory measures against the Indians on the San Carlos Reservation for the depredations committed by hostile Indians, has created surprise and indignation among the people of the Territory generally. The entire press of Arizona, irrespective of party, unite in condemning the act as entirely uncalled for.

Senator Manderson and Congressmen Springer and Laird on Tuesday discussed with the Secretary of War the situation in southern New Mexico in relation to the Apache troubles. They presented to him the defenceless condition of the people, and made known their purpose to introduce a bill in Congress soon after the recess providing for the raising of a body of troops for the special purpose of hunting and, if necessary, exterminating the murderous bands which have been making that region a desert. They propose that these troops shall consist exclusively of frontiersmen and be placed under the command of army officers; that they shall be temporarily enlisted for this special service, and equipped, mounted, and provided for in such a way as to be able to follow and fight the savages in their fastnesses. The Secretary entered heartily into their plans, and promised to do everything in his power to forward the purposes they have in view.

A force variously estimated at from 100 to 150 men are congregated at Juan Maldenado's ranch, four miles from Rome, Texas, arming and preparing for a raid on Mier, Mexico, which is about seven miles from the ranch. They are partisans of one of the defeated candidates for Mayor in the recent election at Mier, and on raising a riot were driven out by the Federal troops. The rioters retreated across the Rio Grande, and fired on the troops from the American bank. United States troops have started to disperse them.

The number of immigrants landed at Castle Garden for the year 1885 is about 30,000 less than the number last year. With the exception of the months of May and August the arrivals each month have shown a decrease as compared with the corresponding months last year. The total number landed at this port since the 1st of January, including the arrivals of Tuesday, is 280,745. For the corresponding period last year the arrivals numbered 319,435. The class of immigrants landed is much better than in former years, and the Commissioners have been compelled to send back only a very few paupers.

Three hundred and fifty cigarmakers from New York and other points are bound for San Francisco. The delegation, it is said, is to take the place of Chinamen in the Chinese quarter of San Francisco.

The first cremation in Buffalo took place on Sunday at the new temple of the Cremation Company.

Governor Hill has designated Judge Hooper C. Van Vorst, of the Superior Court of this city, and Judge Miles Beach, of the Court of Common Pleas, to serve in the Supreme Court of New York County for the year 1886.

John A. McCall, jr., has resigned the office of Superintendent of Insurance of this State, to accept the position of Comptroller of the Equitable Life Assurance Society of the United States. Governor Hill has appointed as his successor State Treasurer Maxwell. Superintendent of Public Instruction William B. Ruggles will resign his office to become Mr. Maxwell's deputy.

A decision in favor of the plaintiff in the suit of the late ex-Senator Sharon against Althea Hill, brought to declare void the alleged marriage contract, was rendered by Judge Sawyer in the United States Circuit Court at San Francisco on Saturday.

The Rev. Dr. Daniel J. Noyes, who for more than thirty years was a professor in Dartmouth College, died at Chester, N. H., recently, in the seventy-fourth year of his age.

Professor Edwin David Sanborn, of Dartmouth College, died on Tuesday in this city, at the age of seventy-seven years. He was a native of Gilmanton, N. H., and was graduated from Dartmouth in the class of 1832, which included a number of well-known men. He was identified with the College through the greater part of his life, filling several important professorships. His general knowledge was very extensive. Among his literary productions was a 'History of New Hampshire.' He married a daughter of Ezekiel Webster (brother of Daniel Webster), and one of his children is Miss Kate Sanborn, the writer and lecturer.

Benjamin Kaye Heaton, a graduate of Yale College in the class of '85 and a member of the Junior Class of the Yale Law School, died in his room in the old laboratory, on the College campus, on Monday, from overstudy. He was trying to do two years' work in the Law School in one.

FOREIGN.

In the French Chamber of Deputies on Wednesday Premier Brisson insisted that the full amount of the Tonquin credits asked for be granted. He said that it would be dishonorable for France to break the treaties with China and Anam, and it was equally impossible for France to abandon her allies. It was necessary to strengthen the French garrison at Hué in order to foil Anamite intrigues. The Government desired not to annex Anam, but to exer-

cise a protectorate over it and to effect a reconciliation conducive to the honor and interests of France, as had been done in Madagascar. He appealed to the Chamber to uphold the national honor. The credit was adopted by the very small majority of 274 to 270, and it became rumored on Sunday that the Cabinet would probably resign.

M. François Jules P. Grévy was reëlected President of the French Republic at Versailles on Monday, on the joint vote of the Senate and Chamber of Deputies acting as a national assembly. The balloting was carried on amid great excitement. Only five members of the Right cast ballots. M. Grévy's total majority in the joint ballot was 135. The space reserved for visitors in the chamber in which the election took place was crowded long before the hour appointed for the election. The members of the Right became so turbulent that the President threatened to suspend the sitting. The members of the Right then asked for time to speak before the vote was taken, and, their request being refused, several of them tried to gain the tribune. A fight ensued between a member of the Left and one of the Right. Several blows were exchanged before the combatants could be separated by their friends. A lull in the demonstration then followed, and the balloting took place.

President Grévy received despatches from all the European Powers, and also one from the Prince of Wales, congratulating him on his reëlection. M. Grévy will not send a message to the Chamber of Deputies. M. Grévy and the Cabinet Ministers urged M. Brisson, the Prime Minister, to remain in office, assuring the latter that the Government suffered no Parliamentary defeat by the closeness of the recent vote on the Tonquin credit. On Tuesday, however, M. Brisson insisted on his resignation, and it was accepted. M. de Freycinet was summoned to form a Cabinet, and will probably accept.

M. Clémenceau's recent speech in the French Chamber of Deputies during the debate on the Tonquin credit, in the course of which he took occasion to charge M. Ferry with having sought the aid of Prince Bismarck in the settlement of the Franco-Chinese difficulty, has caused many indignant comments in Germany.

The *Pall Mall Gazette* says: "By the treaty of peace between France and Madagascar the former virtually abandons her pretensions in Madagascar, and the ruler of the Hovas is recognized as the sovereign of the whole island. The statements about a French protectorate and a war indemnity are nonsense. The draft of the treaty does not mention a protectorate, while the so-called indemnity is intended to reimburse Europeans whose property has been damaged by the war, and not a penny of it will enter the French treasury."

Louis Prosper Gachard, the historical writer, is dead. He was born in Paris on October 12, 1800. He was trained as a practical printer, went to Belgium, and associated himself with the movement for independence in that country. He was naturalized and appointed Keeper of the Public Records. He was Secretarry of the Historical Commission, member of the Academy of Brussels, and corresponding member of the French Academy of Sciences.

Tuesday was the seventy-sixth anniversary of the birth of the Right Hon. William E. Gladstone. He received more than 400 letters of congratulation.

The London Press Association has published answers from sixty Liberal members of Parliament on the home-rule question. Nine give unconditional support to home rule. These include J. E. Thorold Rogers, Labouchere, and Bradlaugh. Nine give their support with the condition that it will not jeopardize the union. Fifteen may best be described as watching and waiting. Twelve members will support local boards, but nothing more. These include Goschen, Richard, and Chamberlain. Mr. Forster, of course, denounces home rule in any form. Eight members, strangely including several advanced Radicals, say that circumstances do not call for a serious consideration of the question. Mr. Herbert Gladstone is afraid the matter can only be settled by party warfare.

Mr. Michael Davitt in an interview respecting home rule for Ireland said: "The alleged proposals of Mr. Gladstone recently published are a good basis for a settlement of the Irish question. I advocate Daniel O'Connell's plan for a minority representation in the Irish Parliament. I would give 75 seats to the Loyalists and 225 to the Parnellites. The police should be disarmed. Irish landlords would be impossible under an Irish Parliament."

Patrick Egan, President of the Irish National League of America, on being questioned as to his views on the present phase of the agitation for home rule in Ireland, said: "I consider the principle of home rule as virtually settled, both English parties admitting the necessity for such a change. I am of opinion it will be accomplished by a junction of Parnell's forces with those of Gladstone when the critical time comes; not an alliance, as so frequently stated, as it would be contrary to the principles of the Irish party to ally themselves with either of the English parties, but by independent action in the same direction. Ireland does not look for anything from Gladstone or any other English leader from love, but from their fears. With eighty-six followers Parnell can simply make government in England impossible, unless whatever party may be in power comes to his terms. Then, in the event of failure on the part of Mr. Parnell and his party to obtain through constitutional methods a recognition of Ireland's legitimate rights, England would have to deal with the Irish revolutionary element, embracing the most daring, the most intrepid, the most devoted men of our race in Ireland, in England, and here in America. This section of our countrymen want to see the national question settled peacefully and constitutionally if possible; but if constitutional methods should fail, I believe there are no lengths to which they will not go to accomplish their purpose."

The London *Economist*, referring to the political situation, says: "The Tories and Liberals have drawn nearer together, and have resolved to reject the crude proposal for an independent Irish Parliament. The British Parliament is still master of itself."

Evidences of bad feeling among the local factions in Ireland have shown themselves recently. An example occurred on Saturday when the house of a man named Blake, in Creaghlane, Limerick, was besieged by his political opponents. Blake's friends rallied to his support and a desperate conflict ensued. It was fully two hours before the police succeeded in restoring order. Twenty persons, including several women, were seriously injured. A large number of arrests were made.

All the efforts to harmonize the differences between the Cork Steam Packet Company and the Cattle-Dealers' Association have failed.

The London *Times* in an editorial on Wednesday, without advocating such extreme measures, suggests that the Irish difficulty could be solved in three months by the exclusion of the Parnellites from the House of Commons and the proclamation of martial law in Ireland.

The Tory Government intend to introduce a large measure of local government in Parliament. Sir M. Hicks-Beach, Chancellor of the Exchequer and leader of the House of Commons; Sir Richard Cross, Home Secretary; Mr. Edward Stanhope, Vice-President of the Council; and Mr. Arthur Balfour, President of the Local Government Board, have been appointed a committee of the Cabinet to draft such a scheme for the whole kingdom.

Mr. Richard Belt, the English sculptor, who some time ago recovered £5,000 damages in his suit for libel against Mr. Charles Bennett Lawes, the sculptor, has become bankrupt. It is alleged that he borrowed £12,000 from Sir William Neville Abdy upon jewelry which is almost worthless.

General Booth, in begging the Salvationists for the sum of £30,000 for current expenses of the army for the year 1886, states that he will not publish the accounts of past expenses.

Dr. Samuel Birch, the well-known Egyptologist, is dead. He was born in London November 3, 1813. At an early period of his career he paid particular attention to the study of Egyptian hieroglyphics, and his researches attracted the notice and secured him the lasting friendship of the late Baron Bunsen, with whose labors he was associated in his work on Egypt, Mr. Birch having contributed the philological portions relating to the hieroglyphics. His labors extend over most branches of antiquities. Besides his researches in hieroglyphics, he published memoirs and dissertations on Greek, Roman, and British antiquities, numismatics, and ethnography, and assisted in the editing of cuneiform inscriptions. He was the author of a great number of books.

The British military authorities have decided to attack the Sudanese rebels at Koyeh.

It is reported that King John, of Abyssinia, is engaged in the occupation of Massowah, and is preparing to make war upon the Italians.

Belgrade advices on Wednesday indicated that there were signs of a revolt in the Servian army.

Servian troops on Sunday made an attack on a Bulgarian frontier village, and were twice repulsed. The Bulgarian Government will protest against the violation of the armistice. Prince Alexander entered Sofia on Saturday at the head of a body of troops. He was received with great enthusiasm.

The Czar is about to reinstate Prince Alexander of Bulgaria in his former rank in the Russian army. It is believed that the compact between the Czar and Prince Alexander, by which Russia recognizes the Bulgarian union, is the prelude to a Russian campaign in the spring and the final dismemberment of the Turkish Empire. The Balkan Conference will reopen at Constantinople on January 17. A motion in favor of the Bulgarian union will be supported by Russia and Italy.

It was asserted in London on Monday that Russia and Austria were secretly arming, and had sent orders to England for large quantities of stores for their respective armies.

The German Foreign Office has notified Mr. Pendleton, the American Minister, that it is intended to expel the German-Americans residing at Schleswig who emigrated to the United States just before becoming liable to military service, and returned after being naturalized. The recent order of expulsion of other German-Americans remains suspended.

The London *Chronicle* on Tuesday morning had a despatch from Berlin, according to which it appears that the recent allocution of Pope Leo XIII. has not been received with favor at the German capital. The tone of the allocution, it is thought, shows that the pretensions of the Vatican have been encouraged by the deference which was shown to it in asking the Pope to mediate between Spain and Germany in the Carolines affair.

German financiers are taking much interest in the development of railroads in China and it was publicly announced recently that the Deutsche Bank, the Disconto Gesellschaft of Berlin, and the Krupp Iron Works Company, will, immediately after the new year, send delegates to China with a view of negotiating with that Government in the matter of establishing a railroad system throughout the empire.

The Roman Catholic Bishop of Montreal has issued a mandate prohibiting the clergy from taking part in Riel agitations, or celebrating masses for the repose of his soul, without his (the Bishop's) special permission and authorization.

WHEAT AND COTTON.

PERHAPS the greatest surprise of the commercial sort that has ever come over this country is the fact that, at the time of year when exports of breadstuffs are commonly most active, an absolute torpor has fallen upon the market, and this not in consequence of any shortness in the visible supply nor in consequence of any unusual abundance in the European harvests, but solely because other countries are underselling us in the English market Our visible supply is 15,000,000 bushels greater than it was last year at this time, 23,000,000 greater than in 1883, and 38,000,000 greater than in 1882. English requirements are even larger than last year, but we are not supplying them. India, Australia, and Russia are. This happens, too, at a time when the price of wheat is phenomenally low—31 shillings per quarter in Liverpool, 91¼ cents per bushel in New York, and 84¼ in Chicago. At 30 to 31 shillings per quarter Great Britain is getting all the wheat she wants. Her people are fed with Indian and Australian wheat as cheaply as we are supplied with that of Minnesota and Dakota. The only cereal that we are exporting in any considerable quantity is Indian corn, which at 48 cents per bushel in New York foreigners are willing to take from us in somewhat larger quantities than last year. We still have a virtual monopoly of this article, but in the supply of wheat we have distinctly fallen behind.

Formerly we commanded the markets of the world as producers of wheat, cotton, petroleum, and tobacco. These constituted three-fourths of our exports. Foreign countries could not do without them—could not do without the portion which we produced in excess of our own requirements. It appears that they can do without our wheat. It is feared that they may soon be able to do without our cotton; the potential supply from Egypt being limited only by the facilities for irrigation which can be furnished by capital, and which will certainly be furnished if England retains her hold upon that country—as there is every prospect of her doing. India also has great capabilities for cotton-growing, and has been deficient hitherto only in means of transportation. These are now being supplied, not rapidly, perhaps, but steadily. The Russian production of petroleum is increasing in spite of all the obstacles which a low stage of civilization puts in its way. The article being abundant in Russia, it is only a question of time when the facilities for producing and transporting it will be as perfect as they are in the United States. There will be pipe lines and refineries and whatever else is needed to make as good and as cheap an article as ours. Three of our four monopolies are therefore either doomed or threatened. A world-wide revolution of commerce is taking place, akin to that which followed the opening of the Suez Canal—a revolution not to our advantage. What are we going to do about it?

The first fact that strikes us is that our competitors in the production of wheat and cotton are really the only "pauper laborers" that we are ever brought into commercial contact with. The Indian ryot and the Egyptian fellah work for less pay than any other laborers in the world, except possibly the lowest classes of Chinese in their native land. No Chinaman in the United States ever works for such pitiful compensation. It follows that the American farmer and planter are competing with the cheapest labor in the world, and that there is no way to protect them. We can neither "tariff" nor mob the paupers of India and Egypt. We have got to face the fact that wheat sells in Liverpool at 31s. per quarter and cotton at 5d. per pound. There is no certainty that prices will be as high next year as they are now. The chances are that they will be lower ten years from now than they are to-day, since the facilities which have given us the advantage in the past are getting into the hands of our rivals. The gain which these countries have made by the mere introduction of law and order is very great. Nobody can compute the commercial value of justice when substituted for rapine in a semi-barbarous country, but everybody knows that it is immense. India has secured this advantage, and Egypt will secure it soon. Law and order pave the way for railroads and labor-saving machinery and capital in every form.

We have got to compete with these countries in the production of wheat and cotton. There is no getting around that fact. If they can furnish these staples cheaper than we can, they will take the market away from us. It is needless to speculate on the gold supply or to discuss the silver question as a factor in making prices. Whether the gold supply be more or less, whether silver be coined or not coined, the superiority of the Indian and Egyptian producers, if they have a superiority, remains the same. Whether wheat sells in Liverpool at $1 per bushel, or at $2, or at 50 cents, the relative positions of the rival producers are unchanged. There is no way under heaven to recover our superiority if we have lost it, or to retain it if we have not yet lost it, but to sell at lower prices. This, we are told, cannot be done because the farmers and planters are making no profit now, are hardly getting back the cost of production, and in many cases not even that. But there is one way to sell at lower prices, and that is to repeal the export duty of 30 per cent. on wheat and cotton. "But there are no export duties," says some startled farmer, or planter, or shipper; "the Constitution expressly forbids export duties." Yes; but what is the difference between paying 30 per cent. duty on what you send abroad and paying 30 per cent. on what you get in exchange? Suppose A and B are trading wheat for cloth. A gives B a bushel of wheat for a yard of cloth. Somebody intercepts the cloth and cuts off one-third of it, so that A gets only two-thirds of a yard. The result is the same to A as though one-third of a bushel of wheat had been taken from him, and his cloth had been let alone. The principle holds good as to all our exports, whether of agriculture or of manufactures, of forests or of mines. There is, as to the nation at large, an export duty averaging 30 per cent. This is the average rate of duty on all our imports, free and dutiable taken together. It is the third part taken off the pay we get for our exports, and is therefore the same thing as a third taken off the value of the exports. By abolishing the export tax we can at once add 30 per cent. to our power of competing with the foreign producers of wheat, cotton, petroleum, tobacco, and everything else.

Without meaning to alarm our high-tariff friends, we advise them to make up their minds to an early—comparatively early—repeal of all protective duties, for as soon as the American farmers and planters come to realize that the low prices of wheat and cotton that have crippled them lately are not accidental but permanent, they will demand the repeal of this 30 per cent. export duty and they will get it. When they come to understand the subject under the spur of necessity, they will not leave the smallest shred or scrap of a protective duty on any single thing in the whole tariff list. We commend the logic of events to those most interested in studying it. If the protected classes want time to prepare themselves for the change, their best chance of getting it is to take the initiative in reducing the tariff. The time is fast coming when they will not be consulted.

THE ENGLISH ELECTIONS AND THE CLERGY.

SIR WILLIAM HARCOURT has written a letter to the London *Times* on the late elections in England, in which he devotes himself more particularly to a consideration of the result in the counties, which he describes as follows:

"In thirty-two counties of England and Wales the Liberal majority prevails. I need not say that in Scotland the Liberal majority is even more overwhelming. The remarkable feature of the last election has been the great extension of area of the Liberal majority into whole provinces of the rural districts where Toryism was formerly 'monarch of all it surveyed.' Since the conversion of the Franks there has never been seen such a moral transformation as that which has come over the party aspect of the eastern, the western, the south-western, and some of the midland counties. It is at once a social and a political revolution. The influence of the peer, the squire, and the parson has vanished. The revolt from the old Tory standard has been complete and crushing. In Suffolk, which I have recently visited, where an unbroken succession of Tory county members have sat for half a century, the Liberals have won every seat.

"The seats which the Parnellites have presented to the Tory party are a temporary windfall, but the loss of their hold on the counties is a permanent disaster."

What makes this state of things the more remarkable is, that the Anglican clergy, who were supposed by some to be likely to have great influence over the country voters, have as a rule thrown themselves with great bitterness on the side of the Tories. On this point Sir William Harcourt says: "As far as I have been able to learn from those who have taken a practical part in these contests, a main cause of the Liberal success has been the unpopularity of the clergy with the agricultural laborer. This sentiment has been greatly aggravated by the imprudent zeal, not to say violence, of these reverend agitators, and that which was formerly a social dislike has grown into a political animosity." The Bishop of Chichester, writing to the *Times* on the same subject, says: "I think the result of the county poll ought to teach a lesson that the agricultural laborer resents, and justly, his virtual degradation in the Church, which is his own. . . . I suppose when it is too late we shall learn and feel the truth." He illustrates this by pointing to the manner in which in the country churches the poor are stowed away in corners by them-

selves as an inferior class. Commenting on his letter, however, the London *Spectator* doubts whether these class distinctions in the parish church have had nearly as much to do with the alienation of the laborer as the general manner of the Anglican clergy toward him, forming such a marked contrast, in its patronage and hauteur and air of social superiority, with the kindly brotherly ways of the Baptist or the Methodist, or other dissenting ministers. The general result is that, as the Bishop of Chichester says, the agricultural laborer has learned to feel that the Anglican Church is the church of the rich and not the church of the poor.

In other words, the very qualities which have in the eyes of many of the defenders of the Church Establishment made the English country clergy so valuable as a civilizing and reforming influence in country parishes, namely, the fact that they were "gentlemen," have caused their failure as pastors. Being drawn largely from the same class as the squire, or from a class that admires and imitates the squire, they shared his feelings and opinions and manners, and have thus been involved in the same political overthrow. They taught a scheme of social duty which seemed to impose on the laborer the obligation of not trying to improve his condition, and made the cultivation of respect for his "betters" a far more important matter than the cultivation of his self-respect. Their efforts to promote his material comfort, too, nearly always took the form of almsgiving, such as gifts of fuel and warm clothing, and were very apt to indicate complete hopelessness about and indifference to his ever attaining a position of independence. Almsgiving is very difficult without a great deal of inquisitive meddling with the domestic affairs of the persons relieved, and that the English laborers have long chafed under this at the hands of the parson and his wife and daughters, is well known to all who have managed to acquire their real confidence.

None, or but little, of this is true of the Anglican clergy in the cities. There they are often either alone in the midst of vice, ignorance, and destitution, as many at the east end of London, or are in charge of churches maintained wholly or in part on the voluntary principle. At all events, they rarely are able to present themselves to their flocks in the attitude of social superiors. Their relation to them is, in fact, very much that of the dissenting ministers. It is hardly necessary to point out the way in which this contrast reinforces the opponents of the Establishment. It enables them to say that, in attacking the State Church, they are not really attacking the Church as a religious institution; that in seeking to separate it from the State, they are simply seeking something which would greatly increase its efficiency, and bring it into closer relations with the mass of the people, and, above all, prevent the unseemly spectacle of a close alliance between the clergy and one political party, and their appearance on the stump as furious electioneering orators. There has been a great deal that is shocking in all this, even to devoted friends of the Church. Sir William Harcourt is the son of an Archbishop of York, and in fact may be said to belong to a very clerical family, and naturally has a great deal of affection for the Church just as it is and has been; but he sees the utter impossibility of maintaining it as a State Church, in the present state of popular feeling, if at every election the clergy are all found on the unpopular side, and outdo the Squires in the coarseness and violence of their political harangues.

The effect of the success of the Liberals in the counties on the disestablishment question will probably be considerable. The formidable proportions assumed by the Irish question have for the moment put the whole subject into the background, but when this is settled, the attack on the Establishment will be renewed with increased vigor, and the newly discovered weakness of the clergy in the counties will greatly encourage its promoters. The crisis has, however, had a sobering effect on a large number, and has produced a movement, originating in Oxford and Cambridge, for a reform in church government by the admission of laymen to a share in it, on the American plan. Hitherto they have not had the least share in the religious branch of it.

REALISM AND IDEALISM.

LONDON, December 4, 1885.

I NOTICE in the *Nation* (Nos. 1068 and 1064) a discussion on the distinction between the ideal and the real which tempts me to enter the lists, having for some time past been engaged on work the point and value of which depend on this distinction and its possible value in education; and as I am accustomed to regard the question from the plastic point of view, and your correspondents from the literary, there may be a sort of stereoscopic image obtainable from the combined vision.

Of course the first question to settle is if there be a valid distinction to base our study on. If the position of Professor Sill, that "it is unfortunate that the term 'idealism' is set over against 'realism'"—*i. e.*, that there is no antithetic relation between the real and the ideal—be well taken, we waste our ink as completely as we should in debating why a fish weighs more out of the water than in it. If the ideal is only more real than the real, it is nonsense to go further in the study of the problems of their relations.

If, however, as I believe, realism, whether in art or in literature, be radically opposed to idealism—not as degrees of truth or as truth and falsehood, but as that which becomes known to us by distinct and, in a certain way, opposed mental faculties—the distinction is not only a valid one, but one which must be recognized in any scheme of superior education. It is true, as Professor Sill says, that "the terms of criticism are used so confusedly that one needs to devote every other sentence to definition in order to discuss these matters"; and he thereupon proceeds to add to the confusion by confounding the real and the ideal. What we need is not "to devote every other sentence to definition"; rather to define first and then discuss. But as we must establish terms and facts to work from, we may say that we must have a scientific basis; and in order that this basis may be experimentally determined, we must go to that province of perception in which some approach to demonstration can be made—*i. e.*, to plastic art. And we must first define our quest. As a contribution to this end I beg to offer my own definition, which is based on the (I think) unquestionable and, so far as I know, undisputed fact that we are gifted, beyond the bodily or optical vision which takes cognizance of "real" things, and which is the basis, therefore, of all realism, with a power of mental imagery which is variously known as imagination, conception, subjective vision, invention, delusion, etc., etc., according to the way people look at it, and which is the basis of what is known as idealism. I suppose we apply the terms in this way because the impressions we receive from objects recognized by optical vision, or realistic, are considered to be demonstrably of a permanent nature, renewable from the same objects, and recognizable by all who have sound optical vision, so that they are said to be of things which really exist; while those due to the mental vision are called idealistic because the ideal is understood to be incapable of demonstration or recognition by the optics.

I will allude, only to eliminate it from the discussion, to the distinction between real and actual of the metaphysician, in the sense of permanent and transitory, because it is not in the range of art, literary or plastic, and gives to realism the entire world of things which have actually existed or exist, and of which ocular proof can be afforded, direct or indirect, or of which the authentic portraiture by pen or pencil can be obtained or given. Of things ideal we may neglect (not eliminate) those which are so called in the sense of Plato—the eternal types of things created, and therefore hypothetically the perfect spiritual forms of things, to be seen more or less approximatively in the material world, from which conception we derive our notion of the ideal of form and beauty, because to be idealistic (in the sense of antagonism to realistic) it is not necessary that an image should be perfect in its kind. The deduction of the accurate definitions of realistic and idealistic I should take to be readily made from these premises, as that which is drawn from what has been or is actually seen, and which correctly describes or depicts it; or that which is drawn from the mental vision, imagination, or conception evolved in the mind of the writer or painter. We exclude delusions, because, so far as the subject of them is concerned, they are as real as a physical fact; visions; the appearances of delirium tremens, which, whatever they may be from the physical point of view, are not of those subjective creations which can be considered to be formed or evoked voluntarily to a greater or less extent, and made the subjects of art. Certainly if an hallucination were vivid enough in the mind of a painter to be reproduced as if it were a physical reality, and, independently of the will of the painter, were to pose as a model and insist on being drawn, like some of Blake's visions, we must consider them for all art distinctions as real.

The radical difference, then, so far as the plastic arts are concerned, is that the idealist works directly from a mental image, while realistic art is that which is drawn from nature, and which, with artists who are gifted with correct and equally well-trained vision, would be always represented in the same way, any trace of distinctive individuality or qualities which are not seen by other people equally being attributable to a vein of idealism, or subjective quality. This, of course, does not apply to fantastic and artificial variations or pure conventionalisms, such as working in black and white or outline. The realistic painter has simply to study nature, and, at his very best, can simply represent her to us. The idealistic, on the contrary, works from a conception which may be more or less like nature, but is not necessarily so except from the fact that, as all our cognitions relate to things seen and experienced, it is very doubtful if we can conceive anything which is unlike, in its essential traits, something which has been known by us, in the whole or in parts. Nevertheless, this mental image is to the artist a distinct exist-

ence; he designs his picture in accordance with it, and the quality of this image is that it displays only the characteristics which are necessary to the unity of the conception—the mass of unimportant traits and non-essential details which nature study intrudes on the student being here left behind, while the important and essential qualities are emphasized, and characterize the conception. In the best art, individuality is merged with type. In Greek sculpture, the slightest tendency to individuality is avoided by purely conventional treatment of the head, and in the better epoch of Italian ideal painting and sculpture alike we do not find any study of the special individual head, although there was a certain insistance on the quality of expression which is absent in the Greek sculpture of the best epoch. Giotto, for instance, is as free from any tendency to expression of transitory emotion as was a Greek sculptor of 450 B. C. Expression as a quality of art came in with the use of portraiture, and when art had become naturalistic to a certain extent, though not yet realistic. This will serve to explain why all painters of the ideal are obliged to avoid contemporary themes, as those in which the want of realism will revolt the general sense, and why the attempt to reproduce modern history in antique costume became ridiculous: there was no liberty of treatment in purely historical themes, which contemporary events always are.

The application of the analogy to literature is easy. The writer who in his delineation does but note and record the external behavior and appearance of the dramatis personæ, who studies character from nature, must work with contemporary subjects and must follow realistic methods; and such the modern form of fiction is, almost without exception, like the modern form of the plastic arts—and the more complete the realization and in a certain sense the more deceptive, the better is the art. But the ideal treatment is marred by too much detail, or by any detail which is not vital to the type. Shakspere, though hampered with the conditions of the stage, which make a certain kind of illusion necessary, gives us no details of his noblest types except significant acts; but Shakspere himself would not have treated John Brown as he has treated *Hamlet*, because we should know how John Brown looked and what he wore; but *Hamlet*, being his own creation, he presents in his own terms.

I am obliged again to turn to painting for the most complete illustration of the broad and trenchant distinction between the real and the ideal, not because literature will not give one, but because the terms of any comparison are, in the plastic arts, definitely and visibly stated, while those in literature are not so unmistakably to be referred to their place. The pictures of our eminent landscape painter, F. E. Church, are among the most remarkable examples of a realism dependent on a vivid memory, and enabled by this memory to reproduce scenes actually seen with a completeness very nearly approaching photographic accuracy—so that one may say that it might claim to fall under my definition of the ideal; but it is purely realistic, in spite of an eminently graceful sense of composition, as is shown by the unvarying reference of all the detail to the naturalistic standard. When most perfect it is most like an actual bit of nature, and, in his celebrated "Niagara," almost illusive. Turner's work is the crowning example of the pure idealism fed by constant study of nature, but projecting its images after fusion and recombination in a form which permits no mistaking it for a reproduction of nature. Detail there is, in a minuteness as elaborate as that of Church's, but never for illusive or for naturalistic purposes, but from love of modulation and composition.

I suppose that in the production of the two classes of work, the close observation needed for knowledge of art material being a constant quantity, the essential difference is that realism depends on memory, and idealism on imagination; one is substantially record and the other creation. But nothing is further from the truth than what Professor Sill says, that "all the best fiction and the best art of any sort is realistic." It is not true of any form of art, and though in literature it is not so easy to distinguish, I believe there are few cases in which the difference is not easily seen by any one who has intelligently studied the ideal. There are undoubtedly cases in which the two are mixed; but these are imperfect examples of either, and I think I can sustain by the most authoritative examples the counter proposition to that of Professor Sill, viz., that the more purely ideal a work of art is, the less it resembles Nature. Music is a pure form of art. What relation has the real to it? Yet no definition of art is admissible which does not apply to all its forms. W. J. Stillman.

ENGLAND: CAUSES THAT DETERMINED THE LATE ELECTIONS.

London, December 14.

The general election is now over, except as regards two Scotch seats, one likely to fall to a Liberal, the other to a Tory; and it has resulted, as you know already, in leaving the Liberals much stronger than the Tories (majority of eighty-two), but scarcely equal to Tories and Parnellites combined, who have a majority of four over the Liberals. This is a strange, a difficult, an unprecedented state of things, because the existence of a third party, equally hostile to the two great old British parties, is itself a new fact in our politics. But before inquiring how it will determine the future, it is worth while to examine the causes that have produced it, giving neither of those British parties the victory it had expected.

The broad feature of the election is, as regards England, that the strength of the Tory party has been transferred from the counties to the boroughs, that of the Liberal party from the boroughs to the counties. The Liberal party expected, when the contest began, to hold its own in the boroughs, where it had a substantial majority, and to improve its position in the counties; the Tory party (which, however, was much less sanguine) to retain the counties, or most of them, and to capture many seats in the boroughs. Each has succeeded in attack, each has failed in defence. How are these phenomena to be explained? Every one here is trying to explain them, and of course many erroneous and even absurd reasons are put forward.

The Liberals account for their borough losses (which leave them in a minority not alarming in itself, but serious when compared with the majority they previously enjoyed), mainly by pointing to the Irish vote cast against them everywhere in Great Britain, under the orders of Mr. Parnell. One of his lieutenants, Mr. T. P. O'Connor, claims that this vote turned the scale in forty-six constituencies—an estimate which the Liberals do not wholly reject, because it excuses their defeat, but which appears ridiculous to any one who knows either London or Lancashire, the districts where Irishmen do not abound. Twenty-five seats is the greatest number (including Scotch as well as English boroughs and counties) in which the Parnellite vote was a decisive factor. That is a considerable allowance, for it means fifty votes on a division; but it does not explain the defeat of Liberal candidates in many places which the Liberals held in the last Parliament, though it has shown how formidable is the power which the Irish population wields when it is thoroughly united, the priests working, as on this occasion they did, side by side with the Nationalist leaders. Next to this adverse influence, the Liberals place that of the clergy of the Established Church, who certainly exerted themselves heartily, being alarmed not only by the talk about disestablishment, but by the nearer prospect of an attack on denominational schools. Their action, however, has been usually on the Tory side, and was as strongly so in 1868, when Mr. Gladstone carried the boroughs by a great majority, as it has been now. It is further alleged that the doctrine of what is called fair trade—*i.e.*, the suggestion that hostile tariffs ought to be imposed by England against imports from those countries which have high protective duties against her exports—affected the manufacturing towns, disposing them to believe that a Tory Government might find therein a remedy for the depression from which our industries have been suffering. The liquor interest is also declared to have worked hard against the Liberals, but it has always done so of late years, and when the energetic canvassing of Tory organizations, and especially of the Church of England district visitors (ladies) and of the ladies of the Primrose League, is credited with a further share in the result, it must be remembered that this is only another way of admitting that the Tories had been roused to unusual exertions, and had drawn into their service a feminine contingent which would not have labored for them had not some novel excitement stirred it up.

He who considers the facts dispassionately will hold that, while the Irish vote contributed largely to the transference of boroughs from Liberals to Tories, there were other causes at work, which the Liberals are less willing to admit. One of these was the widespread disgust at the management of some of our great departments, especially the colonies and the Foreign Office. Misfortunes in South Africa, endless vexations in Egypt, disasters in the Sudan, the idea that even in Australia questions had not been promptly or skilfully handled, had told on the mind of the mercantile community. In Manchester, for instance, which returned two Liberals and one Tory in the last Parliament, and now returns five Tories to one Liberal, this sentiment had much power, and spread from the merchants and manufacturers down into the citizen class. There was a general sense of disappointment with the non-fulfilment of the expectations formed in 1880, when Liberals had looked for a sort of millennium to begin after Lord Beaconsfield's expulsion from power; and however unjust it may be to charge the depression of trade and manufactures on a Ministry, considering the world-embracing causes which now determine the commercial prosperity of a nation, the mere fact that business had been bad under a Liberal Government disposed many people to vote against them, as bad harvests had injured the Tory Ministry in 1880. How far indignation at the fate of General Gordon operated, it is hard to determine; probably it told much less than the Tories expected. More effect must be ascribed to the alarm produced among sound but cautious Liberals by the language which some of the Radical leaders had used in recommending their programme. Even those who found little to condemn in the programme itself—those who approved of making elementary education everywhere gratuitous, and who thought the laborers' allotment scheme deserved a trial—seem to have been disquieted or disgruntled by the tone in which, the arguments by which, these proposals were advocated. They thought things were going altogether too fast, and that the time when 2,000,000 of new and inexperienced voters were being admitted to the suffrage was just the time when they ought to put on the drag by refusing their support to Radical candidates. Even

among the working classes this feeling, to which I remember to have called your attention two months ago, appears to have exerted some influence. Anything approaching to Socialism has its terrors for the smallest property-owner, and this contest was the first during which Socialist candidates came forward, the first in which semi-Socialistic doctrines were supposed, however erroneously, to have received some kind of encouragement from responsible statesmen.

While these causes operated to detach many timid Liberals, and to make others comparatively indifferent, there was also a want of a sufficiently exciting positive programme to rouse all sorts of Liberals into zealous energy. The creation of a system of popular and representative local government in the counties is one of our most pressing problems. But the Tories did not oppose it; in fact, they accepted it, and it has no vivid interest for the borough voter. It was the same with the reform of Parliamentary procedure; while even land-law reform was not rejected by the Tories, and therefore did not seem to become a party issue. To supply the defects in their authorized programme, some Liberals dwelt on gratuitous education, but they seem to have lost as much by rousing the hostility of the clergy and those whom these influence, as they gained with the masses, who complain of the hardships of the present system. Others fell back on the name of Mr. Gladstone. It is still the best name to conjure with, although Mr. Chamberlain's had become no less attractive to the Radicals. But the feeling that Mr. Gladstone's political career cannot last much longer has made people expect less from him, though they honor him no less than before, while the accentuated differences between his lieutenants, Lord Hartington and Mr. Goschen on the one side, Mr. Chamberlain and Sir Charles Dilke on the other, destroyed that sense of pride in the strength and unity of the party which so greatly contributed to its victory in 1880. There had been in that year what you call a tidal wave, there was nothing now to create a similar wave, so the permanent forces of conservatism, always strong in England, developed themselves in a normal way among the borough voters.

Now to come to the counties. Here the constituencies had been enormously enlarged by the franchise act, and the new voters swamped the old ones. It is not hard to see why the new voters went so largely for the Liberals. The Tories account for it by complaining of the wild and delusive promises made by Liberal orators to agricultural laborers. They insist on the ignorance and stupidity of this class, and the phrase "three acres and a cow" has become proverbial to express the sort of inducement which the Radical demagogue addresses to a gaping crowd, and which it accepts in simple faith.

There is much misconception and some misrepresentation in this account of the matter. In the first place, the Liberal triumphs in the counties have been largely won in the mining and manufacturing districts, among a population fully as intelligent as that of the towns. Durham and Northumberland, the coal and woollen districts of Yorkshire, the iron districts of Staffordshire, Cornwall, have all gone for the Liberals; even in Lancashire the county divisions were more favorable to them than were the boroughs, partly, no doubt, because the Irish population is chiefly congregated in the latter. Then, further, the agricultural laborer himself is by no means the stupid and gullible creature supposed by this explanation. Ignorant of general politics he certainly is, for he is only beginning to read the newspapers, but he is shrewd enough in his slow stolid way, and quite as capable of seeing through a mere demagogue as his brother in the towns. In the present instance he seems to have been governed firstly by the notion that as the Liberals had been the means of giving him the franchise, they were more likely than the Tories to help him to use it for his own benefit; secondly, by resentment against the farmer, his employer, and a disposition to vote against the farmer's party, which is, of course, the Tory party. He has doubtless expected to get something for himself as the result of his new political power, but when the "three acres and a cow" were referred to, as they often were, he received the phrase with laughter, so that latterly it was the Liberals who found it worth while to produce it for the sake of making the rustic see what a fool, as they put it, the Tories deemed him. The laborers would probably have gone Liberal nearly everywhere but for the timidity which in many districts kept them from going to the poll against the candidates favored by the squires, the farmers, and the clergy. They turned out most numerously and voted most heartily in those parts where the Agricultural Laborers' Union had given them some organization and emboldened them to face the farmers; as, for instance, in the eastern counties, or where the dissenting churches abound, as in parts of the West, because the rural dissenter is generally, and the dissenting clergyman almost always, a Liberal. Thus the successes of the Liberals in the counties are easily explicable, but by reasons which do not show that they can expect the like at another election.

Two motives from which both parties expected much seem to have told very little on the minds of the voters. One was the desire to have a strong government, that is to say, a large Parliamentary majority one way or the other, in order to cope with the Parnellite party. Perhaps the country has not yet realized the gravity of the situation as respects Ireland—little was certainly said to the electors on the subject. Anyhow it was plain to one who attended meetings at which this argument was trotted out, that it did not impress the audience. Men voted either according to their general political tendencies or according to their predilections for a particular candidate, not in order to strengthen, for the general good of the country, a party which they disapproved of. The other was the disposition to be on the winning side, which is often so strong in large communities, and is said to count for as much in your elections as it did in those of Rome. When the first two days' contests in the boroughs went in favor of the Tories, it was supposed that Liberals in the subsequently voting constituencies would be discouraged, and that doubtful men would desert them. This does not seem to have happened. The Tories were no doubt stimulated to further efforts by their successes, but the counties, according to all accounts, voted nearly as well for the Liberals as they would have done had victory smiled on the Liberals from the first. This may be partly due to the fact that the rustics did not fully realize what had happened in the boroughs; but it is remarkable anyhow.

On the whole, the results of the election are not discouraging to those who, looking to the future welfare of England, endeavor to overcome their party disappointments. The county voters have shown much interest in their newly acquired civic rights. They have come largely to meetings, have listened intelligently, have voted with as much independence as could be expected. The country as a whole is for progress, but it fears a too rapid pace. It is unwilling to be hurried, and its preference for the party which was in power from 1880 till 1885 does not prevent it from recognizing the mistakes which that party has made. The old conditions of our political life have not been substantially changed by the franchise and redistribution. It is nevertheless true, and this must never be forgotten, that the effects of such large measures are seldom seen at first, and may be more strongly marked in subsequent elections.

Correspondence.

THE IRREPRESSIBLE CONFLICT.

To the Editor of The Nation:

Sir: Events crowd upon each other so rapidly that I desire now to touch briefly upon two topics:

1. The House Rules. Probably most persons who are looking forward to the treatment by Congress of great questions like the tariff, silver, etc., regard its action as to the rules as a mere question of the modes of doing business. Yet it may well be said that no vote this winter will have more important effects upon the future of the Government, or turn upon deeper principles of political science. The rules have grown up from a necessary struggle to bring some order out of complete chaos. Their effect has been to give almost despotic control over the course of business to the Committee on Appropriations and through them to their Chairman—a curious instance, like that of the Speaker, of the way in which, with all our desperate efforts to avoid one-man power, we slide into it. But the principal remedy adopted is worse than the disease. For any good management of finance, whether private or public, the first requisite is that it should be treated as a whole—that is, expenditure and revenue being taken together. It was a fatal departure from this principle that the Ways and Means was separated from the Appropriations Committee, the result being that, with such items as pensions and rivers and harbors, expenditure is rapidly overtaking even our enormous revenue, and destroying the hope of reform in the method of raising the latter. A number of committees, each claiming a separate appropriation, will be bitterly jealous of each other, and each aim to secure the largest possible share; while to avoid internecine war, they will at once begin trading for mutual support. All proportion to revenue will soon disappear, and the control of our finances be completely lost. Some speakers in the debate expressed indignation at distrust of the discretion and economy of the committees, but the system will certainly produce the result, no matter how the committees are made up.

This is bad enough, but there is another consequence at which the civil-service reformers should cry out as one man. If each committee can at pleasure raise or lower the appropriation for its department (and they will get this power by combining together), the department will soon become a mere tool for the political purposes of the committee. It happens that we are not left to theory on this point, as experience has abundantly justified it. The finances of the city of Boston have been conducted precisely on this plan, and, not to speak of the resultant extravagance, one effect has been that tickets for employment have been distributed among members of the Council, and by them actually *sold* to laborers, who upon presenting them were entitled to employment, no matter what the quality of their labor. How would civil-service reformers like a state of things like that?

Certainly the despotism of the Chairman of the Committee on Appropriations should be put an end to, but the true remedy lies in exactly the opposite direction. Both revenue and expenditure of the national finances should be placed in the hands of one authority directly responsible to the nation, and that authority can only be the Secretary of the Treasury. The chairman of a committee is the representative of a local district, and responsible directly only to his constituents, though indirectly he is under strict re-

sponsibility to the private interests which, through the Speaker, have placed him where he is. But the Secretary of the Treasury is, through the President, the direct agent of the whole nation. If at the outset he had only an advisory share in debate, his criticisms would have a weight beyond that of any member or committee; and however reluctant he might be, he would be forced to make them by the prodding of independent members, and even of his party opponents. But, sooner or later, through him would be worked out some method of relief from deadlock other than that which has been adopted and promises to entail still worse evils.

2. The fierce attack by Senator Beck upon the Secretary of the Treasury comes like a bolt out of the blue. The country may well be astounded that a leading Senator should make such an assault upon an Administration nominally at least of his own party, and that not a single Democratic voice should be raised in its defence, while the Republicans manifested only contemptuous indifference. Yet this is the perfectly natural outcome of the events of the last six months. Those who, with the strongest sympathy with civil-service reform, have distrusted the methods adopted, have argued that in the absence of any real dividing line between the two great parties, the spoils of office form their only reason of existence, and that if the President should disappoint the Democrats after their long term of exclusion, they would turn against him even more violently than the Republicans. This first gun shows plainly enough that the President has no support of any kind to expect from Congress. The glove has been fairly thrown down, and it remains for the Executive either to take it up or to submit in silence to every kind of bullying and hostile intrigue. The contest has passed beyond the stage of Republicans and Democrats, and has reached that of the Executive and the Legislature. The only means of defence, according to existing methods, open to the Secretary of the Treasury against a charge which may be briefly and forcibly summed up in the word "thief," are either a resort to the newspapers, or to plead his excuses, like a school-boy, before a committee in a back room. They are equally beneath the dignity and independence of the executive branch of the Government, and he should categorically decline both. The manly way would be to demand that his reply should be heard in the same public arena in which the charge was made. Certainly it requires courage, but the safest way is to take the bull by the horns, and if it is done in a proper spirit it will be surprising if it does not meet a burst of applause from the country which will cow even Senatorial arrogance. In the history of our politics no finer opportunity has been offered to a public man to make a name for himself, and do a lasting service to the country. G. B.

Boston, December 25, 1885.

THE PRICE OF A PROTECTED INDUSTRY.

To the Editor of The Nation:

Sir: I was pleased to see you call attention (in No. 1068) to the recent advance in the price of steel rails of $8 a ton. The tribute levied by the steel-rail monopoly is the heaviest burden which the protective tariff has saddled upon a long-suffering public. It is difficult to account for the apparent indifference of the public to the extortion practised by these men under our laws. The only reason which presents itself to my mind why the people should meekly allow one of the largest interests we have (railroads) to be systematically plundered in the matter of one of the most important items in railroad construction, viz., steel rails, without vigorous protest, is, that the general public are grossly ignorant of the extent to which our railroads have been mulcted by the Bessemer steel manufacturers.

The following table will show in round numbers the effect of the protective tax on the price of steel rails. In computing the extra cost to our people by reason of the tariff, I have deducted from the difference in price $4 a ton, which would certainly cover the cost of transportation from England to the United States—that is, it would have cost us $4 a ton above the English price for freight if we had bought all our rails in England, if there were no tariff. The amounts of production and price in this country and the price in England are taken from Taussig's 'History of the Present Tariff,' except that I have taken the product in net tons of 2,000 pounds and reduced it to gross tons of 2,240 pounds, so that the basis of each computation may be the same. Taussig says, "The figures of production are from the reports of the American Iron and Steel Association, as are also the prices in this country; the prices in England have been compiled from the files of the London *Economist*, checked by occasional tables in the Iron and Steel Association's reports." So it will be seen they are reliable.

Year.	Product in United States, Gross Tons.	Average Price in United States, Gross Tons.	Average Price in England, Gross Tons.	Average Difference in Price.	What Protection has Cost us in Thousands of Dollars.
1871	34,150	$91.70	$57.70	$34.00	$924
1872	83,900	99.70	67.30	32.40	1,892
1873	115,260	95.90	74.40	21.50	2,016
1874	129,400	84.70	57.50	27.20	3,002
1875	259,800	59.70	44.10	15.60	3,014
1876	367,400	53.10	37.70	15.40	4,188
1877	385,500	43.50	31.90	11.60	2,029
1878	491,000	41.70	27.20	14.50	5,155
1879	610,700	48.20	24.70	23.50	11,908
1880	851,700	67.50	36.00	31.50	23,321
1881	1,187,000	61.10	31.20	29 90	30,743
1882	1,281,000	48.50	30.00	18.50	18,574
1883	1,148,000	37.75	25.40	12.35	9,605
Total cost to people of protection to steel rails in thirteen years					$117,271,000

The above table is a statement of facts. It does not represent any imaginary figures drawn from the realms of speculation by a "college professor, theorist, or doctrinaire." There is no escaping the result. One hundred and seventeen million dollars the people of this country have paid for protection in the matter of steel rails alone in thirteen years. This is entirely outside of the amount paid the Government for duties on imported steel rails.

It would seem as if the Bessemer steel manufacturers were amply protected by their patent process and the thousands of miles of distance which separates them from their foreign competitors. I believe they are, and that, if left to their own energy and resources, they can take care of themselves, without the legal license of the tax-gatherer to compel their fellow-citizens to pay them an average tribute of nine millions a year. Perhaps the steel industry is not now so profitable as it has been. If that is true, the reason is plain: such enormous profits as they were allowed to make during the era of activity in railroad construction, could not but induce overproduction and consequent depression. I care not how that is; it is sufficient for me that we should have been $117,000,000 better off if not a steel rail had ever been manufactured here, and that the establishment of the industry, instead of being a great benefit, should be regarded as a public calamity and a curse.

M. H. Ford.

Grand Rapids, Mich., December 19, 1885.

THE TAXATION OF RAILROAD LANDS.

To the Editor of The Nation:

Sir: Does not the recent decision of the Supreme Court as to the validity of taxing Northern Pacific lands point strongly to the very questionable wisdom of subsidizing railroads by land grants? The grounds on which the decision rests are so evident that the wonder is that the question has so long been allowed to remain undecided, affecting as it does so largely the prosperity of the counties along the Northern Pacific Railroad. Of the evils of the land-grant system we who live within what is known as the "forty-mile limit" are far more sensitive than mere observers East. They seem to meet us at every turn.

This decision raises no end of complications. Those counties that have levied taxes on railroad lands for the last six or eight years will be obliged to refund the same, together with interest from date of purchase, to parties holding tax-bills. If title to railroad lands still vests in the Government where no patent has been taken out by the railroad, then purchasers from the railroad hold no title, and are entitled to have taxes paid refunded; nor are they obliged to pay taxes in future on such lands until they hold title to the same. In other words, the counties will have to repay three-quarters of all taxes that have been raised, while the amount of assessable property will be reduced more than two-thirds, if Congress fails to take action in the matter. The holders of railroad land, the speculators, will be benefited; and those few of the actual settlers who have taken out title on Government land will be most oppressed. That very class that has been the greatest drawback to the development of the region will benefit at the expense of bona-fide settlers.

Further, in refunding these taxes the counties would be obliged to incur a heavy bonded debt that would militate much against the immigration of settlers and capital.

We may thank the land-grant system that much of our most desirable land is as yet altogether unimproved. We trust that the land-grant system, seconded by the short-sighted policy of the railroad, may not give the development of one of the finest sections of the territory a setback from which it will take years to recover.

Jamestown, Dak., December 18, 1885.

WILD FLOWERS OF COLORADO.

To the Editor of The Nation:

Sir: Will you allow me room in your columns to make a few statements relative to Mrs. Thayer's 'Wild Flowers of Colorado,' and the letter of her publishers, Cassell & Co., Limited, which appeared in your issue of December 17?

I have in my collection of Colorado wild flowers a study of the anemone or wind flower, almost exactly like the study in Mrs. Thayer's book, which she claims as original, and which Kate Ball McClure claims to have seen her paint from nature. Mrs. Thayer has an additional blossom placed in the upper part of her study; cover that, and the study is practically exactly like mine, line for line and curve for curve. I painted mine in Colorado Springs, Col., in 1882, from a study I borrowed of Miss Alice A. Stewart. This has always been a favorite study with Miss Stewart's pupils and friends, and has been copied so many times that there must be a great many in existence. I know of two besides my own within twenty miles of Boston. I also have a study of the prickly poppy, painted from Miss Stewart's, and Mrs. Thayer's certainly bears unmistakable evidence of having been painted from Miss Stewart's design. I have, too, a study of the

evening primrose, copied from Miss Stewart's, which differs only a little in arrangement from Mrs. Thayer's.

It is very remarkable that I should have three of these studies, painted in 1882 and 1883 from Miss Stewart's original studies, so very like Mrs. Thayer's, painted some time later, *if hers are original*. Mrs. Thayer, Kate Ball McClure, and others go too far when they claim *all* the studies as original and from nature. There are three other studies—tree cactus, mariposa lily, and man-of-the-earth—which I recognized as Miss Stewart's designs.

I also have painted the flowers of Colorado "for years," from nature as well as from Miss Stewart's studies, and have given special attention to their botany; and I must decidedly differ from Kate Ball McClure's opinion that Mrs. Thayer's flowers are faithful representations, "correctly drawn," and "perfect pictures of the wild flowers of the State." Many of the flowers in the book are out of drawing and poorly painted, and some are botanically incorrect. Any fairly good and unprejudiced artist will bear witness to the former, and "Gray" and "Coulter" and the natural flowers are my authorities for the latter, statement.

Mrs. Thayer says the trip was taken "in the autumn of 1884." How could Kate Ball McClure and another companion, mentioned in your note, have seen Mrs. Thayer paint the anemone, an early spring flower, from *nature on this trip*? They seem to assert as much, although Mrs. Thayer implies that the anemones and others were not painted at that time. They do not all agree in their statements.

The claims of Miss Stewart and those who know her work are not false, for there is indisputable evidence that some of the studies in this book are not original, but copies from hers.

Yours respectfully,

SUSAN T. DUNBAR.

72 WALTHAM ST., BOSTON, MASS., December 22, 1885.

DEATH-RATE OF FOREIGN AND NATIVE-BORN FROM CONSUMPTION.

TO THE EDITOR OF THE NATION:

SIR: I think it is important to learn, if possible, whether the Irish in this country are more subject to death from consumption than are the native-born citizens. The statistics given by Doctor Shattuck in No. 1068 of the *Nation* seem at first sight to show conclusively that they are; yet his statistics are not conclusive, because the foreign-born inhabitants of this country are, on the average, considerably older than the native-born inhabitants, and the death-rate from consumption increases rapidly with age after the age of fifty. If Doctor Shattuck can give us, for the native and foreign-born inhabitants, statistics of the proportion of deaths from consumption to inhabitants at ages definitely stated, he will enable us to judge correctly whether one race is, in this country, more subject than the other to death from consumption. That consumption is most fatal at the older ages is, I think, now well established. One of the earliest, if not the earliest, demonstrations of this truth may be found on pages 314, 315 and the intervening diagram in 'Vital Statistics of Michigan for 1870,' a copy of which I send you by this mail. The differences between the death rates, native and foreign, stated by Doctor Shattuck, seem to be no greater than would be expected between two classes of persons the average age of one of which is much greater than that of the other. The average age of the foreign-born inhabitants is much greater than that of the native-born, partly because, as Doctor Shattuck correctly states, the children of the foreign-born are included with those of the native-born inhabitants.—Very respectfully, HENRY B. BAKER.

LANSING, MICH., December 21, 1885.

PROHIBITION AND HIGH LICENSE.

TO THE EDITOR OF THE NATION:

SIR: Apropos of your editorial in the *Nation* of the 24th inst. concerning the failure of prohibition in Iowa, permit me to refer to a statement copied in the New York *Times* of the 26th from the Cleveland *Plain Dealer*, to the effect that high license has decreased the number of saloons in Chicago from 13,000 to 9,000, and added nearly $1,300,000 to the revenues of that city. As the violent opponents of high license appear to be more and more confined to domestic cranks and foreign rumsellers, would it not be a good plan to let the moderate men try their way for a while—at least in the large cities?

I am not well informed on the state of the law here, but I am told that the Pennsylvania Legislature, while restraining our City Councils from making use of the high-license tax, steadily refuses to do so itself, preferring noisy talk about prohibition, local option, and so forth, to any really beneficial action.

Clearly there remains for the "Mugwumps" much to be done on many subjects.

Very respectfully, I. J. W.

PHILADELPHIA, December 26, 1885.

Notes.

AN 'Historical Biography of Prince Bismarck,' by Charles Lowe, with a preface by Prof. Munroe Smith, of Columbia College, will be published immediately by Cassell & Co.

Holt's "Leisure Hour Series" is about to be enlarged by a romantic and dramatic novel of English rural life, with an American hero, and the title, 'After His Kind.' The author is supposed to be "John Coventry."

The Appletons have given us 'Charles Darwin,' by Grant Allen, a volume of the English Worthies Series. We are not admirers of this author's very popular quasi-scientific writings; but this little book makes a favorable impression. The subject would naturally invite to accuracy and sobriety of statement, while it falls in very well with picturesque narrative. The only slip we notice is one in which, while referring to anticipations of Darwinian ideas, the author assigns Haldeman to a professorial chair at Boston.

What the American Unitarian Association has done for Channing in popularizing his life and writings by cheap editions, it has now begun to do for Theodore Parker, offering a selection from his ethical and theological discourses, under the title 'Views of Religion.' Those who remember or have read of Parker's treatment at the hands of his own denomination, need not be told how significant this is. As Dr. James Freeman Clarke, who furnishes an introduction, points out, the progress of religious thought among the Unitarians has left Parker among the conservatives—among the "defenders," as he himself rated Dr. Channing, in that discriminating obituary sermon on him which, on account of its rarity, gives especial value to the present volume. Pending a complete American edition of Parker's works, these nineteen examples will find favor with many. Nothing has been borrowed from his sermons on slavery.

Our Paris correspondent some weeks ago gave an interesting account in these columns of Count Leo Tolstoi's remarkable profession of faith, 'My Religion.' This work has now been translated from the French by Huntington Smith, and published by T. Y. Crowell & Co., New York. Mr. Smith also furnishes a preface and a brief appendix. It is unnecessary to review this work afresh, but it is a singular coincidence that it is made accessible in English in the same year with the appearance of the life of the founder of the Non-Resistant sect in this country.

A pleasant book comes from Portland, 'The Triangular Society' (Hoyt, Fogg & Donham). It is mainly of local interest as to scenes and allusions, but all the world might be the better for such sketches of quiet people, cheerily, bravely making the most and the happiest of an every-day life. Some verses already in print, but likely to be lost in the big volumes of periodicals, find fitting niches. Best of all is "Fessenden's Garden," a pathetic remembrance of the private life of Maine's ablest Senator.

Some record of the early stages of infancy, even if it be but sentimental, has its value. Darwin has shown us what it may teach psychologically. In Professor Fonssagrives's scientific tabulations, we have the physical and medical possibilities. A little of both is contemplated in 'Baby's Record' (Robert Clarke & Co.). Nearly half the blank leaves are assigned to "Baby Wit and Wisdom."

For the thirty-fifth time P. Blakiston, Son & Co., Philadelphia, issue their convenient 'Physician's Visiting List.'

There should be no question of the utility of the practical little work, 'Three Hundred Decorative and Fancy Articles for Presents, Fairs, etc.,' by Lucretia P. Hale and Margaret E. White (Boston: S. W. Tilton & Co.). It not only shows, with the aid of illustrations, how to make the articles in question, but gives directions about getting up fairs and about various kinds of social festivities. Though timely for the holidays, it will be found suggestive and serviceable at all seasons.

"The Sleeping Car," "The Register," "The Elevator," and now "The Garroters" (Harper & Bros.) attest the growth of what the French would call Mr. W. D. Howells's "Théâtre."

We are glad to learn from the Messrs. Harper that Mr. Charles Nordhoff's little work, 'Politics for Young Americans,' which is now used (in Spanish) as a school manual in Mexico, is being adapted also for Venezuela.

When Mr. Frederick Saunders's amusing little books were originally published anonymously, 'Salad for the Solitary,' in 1853, and 'Salad for the Social,' in 1860, it was asserted in England that they were written by Dr. Doran; but now that they have been revised and republished with the author's name, it is a little odd to find them figuring in an alleged "complete series of Dr. Doran's works, as published," in a recent second-hand catalogue of the Messrs. Putnam.

M. Hetzel has followed his 'Quatres filles du Dr. Marsch' and 'Jack et Jane' by a French adaptation of another of Miss Alcott's stories, 'La Petite Rose, ses six tantes et ses sept cousins': it is announced as by "P. J. Stahl" (*i. e.*, M. Hetzel himself and a M. Lermont). In the same series appear nearly a score of Mayne Reid's tales, Mrs. Dodge's 'Patins d'Argent,' Mme. Th. Bentzon's version of Mr. Aldrich's 'Un Écolier Américam' and Mr. Robert Louis Stevenson's 'Île au Trésor.' In the *Magasin Illustré d'Éducation et de Récréation* which M. "Stahl," M. Jules Verne, and M. Jean Macé edit together, M. Jules Verne has begun a new serial, "Un Billet de Loterie."

President Cleveland forms one of the four regulation portrait plates in the *Almanach de Gotha* for 1886 (B. Westermann & Co.), and the incoming of his Administration is justly remarked in the preface as one of the most significant political changes of the past year. Another plate shows in one frame the three founders of the Congo State, viz., King Leopold, Bismarck, and

Stanley; and this artificial creation, like unto nothing else in modern history, enters for the first time the family of nations recognized by the *Almanach*. It does not requ re much room—little more than a single page; yet it has a central government at Brussels, with three departments, including one of foreign affairs, and a government on the Congo, with a "public force" of 2,000 blacks, and a "marine" of nine steamboats and launches. It even has a diplomatic corps, but the United States is alone represented by an agent, Mr Tisdel, whose forthcoming work on the Congo State we announced last week. Germany for the first time has its bantling colonies displayed as a part of its possessions in Africa—Cameroon, Togo, Angra Pequena; the first requiring a governor and a chancellor, the last two a simple commissary. Its protectorate covers also Emperor William's Land on the northeast coast of New Guinea, and the adjacent Bismarck Archipelago. The genealogical division of this punctilious work has undergone a change by which families in the line of royal and princely succession are set apart from those derived from unequal marriages.

The antiquarian feature of the *Magazine of American History* for January, 1886, is a paper by E. H. Goss on Paul Revere; the historical paper of most moment is that by General Baldy Smith on the operations before Fort Donelson, with special reference to the part taken by Gen. C. F. Smith, which is the same as saying, however, that a new view is offered of the causes of the success of those operations.

The bound volume of this magazine for the current year has an unwonted civil-war complexion, which would have been better brought out by an analytic table of contents. Two reflections occur to us on turning over its pages—that we have here rather a receptacle than an organ of historical studies; and that the book-notices proper to the magazine derive no value from appearing in it.

The first of a series of historical maps to be edited by Edward Channing, Instructor in History at Harvard College, will be an outline map of the United States in four sections, drawn under the direction of Mr. Albert B. Hart, Instructor in American History at the same institution. D. C. Heath & Co., Boston, are the publishers.

One need not be a librarian to read with profit and occasionally with zest the double number of the *Library Journal*, which reports at length the Lake George conference of librarians in the fall. Among the regular yearly reports we remark as of general interest one on the reading of the young.

A conference has recently been held in Aarau to take measures for establishing a uniform German orthography for Switzerland. Ten Cantons were represented, as well as the associations of printers and booksellers. A proposition to adopt the Prussian-Bavarian orthography was voted down by a large majority, and it was finally determined to petition the Federal Council to call a conference of delegates from all the German States for the purpose of obtaining a uniform and simplified orthography. In this connection the discussion as to the changes in the use of the French and German languages in Switzerland is interesting. According to the census of 1860, the French numbered 23.6 in every 100 inhabitants, the Germans 69 in the 100. In 1880 this proportion had changed to 21 for the French against 71.4 in the 100 for the Germans. M. Knapp, of Neufchâtel, however, protests that this diminution is more apparent than real. He asserts that in Freiburg, for instance, where at the beginning of the century German was the official language, it is now proposed to close the German schools for want of scholars, and that the German emigrants into the French Cantons, as Neufchâtel, gradually lose the use of their mother tongue. He adds that the census returns are not entirely trustworthy from the different methods employed in the various Cantons, and that in place of the question "Mother tongue" in the tables, there should have been "Language habitually used."

The bi-centennial anniversary of the revocation of the Edict of Nantes, by Louis XIV., in October, 1685, was here and there observed as a day of pious recollection by descendants of the victims of that King's blind intolerance. What a blow that reversal of Henry IV.'s great act of statesmanship inflicted on the prosperity and political development of France, is now as well understood by the French—excepting some ultra-Catholics, blinded both by religious and political fanaticism—as it is, for instance, in Germany, to whose wealth, industry, and love of freedom, the banished Huguenots added so largely. In the château where the "grand monarque" decreed the expulsions which drove so much French ability and energy into the dominions of the Great Elector of Brandenburg, a descendant of the latter was proclaimed, in 1871, Emperor of reunited Germany. German writers have not missed the opportunity to treat the subject in journals and reviews, and a serious historical monograph on it, 'Die Aufhebung des Edicts von Nantes, im October, 1685' (Halle, 1885), from the pen of Prof. Dr. Th. Schott, has been issued by the Verein für Reformationsgeschichte.

Wilhelm Heine, the traveller, who was born in 1827, died in Dresden, his native city, in the early part of October. He learned landscape and architectural painting in Paris, and was active as a painter at the Dresden Court Theatre, but after the revolutionary movement in Saxony in 1849 he came to this country. In 1851 he travelled in Central America, which he described in 'Wanderbilder aus Centralamerika' (Leipzig, 1853). He subsequently joined Commodore Perry's expedition to Japan, and, in 1860, the Prussian expedition to the same country, to the description of which he devoted a number of books, including the superb pictorial work, 'Japan; Beiträge zur Kenntniss des Landes und seiner Bewohner' (Dresden, 1870 *et seq*). After the outbreak of the American civil war he entered the Union army as captain of engineers, advanced to the rank of brigadier (March, 1865), and was afterward employed in the United States consular service, returning to his native country in 1871.

Eduard von Hartmann has in preparation a new work on æsthetics, which is to form a part of the complete edition of his works now being issued by Karl Duncker in Berlin. Some admirable short papers on æsthetic subjects, published years ago, show that Hartmann is specially qualified to write on this branch of philosophy. The new edition of Hartmann's works is to be in fine style, while the price will be reduced to about one-third of the earlier editions. His work on ethics, for instance, will cost $1 50 instead of $4. It is to be hoped that other publishers will follow Duncker's example, for scientific books in Germany are unreasonably expensive.

Under the editorship of Mr. F. G. Dumas, there is about to appear a new bi-monthly *Revue Illustrée* (Paris: Ludovic Baschet; New York: F. W. Christern), which will contain thirty-two pages of text, plus an illustrative supplement. The French school of short-story writers is to be represented abundantly in early numbers, as contributions are announced from MM. François Coppée, Alphonse Daudet, Ludovic Halévy, Henri Meilhac, Georges Ohnet, and André Theuriet. A specialty will be made of new music by MM. Massenet, Saint-Saëns, Paladilhe, Délibes, and others.

"D. B.'s" Dublin letter, which appeared last week, compared the Parliamentary returns with an ordinary map of Ireland. The nomenclature of the Parliamentary divisions is so far misleading as to show (on comparison with a Parliamentary division map such as that which appeared in the London *Times* of Saturday, Dec. 12) that the line sketched by "D. B." does not so exactly divide National from Conservative Ireland. A Conservative division lies partly outside it; and a National division runs north, wedge-shaped, along the west shore of Lough Neagh.

—Catlin's Indian portraits are well known, and have been deservedly reproduced in various forms. There is, however, another series in the same line which is worthy of more attention than it has received, and which is very rare. This collection was the work of J. O. Lewis, an artist who accompanied General Cass and other Indian Commissioners to treaty convocations which they held with the aborigines of the Northwest. The sketches of Lewis, largely in regions never visited by Catlin, were also drawn at least a decade earlier, and so show the Indian more nearly in his first and best estate. At the treaty of Prairie du Chien, in 1825, which first opened Wisconsin to settlement, and the breaking of which brought on the Black Hawk war, nine tribes were represented and twenty portraits were taken. On this occasion a dozen kegs of whiskey placed in the midst of the council were staved, and their contents spilled on the ground, by way of an object lesson on temperance. The expression on Indian faces as they witnessed this waste seems to have been caught by the artist. Another council supplementary to this on the Mississippi was held the following year at Fond du Lac, or the head of Lake Superior. In order to attend this solemn talk the Commissioner of Indian Affairs, T. L. McKenney, made a journey from Washington, and filled an octavo with details of his expedition into what he considered "the utmost corner of the West." Its pages abound in notices of Lewis and his labors. The artist here took many sketches, but secured only nine portraits. Indeed, in taking the first one he nearly lost his life. He chanced to draw it in profile, which the sitter observing drew his knife, crying: "You have left out half of my face. Put it in or I'll scalp you on the spot!" All subsequent likenesses were full-faced. Many were outlined soon afterward at Green Bay, Fort Wayne, and Missinnewa. In some cases views were painted of the congregated braves and chiefs, soldiers and civilians, as at Butte des Morts in 1827, Fond du Lac, etc. The latest portrait was of Black Hawk at Detroit in 1833. The costumes, badges, and ornaments of the red men as shown by the pencil of Lewis are less adulterated by civilized admixtures than in all works less ancient. Some of his paintings were ordered for the Indian Bureau in Washington. But the painter, like many of his craft, could manage a palette better than a publisher. His productions were never fully brought before the world. A selection of them—'The Aboriginal Port-Folio'—appeared in Philadelphia in 1835, with sixty-four colored plates. Some others came out in New York and in London. It is probable, however, that the author died feeling that his arduous and enthusiastic endeavors to show forth and perpetuate the most picturesque of Indian characteristics had not been appreciated. Yet several of his pictures were thought worth stealing by McKenney and Hall, for we find them copied without acknowledgment in their three pretentious folios on Indian Tribes. The portraits of Lewis are not mentioned in the catalogues of ten principal libraries in New England and New York, but 126 of them may be seen in the Wisconsin Historical Society's collections.

—The world moves although Doctor Dix stands still. In a volume of random verses by a Rector of Houghton Conquest and late Fellow of St

John's, the girls of Girton play an important rôle, and, in spite of the gloomy prognostications of Doctor Dix, it is not the rôle of the virago or the shrew, or any other proverbially to be dreaded character. An English reviewer of the book says, "Nothing can be more pathetic than the 'Tragedy of the XIXth Century,' which tells of a luckless examiner condemned in his public capacity to pluck for her Little-go the girl graduate whom he privately adores. Girton seems to be having an important influence on the Cambridge school of poetry. We are not surprised. The Graces are the Graces always, even when they wear spectacles." But has not Doctor Dix assured us that learning and grace are incompatible qualities? It must be that those English fellows are very poor judges of what constitutes true feminine charm.

—In the time of the French Revolution a member of the Convention went to the National Library to get the laws of Minos. Of course he did not succeed. But an Italian, Signor Federigo Halbherr, a pupil of Comparetti, found them a little over a year ago engraved on the stones which made the flume of a mill at Gortyna. At least he found some Cretan laws, though, as the preamble and the date are missing, and the only magistrates mentioned are otherwise unknown, the learned do not venture as yet to assign them to any author or period. All that can be said is, that they were less ancient than some other laws to which they refer as abrogated. Some other parts are also wanting, but there are still twelve columns left, evidently the most important find of Greek epigraphy for many years. Several editions have been published—by D. Comparetti at Florence, with an Italian translation and commentary; by Fabricius at Athens; by H. Lewy at Berlin, with a translation and notes; by F. Bücheler at Frankfort on the Main, with a German translation and a philological commentary, to which E. Zitelmann had added a legal commentary. R. Dareste has published a French version in the *Bulletin de correspondance archéologique d'Athènes*, which has been separately printed, and J. and T. Baunack have published at Leipzig a philological study, for which the curious dialectic forms give abundant occasion. No doubt these are only the first shoots of a whole crop of illustrative works. The laws will be discussed from every point of view, and the Gortynian inscriptions will fill an important section in classical bibliographies. We had written Gortynian tables, but Gortynian walls would be more correct. The stones appear to have formed part of the walls of a circular court-room, estimated to have been 33 metres in diameter. It must have been very convenient for the judge always to have his Revised Statutes before his eyes.

—There is a very agreeable mixture of fine though unadorned description, of fresh ethnographical information, and of historic Hellenic lore in the "Lettres à un ami" by Demetrius Bikélas, on his rapid tour through western Greece. The letters were addressed to the Marquis de Queux de Saint-Hilaire, a French Hellenic scholar, but have been at his suggestion laid before the public under the title 'De Nicopolis à Olympie' (2d ed., Paris, 1885). The first letter is dated on board the *Thessaly*—a Greek steamer which carried the writer through the Gulf of Patras, westward—on the 19th of April, 1884; the last on May 2 of the same year, at Athens, whither he returned. The day of departure was (though the traveller did not think of it) the sixtieth anniversary of the death of Lord Byron at Messolonghi. These two names are often mentioned in the letters with patriotic emotion, and the pages devoted to reminiscences of the heroic defence of that city and its tragic fall in the war of independence form a charming chapter of history, plainly but feelingly told. Every page of the collection breathes Greek patriotism, but the author is free from that Hellenic chauvinism which dreams of Byzantine greatness. Give his fatherland its natural northern boundaries—to embrace the rest of Thessaly and Epirus, and a part of Macedonia — and all the isles of the Ægean, with Crete, and his national aspirations will have their fill. But all this he not only prays, but hopes for. The book is redolent with patriotic optimism; and indeed the author furnishes abundant evidence in statistical facts of the rapid strides which the young kingdom has been making in the last two decades—that is, since the cession to it of the Ionian Isles—in material prosperity, improvements, industry, education, order, and security. Foreign travellers tell us the same agreeable tale. Greece talks war incessantly, but her territorial acquisitions since she recovered her freedom—the Ionian Isles, most of Thessaly, and part of Epirus—have been achieved without fighting, and the people have made a rather creditable use of half a century of peace. The formerly waste towns and lands are regaining life and population, roads are being built—here and there the smoke of locomotives tarnishes classical landscapes — the Isthmus teems with canal-diggers; the vine culture enriches Elis; Acarnania and Ætolia can be traversed by unarmed wayfarers; Zante flourishes; provincial towns boast of theatres. But much of the former simplicity and of what was national and semi-Oriental in dress and manners has been swept away by the inroads of Western civilization. The picturesque yields to the practical. The antique lives only in ruins.

—The curiosities of Mithriac worship at ancient Rome leads Orazio Marucchi, in the October (1885) *Nuova Antologia*, to a discussion of the prevalence in the Eternal City of this singular Oriental faith, so spiritual in its tenets, so remote from the gross polytheism of the all-too-hospitable Roman pantheon. This was a form of Mazdeism founded by Zoroaster, with the Zendavesta as its sacred book. The religion of Zoroaster revolved about two supreme incarnations, Ormuzd (Light) and Ahriman (Darkness), between which as mediator intervened Mithras, the θεὸς ἐκ πέτρας, who was believed to be generated as a flash of light from the contact of colliding bits of stone. He it was who offered the propitiatory sacrifice, and in his honor Zoroaster established a symbolic cavern, as image of the world, within which this expiatory offering was to take place. From this arose the custom of celebrating the mysteries of Mithras in grottoes, and of representing Mithras himself within the symbolic cavern. This Eastern superstition soon penetrated to the West, and its rapid spread was especially due to such favorers of the Orient as Helagabalus and Aurelian; whence, long before, Horace had said, "jamdudum in Tiberim defluxit Orontes." *Mithræa*, or temples of Mithras, soon abounded not only in Rome but in Hungary, Transylvania, the Tyrol, France, and even Germany. A remarkable *Mithræum* was discovered at Ostia in 1860. The worship was accompanied by curious developments. The great Christian doctor, St. Jerome, records that successive stages of the Mithriac initiation went by the name of *crows, mysteries, soldiers, lions, Persians, runners of the sun*, and *fathers*, every one of which was accompanied by special and mysterious ceremonies. Soon these rites associated with themselves, or rather assimilated, certain symbols and elements of the Christian religion; imitations of the Christian rites of baptism and the Communion were attested by Tertullian to exist; and finally Mithracism became the great rival of Christianity among the enlightened Romans, now ripe for a new religion. The superstition flourished luxuriantly till the year 392, after which it was proscribed by Theodosius. Just the other day a complete *Mithræum* was discovered in all its integrity near the Church of S. Martino ai Monti at Rome—sacrarium, symbolic figures, and all—witnessing the singular spread and extension of this most penetrating of Eastern creeds.

DICEY'S LAW OF THE ENGLISH CONSTITUTION.—II.

Lectures Introductory to the Study of the Law of the Constitution. By A. V. Dicey. Macmillan & Co. 1885.

For American readers the fourth lecture will probably have the greatest interest; it is this which deals with "Parliamentary Sovereignty and Federalism," illustrating the latter mainly by the case of our general Government. The author shows in the main a strikingly good understanding of our system, and he points out with keen perception certain characteristics of federal government which we are apt to pass by. And yet, from an American point of view, this chapter has the defect of appearing to find in the necessities of a federal system the cause of much which really existed in our States before the Federal Government had an existence. Historically it seems to be true that the doctrine of "the supremacy of the Constitution"—*i. e.*, its supremacy as *law* and all that this necessarily involves—had been bred in the bone on this side of the water. Relatively to our colonies their charters had always been unchangeable law—law for the legislatures as well as the courts and private citizens. Just as Riel's case has within a month or two been before the Privy Council in England to determine whether certain legislation in Canada was *ultra vires*, and just as Indian legislation is now submitted to English judicial supervision, so it was with our colonial legislation. Accordingly, when our Revolution came, consisting as it did simply in cutting loose from Great Britain and substituting the sovereignty of "the people," the colonies turned immediately, as the General Congress recommended, to the adoption of a written charter of government in which the new sovereign should declare his will. More than a dozen of these constitutions (seventeen, we believe) had been adopted before the Federal instrument was framed, several of the States having tried their hand at them repeatedly. Historically, therefore, it was not in any necessity of federalism that our written constitutions originated; it was because among the English people on this side of the water this was and always had been their fashion of government. Professor Dicey has not overlooked the class of facts to which reference is now made, or the inferences to be drawn from them; but it would seem that he has hardly allowed them their due weight. When he remarks of certain written Continental constitutions that they do not "contain a hint as to the mode in which a law is to be treated which violates the Constitution," it might have been added that this is true also of the Constitution of Massachusetts, framed in 1779 and still in force; and as well, we doubt not, of every other State constitution preceding the Federal one, and of nearly every one since. So far as the language of these documents goes (we are not speaking of the Federal instrument), there is probably (allowing for a few exceptions) nothing in them which *requires* a different result from that reached in France and Belgium, where no court "has ever pronounced judgment upon the constitutionality of an Act of Parliament."

Why is it that on one side of the water the provisions of the Constitution are construed as law, to be enforced in the courts, and on the

other as precepts of political duty, of "constitutional morality," not enforceable as law? It is not because "State Government throughout the Union is formed upon the Federal model." The existence of State constitutions and of decisions in State courts declaring laws unconstitutional before the framing of the Federal model, is noticed by Professor Dicey himself. The reason is, as we have intimated before, because our people, in Dicey's words, "had inhabited a colony governed under a charter, the effect of which on the validity of a colonial law was certainly liable to be considered by the Privy Council," as well as by other tribunals in England and here which were more justly entitled to be designated as judicial courts than the Privy Council was at that period. It was because we had always been familiar with the conception of delegated and limited legislative power, and never with any other—with the doctrine which Yorke and Talbot expressed in 1730 when they said, as to certain laws of Maryland, "If any laws have been there made repugnant to the laws of England, they are absolutely null and void"; which Murray, as Attorney-General, expressed in May, 1775, when he said of a law of Maryland putting a duty on imported convicts, "No colony can make such a law, because . . . it is in direct opposition to the authority of the Parliament of Great Britain. . . . There always is a restriction that they shall not be contrary to the laws of England." Accordingly, when we adopted written constitutions, it seemed a natural thing to interpret them as we did, and to say here also that laws repugnant to the requirements of the new sovereign should be "absolutely null and void."

There is another matter; but one hesitates to approach it, lest he get entangled in that "prolific crop of . . . controversial disquisitions on sovereignty" of which Sir Henry Maine has spoken as a product of our soil. Professor Dicey says: "One may say with sufficient accuracy for our present purpose that the legal sovereignty of the United States resides in the majority of a body constituted by the joint action of three-fourths of the several States at any time belonging to the Union"; and a note refers us here to Article 5 of the National Constitution. It is to be remarked that Dicey refers to legal sovereignty, as discriminated from the political sovereignty, and also that he does not here speak absolutely—his "present purpose" being that of pointing out that the national sovereign here is hard to find and hard to wake up; and that is true enough. But it would be difficult to assent in any sense to this indication of our "legal sovereignty."

Observe what "legal sovereignty" means; this valuable discrimination is emphasized by Dicey:

> "It should . . . be carefully noted that the term 'sovereignty,' as long as it is accurately employed in the sense in which Austin sometimes uses it, is a merely legal conception, and means simply the power of law-making unrestricted by any legal limit. If the term 'sovereignty' be thus used, the sovereign power under the English Constitution is clearly Parliament. But the word 'sovereignty' is sometimes employed in a political rather than a strictly legal sense. That body is 'politically' sovereign or supreme in a State the will of which is ultimately obeyed by the citizens of the State. In this sense of the word the electors of Great Britain may be said to be, together with the Crown and the Lords, or, perhaps, in strict accuracy, independently of the King and the Peers, the body in which sovereign power is vested."

The will of the electors really does assert itself by the present constitutional arrangements. "But this is a political, not a legal fact." It will be noticed, then, that there was no "legal sovereignty" among the English colonies before the Revolution.

Now the fifth article of our Constitution provides for the manner of making amendments to the Constitution, viz.: by proposals from Congress on a two-thirds vote of both houses, or from a national convention called by Congress on application of the legislatures of two-thirds of the States; the amendments thus proposed to be, in either case, ratified by the legislatures of three-fourths of the States, or by conventions in three-fourths thereof, as Congress may propose. The Constitution itself was framed by a national convention and was submitted to State conventions; but all of the fifteen amendments heretofore made to it have been proposed by Congress to the separate legislatures of the States (not to State conventions, as they might have been), and have been approved at different, convenient times, as it might happen in different States—languishing along sometimes for months, and even for several years before the requisite three-fourths of the legislatures had acted. Now, what and where, under such circumstances, is "*the body* constituted by the joint action of three-fourths of the several States"? The Constitution, as regards the adoption of proposed amendments, in no case contemplates any meeting in one of the people or the legislatures of the States. And then can that be the "legal sovereign" which may legally only pass upon what is proposed to it by Congress or a convention, and has no legal initiative?

Shall we then say that there is no "legal sovereign" in the United States? Perhaps so. Our ancestors were afraid of recognizing any such *legal* thing as uncontrollable power anywhere; the political sovereignty of "the people" of course they recognized. The possibility of such a state of things is recognized by Professor Dicey: "In spite," he says, "of the doctrine enunciated by some jurists that in every country there must be found some person or body legally capable of changing every institution thereof, it is hard to see why it should be held inconceivable that the founders of a polity should have deliberately omitted to provide any means for lawfully changing its bases . . . The question, however," he goes on to say, "whether a federal constitution necessarily involves the existence of some ultimate sovereign power authorized to amend or alter its terms is of merely speculative interest, for under existing federal governments the constitution will be found to provide the means for its own improvement." But is it true that the power to pass upon amendments proposed by Congress or a convention is the same thing as legal sovereignty, *i. e.*, "the power of law-making unrestricted by any legal limit"? May "three-quarters of the States" legally, *i. e.*, by any permission of the Constitution, legislate as they please? No. All that can justly be said is, that *one* very high act of sovereign power, that of amending the Constitution, is committed, not to three-fourths of the States, but to the checked and balanced alternative combination of agencies which is designated in the fifth article. All that is provided for is "amending." Would anybody say that there is any *legal* power to abolish the Constitution, leaving us nothing in its place? If not, how does Article 5 designate a legal sovereign?

This is, to be sure, an old discussion. Calhoun, not to mention others, spoke of "the voice of three-fourths of the States as the highest power known under the system." Sir Henry Maine also has touched the question—not in his well-known discussions on sovereignty in the 'Early History of Institutions' and in the 'Ancient Law,' but in a paper read before the English "Juridical Society" in 1855. After referring to the difficulty on the subject of sovereignty at that time existing in our country as "likely to grow to prodigious dimensions before this generation has passed away," he goes on to say: "If any part of the American people should be desirous of detaching more of their prerogatives from the several States, and of committing the powers so detached to the Federal authority, must the consent of each separate State be obtained to the innovation, or is there any other *body*, distinct from the central Government and from the several States, which can effect the desired change without infringing on positive law?" He proceeds to discuss and to discredit the doctrine of "State rights," and to declare that the fifth article gives "plenary powers of amending the Constitution . . . to three-fourths of the legislatures of the subordinate States. Now, whatever body," it is added, "has an unlimited authority to introduce amendments into the Constitution, is of course empowered to detach as great a measure of sovereignty as it pleases from the separate members of the confederation, and to annex it to the central Government—from which it seems to follow that by this fifth article the sovereignty over each separate State, and over the larger State arising from the Federal Union, is made, in Mr. Austin's words, 'to reside in the *States' governments as forming one aggregate body.*'" The italics are Maine's. These and all like statements appear to be open to criticism as not taking sufficiently into account the considerations above named. In no sense, as we venture to think, is it true that the entire sovereignty, in the sense of the legal sovereignty, "the power of law-making unrestricted by any legal limit," is committed here to any body or combination of bodies. On the other hand, that appears to be true which was said by Mr. Webster in his argument in the Rhode Island case (Luther vs. Borden): "Though this Government [that of the Union] possesses sovereign power, it does not possess all sovereign power; and so the State governments, though sovereign in some respects, are not so in all. Nor could it be shown that the power of both, as delegated, embraces the whole range of what might be called sovereign power."

But we must end this consideration of Professor Dicey's book and the questions which it raises. One would like to comment on his solid and sound utterances on the relation of courts to morality; *e. g.*, this: "There is no legal basis for the theory that judges, as exponents of morality, may overrule acts of Parliament." Is it otherwise here? Judges now and then, especially in heated dissenting opinions, as in the "sinking-fund cases," express themselves as if it were—as if some things which Parliament might do our legislatures could not do, as being contrary to morality and justice, because they hold only a delegation of strictly legislative power. It would be a good thing if some judge, while he has his hand in, would show us how he works this out.

Another extremely interesting thing we have only time to touch. Dicey refers to the fact that what he calls "conventions"—*i.e.*, understandings, usages, not having the force of law—exist in the working of our constitutions as well as the English. That is no doubt true, and it is a highly interesting fact he cites, too, viz.: the conspicuous instance of the Presidential Electors, who, by force of usage and public opinion merely, are held bound to vote with their party. If in 1876 a Republican Elector had voted for Tilden, it would have been, in the English sense, unconstitutional, and yet not illegal; it would have been in our sense both constitutional and legal; and yet in a sense common to both countries it would have been contrary to the "conventions of the Constitution." Dicey mentions as another "convention" that a President shall not be reëlected more than once. That is quite overstated. We have re-elected our governors many times; and when we get a good enough President it is probable

that no talk of a "third term" will be any serious obstacle to reëlecting him repeatedly. There is, however, one very interesting "convention," touching the manner of changing our State constitutions, to which we must allude. It has lately been made the subject of a valuable pamphlet by Mr. C. S. Bradley, of Rhode Island, formerly Chief Justice of that State. In controverting the doctrine of a recent advisory opinion (14 R. I., 649), given by the judges of the Supreme Court of that State to the Legislature, Judge Bradley shows that there has grown up in this country what has been called a common-law doctrine as to the method of summoning the political sovereignty of the several States into action. This doctrine, it must be noticed, does not necessarily touch the case of the Federal Government. But in the States it appears to have become the accepted and regular mode of proceeding, that the Legislature should propose to the electors to send delegates to a Constitutional Convention. This is the general practice equally where there are clauses, like that in the Federal Constitution, providing for amendments in other ways, and in cases where there are none; it is irrespective of anything but a prohibitory provision in the Constitution. Thus, it will be seen, we are bringing that wild creature, the political sovereign, into orderly conduct by convention and usage. So that, in the case of this hitherto untamable subject, we may begin to hope for results like those which Emerson celebrates in recording the triumphs of civilization over "the aboriginal man": "They combed his mane," he says, "they pared his nails, cut off his tail, set him on end, sent him to school, and made him pay taxes."

Political students in England are remarking of late years upon the alarming facility with which any Ministry may change the Constitution, and they are turning with curious interest to an inspection of the highly conservative arrangements of our constitutions. More and more attention is likely to be paid to this subject. If it results in the production of more books of the quality of Sir Henry Maine's essays on 'Popular Government' and of these lectures by Professor Dicey, we shall have great reason to rejoice. Thus far, as regards the legal aspect of his subject, Dicey's book is of unique interest. We heartily commend it to the attention of students of our constitutional law. "One reason," he well says, and it is as true for us as others, "why the law of the Constitution is imperfectly understood is, that we too rarely put it side by side with the constitutional provisions of other countries. Here, as elsewhere, comparison is essential to recognition."

AN INDEPENDENT JOURNALIST.

The Life and Times of Samuel Bowles. By George S. Merriam. 2 vols. The Century Co. 1885.

Samuel Bowles was a great man in a little village. The son of a newspaper proprietor, he carried the Springfield *Republican* to a very high pitch of perfection as a news organ, and put himself on a par with the editors of the metropolitan dailies. He was a great gossip, and not a safe confidant, and his indiscreet revelations or suggestions of what was going on in politics behind the scenes insured the attention of the editorial fraternity, and gratified his love of power and sense of importance. "The theory and idea of journalism which he exemplified," and which Mr. Merriam has undertaken to celebrate at great length, was not the same at all stages of his career, yet was pretty constant in some particulars. To write over and condense the news of the day, as opposed to mere scissoring; to be as inclusive as possible; to be enterprising in the collection of news, and not too squeamish in reporting it; to multiply short editorial paragraphs, and to have these "biting," as he advised Mr. Sanborn in the case of the *Commonwealth;* to make no retractions or confessions of error; to insist upon the distinction between the man and the editor—such was the mechanics of Mr. Bowles's "art of newspaper-making," to quote Mr. Merriam's phrase. His fundamental aim was ever to give his public their fill of what they were supposed to crave beyond measure—facts and news. This justified, in 1872, the *Republican's* "general rule . . . of publishing everything, for and against our friends, that has a peculiar interest for our readers"; while from a much earlier period the editor freely permitted his regular correspondents to wreak their personal spite on his friends—a license entirely disconnected from the theory of "independent journalism," or the sense of duty, superior to personal considerations, that an editor owes to his conscience and the public.

The sort of independent journalism which Mr. Bowles gradually achieved consisted, in effect, in making a fetish of his journal. "The *Republican*," he wrote to Mr. Dawes, in 1872, against whom, under the rule above mentioned, he had just given currency to charges of implication in the Crédit-Mobilier bribery, because he knew his readers would take an interest in them—"The *Republican*, I trust, is an institution. It is of vastly more consequence than myself, my feelings, or my fate. I don't mean to stand in its way." This reminds one of Coleridge's Jew who always lifted his hat on mentioning himself. Such language, from the lips of an editor who looked upon his journal primarily as a means of giving currency and potency to his own cherished convictions, would be unintelligible and indeed meaningless. In the case of Mr. Bowles it is seen on analysis to be nothing more than an evasion of personal responsibility, under the guise of a highly virtuous independence. Or shall we say that he deceived himself with phrases? Fifty years ago a notorious daily "institution" was founded in this city, and the following extract from its salutatory fits at all points the ideal of the Springfield *Republican* in the later years of Mr. Bowles's life:

"We shall support no party, be the organ of no faction or coterie, and care nothing for any election or any candidate, from President down to constable. We shall endeavor to record facts on every public and proper subject, stripped of verbiage and coloring, with comments, when suitable, just, independent, fearless, and good-tempered. If the *Herald* wants the mere expansion which many journals possess, we shall try to make it up in industry, good taste, brevity, variety, point, piquancy, and cheapness."

This unobjectionable manifesto of James Gordon Bennett's, in the first number of his independent "Satanic press," shows the necessity of defining the term which was Mr. Bowles's boast and is Mr. Merriam's admiration. Bennett, to do him justice, prefaced the foregoing with its proper interpretation: "In *débuts* of this kind, many talk of principle—political principle, party principle—as a sort of steel-trap to catch the public. We mean to be perfectly understood on this point, and therefore openly disclaim all steel-traps—all principle, as it is called—all party, all politics." Far be it from us to place the Springfield and the New York editor in the same category of "independence," though we must deny to both the right to assume this title in the highest sense. Mr. Bowles could never have made so unblushing a disclaimer as that just quoted; and yet, after having perused these volumes, we feel constrained to say of him what Rousseau said of the Neuchâtelese, that he was a man "not without morals, but without principles." This distinction is worth an illustration or two.

While Mr. Bowles was in his swaddling-clothes—or, to be more precise, when he was six weeks old—a budding editor in Newburyport, Mass., issued a paper with the following announcement:

"As to the political course of the *Free Press*, it shall be, in the widest extent of the term, *independent*. The publisher [*videlicet*, the editor] does not mean, by this, to rank one amongst those who are of everybody's and of nobody's opinion; who forge their own fetters and cannot move beyond the length of their chains. . . . Its principles shall be open, magnanimous, and free. It shall be subservient to no party or body of men; and neither the craven fear of loss, nor the threats of the disappointed, nor the influence of power, shall ever awe one single opinion into silence. Honest and fair discussion it will court; and its columns will be open to all temperate and intelligent communications, emanating from whatever political source. In fine, he will say with Cicero: 'Reason shall prevail with him more than popular opinion.'"

The sincerity of this profession needs no other test than that afforded by the subsequent career of the writer as editor of the *Liberator*—a journal whose independence both antedated the Springfield *Republican's* by more than a third of a century, and proceeded from moral beliefs, purposes, and initiative quite foreign to Samuel Bowles's temperament or journalistic conception. "A great newspaper," he writes to Mr. Sanborn in 1863, "is not a reformer, not a radicalist, but may be and should be a leader—a go-between for the head men and the masses." A queer notion of leadership, truly, but a sufficient statement of the doctrine of expediency and of compromise, which is incompatible with genuine independence; and as a matter of record in this biography, Mr. Bowles, however outspoken as an editor, was essentially timid and time-serving as a politician. Now in 1851 "the head men" (viz., of the Webster Whig party, of which Mr. Bowles was a devoted adherent, notwithstanding the 7th of March speech) were disposed to crush out the independent utterances in print and in speech of the Abolitionists and other advocates of a higher law than the Fugitive Slave Law. "The masses," on their part, were more than willing to assist in this suppression. The *Republican's* mediation consisted in inciting a mob against Garrison, Phillips, and Thompson, on their attempting to speak in Springfield. As Mr. Merriam candidly relates: "The whole stress [of a certain article after the event] was directed not against the mob that forbade Thompson to speak and hanged and burned him in effigy, nor against the respectable classes that had encouraged and tolerated this violence, but against those who had declared that they would disobey or resist the law for the return of fugitives."

Mr. Bowles's biographer necessarily dates his graduation as an independent editor after the time when he was thus engaged in putting down free speech. It was still further postponed. In the spring of 1857 Mr. Bowles, without relinquishing the *Republican*, went to Boston to edit, as part proprietor, the reorganized *Traveller*. For Boston he had long entertained a mixed feeling of provincial and sectional jealousy, and of professional superiority, the result of his success in limiting the western circulation of the metropolitan press. He therefore approached his difficult task of rivalling his Bostonian competitors in their own domain, not in a spirit informed with lofty aims and a simple earnestness, but with a bumptiousness which at once made him the laughing-stock of his esteemed contemporaries. Success might have caused this to be forgotten, but the experiment quickly proved a failure. Meantime the Abolitionists held their customary May anniversary meetings, and the *Traveller's* reporters enjoyed the courtesy always extended to their craft, in spite of frequent abuse of it with misrepresentation and ridicule, especially in the Democratic press. Judge of the

surprise of the Abolitionists on encountering this treatment from a paper professing to be "Republican, independent, progressive." The *Traveller's* account of the first session was a highly seasoned travesty, and one of the most eminent and respectable of the anti-slavery leaders took it upon himself to visit the office and protest against it. Being referred to the editor-in-chief, and not doubting that the case was one of disciplining a subordinate, he was dumbfounded on being frankly told by Mr. Bowles that he had doctored the report himself.

This incident has escaped Mr. Merriam's attention, for he is too conscientious to have omitted it deliberately, and he would be the first to see its bearing on the quality of Mr. Bowles's independence. Again and again, however, we are reminded that this was an acquired virtue with the editor of the *Republican*, whose growth toward it is held up as a singularly gratifying study. The summit was evidently never reached, in Mr. Merriam's estimation, until Mr. Bowles came to an open breach with the Republican party over the question of a second term for President Grant. It is well known that he was a conspicuous figure in the group of editors who promoted the Cincinnati Convention of 1872; that he went there as a strong Adams man; that his passion for newsmongering overcame his prudence, and led him to give to the world that honorable but disastrous private letter of his candidate to Mr. Wells which as effectually destroyed Mr. Adams's chances as

> "that dishonest victory
> At Chæronea, fatal to liberty,
> *Killed with report* that old man eloquent";

and that he accepted, though reluctantly, the nomination of Greeley as answering the ends of the reform movement, and gave it his support in his paper. He had an opportunity to withdraw as other disgusted journalists did, but he would not, and his steadfastness cost him friends and profits without causing him to flinch. Nevertheless, without questioning his zeal as a reformer (in this particular instance), it must appear on reflection that there was more of partisanship and less of independence in abiding by the decision of the Convention than in revolting against it. Our melancholy experience of conventions and caucuses has taught us that for one man who adheres to "the cause," a thousand succumb to the rules of "the game" by which the successful nominee is imposed upon the party. And in the case of the formation of a new party, the inducements to submit to the result of a representative conference are almost overwhelming. Constitutionally and professionally, too, Mr. Bowles was not given to retraction, and he was able to save his pride by sacrificing his judgment.

There is no trace, in this episode, of the perspicacity on which Mr. Bowles prided himself. In the latter part of February, 1861, he wrote, "My instincts rarely fail me in politics." As a fact they were constantly misleading him, and in the very same letter in which he made this avowal to Mr. Dawes, he wrote of the new Governor of Massachusetts, best-prepared of all for the civil war about to break forth: "What was apprehension about Andrew is now conviction. He *wobbles* like an old cart—is conceited, dogmatic, and lacks breadth and tact for government. . . . We were right at Worcester last August [in opposing Andrew's nomination for Governor]; and people will yet see it and perhaps acknowledge it." So his favorite candidate for President in 1860 had been (Heaven save the mark!) N. P. Banks, whose charlatanry completely imposed upon him. Thus, he wrote in November or December, 1859, to Charles Allen:

> "I think my opinion of Banks is quite as likely to be correct as your Mr. ——'s. I knew him as well as ever he did, and that in his riper years and character; I think my capacity for judgment is quite as great as ——'s and I should be sorry if I had so narrow and prejudiced a soul as he; and yet you rather take his estimate of Banks—and simply, I suppose, because I have taken no pains to instil mine into you, while he has his. Isn't it so? . . . Banks stands the best chance to-day. There are many obstacles to his nomination, which, if powerfully combined, may prevent it; but I think that he will succeed both at the convention and before the people. None of our politicians more thoroughly appreciate 'the epoch' than he, and no man in the country will make a more powerful and brilliant administration."

We have said all that we deem necessary in order to convey a just idea of Mr. Bowles's special claim to this disinterested tribute of a thousand pages of fair print and paper. Other claims as a journalist to so much distinction it would be hard to enumerate. He was an extremely fluent writer, but his style was not remarkable, his thoughts were neither original nor weighty, and his lack of early training was never compensated by self-culture or wise reflection. His comments on passing events were purely ephemeral, and his influence on larger national politics inconsiderable, if we except his part in bringing about the Greeley fiasco. Mr. Merriam's history of his "times" is interspersed with the *Republican's* (not always Mr. Bowles's) utterances on the successive political occurrences, but they have hardly any value. Mr. Bowles's private letters afford a very good insight into his character, yet it is questionable if the revelation is likely to help his fame. As literature they never would have called for preservation. What was most attractive about him—his social charm—cannot be reproduced in a biography. Doubtless it will long be a pleasurable tradition among his friends and acquaintances, tempered by recollections of moods for which his disordered digestion was responsible.

Mr. Bowles's life was conspicuously uneventful, and the history of his times was a necessary crutch to any biographer who adopted the scale which has seemed to Mr. Merriam not disproportionate to his subject. The political narrative alternates with the letters, and will, we dare say, have an interest for the generation now on the stage, and a certain convenience for their elders (particularly in Massachusetts) as a summary review of their own experience. Throughout, Mr. Merriam evinces a laudable freedom from bias, so far as Mr. Bowles is concerned, and the composition has evidently been with him a labor of love.

MORSE'S JAPANESE HOMES.

Japanese Homes and their Surroundings. By Edward S. Morse. Boston: Ticknor & Co.

THE felicitous title which Professor Morse has chosen for his long-awaited book is both a lure and a target. It fascinates and provokes criticism before we open the lids or peer through the bamboo window stamped on the cover. Those who get the book expecting to find in it a study of what we usually mean by "homes" will be disappointed. It does not treat of the people and their thoughts, associations, social life, and sentiments, etiquette, or dietetics, but of the house Japanese, even of carpentry, materials, floors, ceilings, roofs, furnishings, gateways, wells, gardens, and whatever belongs to the dwellings of the Mikado's subjects. One may fairly wonder how there can be homes, in the sense impressed upon the English language, in a country where polygamy prevails. Indeed, the Japanese language itself witnesses to houses, dwellings, native places, but not to the home-idea in which are briefly expressed the conceptions of personality, family unity, privacy, and sacred defence against intruders. The adjective in the title does not rightly qualify the noun, and the association of ideas is incongruous. To take a word which is itself the mint-mark of Germanic civilization, and use it as a title of a book descriptive of the constructive art of Japan, is a mistake, discoverable as soon as the book is opened.

The work is in reality an encyclopædia of the Japanese house, treated with the loving hand of a master who admires while he writes and draws. The subject has long awaited conscientious treatment, and this it has found in one who is as accurate as he is painstaking. All the more need of thorough treatment exists because the Japanese, in coming in contact with an alien and aggressive westernism, have already lost many of their peculiarities of art and civilization. Already some of the details of the typical dwelling are obsolete among the native carpenters in the large cities, and Professor Morse has done a thankworthy service in preserving in types and woodcuts these exponents of the Japanese taste. He quotes approvingly the example of one Miyada, a scholarly physician, whose self-imposed vocation it was "to learn any art or accomplishment that might be going out of the world, and then describe it so fully that it might be preserved to posterity." For the study of the sociology and ethnology of these islanders of northeastern Asia the work will possess a permanent interest. It is manifest that we cannot well understand the unique decorative art, the etiquette, literature, or civilization of Nippon without knowing something of its domestic architecture. Indeed, it would be well for those who crowd their houses with bric-à-brac from the Archipelago, or who aspire to have a Japanese "boudoir," to read well Professor Morse's book. To our own architects and builders of country seats, sea-side cottages; to landscape gardeners and decorators, as well as to the general reader, the book has a distinct practical value. The 300 or more illustrations are not in the native perspectiveless style, but are drawn from the original subjects by the professor himself, and are reproduced with scrupulous fidelity. Even the stay-at-home and "fireside traveller" can understand clearly the beautiful sketches and finished pictures. All native words are translated, and a glossary and general index complete the handsomely printed and well-bound book. While thus a timely work, it is not an ephemeral but a standard treatise of enduring interest.

In his chapter on "The House," the author treats of the general appearance, framework, and foundation, and the tools and materials used in construction. The Japanese carpenter, as his name implies, is *the* mechanic, and in nicety of general work, delicacy of finish, artistic sense, and fertility of resource, is the superior of the average man of saw and plane among us. The name for a dentist—"tooth-carpenter"—conveys more flattery of the *dai-ku's* skill than derogation of the tooth-setter's profession. There is in Japan next to no architecture, as we understand it, but there is marvellous carpentry. Wood is the typical substance for building, and nearly all forms of their stone work are adaptations from wooden originals. In treating of "Types of Houses," the city, country, and fisherman's dwellings are illustrated. Special studies are given of the famous mud-built storehouses, which are, even in minute details, but fire-proof safes enlarged. The window and door cracks of these are plastered shut with clay kept ready to be mixed at a moment's notice of fire—after candles have been set burning in the interior so as to convert the air into carbonic-acid gas. These storehouses are usually as faithful to their trust as our iron safes. The now vanishing *yashiki* (spread-out houses), once the glory of Yedo, are but slightly treated of, but their old-time glory and populousness are suggested. No study of Japan would be complete without a reference to the picturesque roofs, which not only at once attract the Western eye, but figure in the poetry

and art of the country. On this subject there are properly given thirty-one pages of text with thirty-six illustrations. We prophesy, in our villa and rural architecture of the future, much borrowing in this regard from the Japanese by our people

In the matter of interiors, the author is not embarrassed by the evident richness of his note-books and journals, and in the two chapters devoted to them we have a pen-picture of the "still life" of Japanese housekeeping. Its severe simplicity is the very reverse of our crowded and cluttered-up rooms. The ease of housekeeping in Nippon will surely be admired by our cumbered matrons. A careful native has calculated that the average rental of houses in Japan is six dollars per annum, and the cost of furnishing an artisan's house (exclusive of mats and luxuries) is five dollars and thirty-six cents. A chapter on "Entrances and Approaches," one on "Gardens," and another on "Miscellaneous Matters," completes this unique study.

No such work as this has been done for Japan, and the catholic sympathies of the author enable him to present the merits of the Japanese house from the view of a native. Thus seen, it is not the bare and cheerless hut, the cellarless and garretless box devoid of comforts, or the toy-cottage for children, which alien tourists so often picture to us. It is rather the healthful, comfortable dwelling of a people who love simplicity, refinement, and art, whose heart is near to nature, and whose eyes have been educated by her repose and beauty. It is as thoroughly the balanced product of the conditions of the earth, air, and climate as modified by man in the Japanese Archipelago, as is the *keya* tree or the wistaria flower. The notes and comments of the author on the native art, decoration, flower-grouping, and on things beautiful or repellant to the Japanese taste, add greatly to the interest of his special theme. His criticisms upon our Western shortcomings are exceedingly piquant, albeit well flavored with exaggeration. It is delightfully refreshing thus to see ourselves in the Japanese mirror. At the same time it begets in our minds a horrible fear lest the Japanese may not only lose their own high ideals, but mar the best of those borrowed from Christendom.

RUMANIAN FAIRY TALES.

Roumanian Fairy Tales. Collected by Mite Kremnitz. Adapted and arranged by J. M. Percival. Henry Holt & Co. 1885. Sq. 16mo, pp. 243.

In reading fairy tales that are so much more tinged with local color, and so much fuller of the play of poetic imagination, than those of the rest of Europe, which repeat the same stories in other forms, we naturally inquire whether they are not sophisticated—whether the form and the little touches which so charm us are not due to the poetic feeling of the collector and transcriber. Fortunately, in this case, the answer is easy. The Rumanian peasants of the mountains and uplands are among the most unsophisticated inhabitants of Europe, and have been brought little into contact with modern civilization. They are a mixture of three races, the old Dacian, the Latin, and the Slavic, and have the peculiarities and the qualities of all three. In costume and appearance they still resemble the Dacians pictured on Trajan's Column; the Latin influence is plainly visible in the language, and in the constant recurrence of proper names like Trajan and Titus; the Slavic element is seen in the poetic temperament, and in a hundred little ways and usages.

The collection of Mrs. Kremnitz, from which the present is taken, was translated by her into German from a number of tales taken down by different persons from the mouth of the people, only a portion of which have been printed in the original Rumanian. The few slight changes made by her were not additions, but merely suppressions and abbreviations, generally in the characteristic but somewhat prolix introductions. Of the Rumanian transcribers, the best known is Mr. Slavici, an original writer of great power, whose tales of peasant and village life (some of them have been translated into German by Mrs. Kremnitz) have great popularity, and whose book, 'Die Rumänen,' is the recognized authority for the history and condition of the Rumanian subjects of Hungary. Mr. Slavici was born in Transylvania, and is now the editor of the chief Rumanian journal at Hermannstadt. Although himself a writer, he is too conscientious, and admires the poetic gifts of the Rumanian peasant too much, to allow himself to change or dress up what he hears. The conscientiousness of Mr. Ispirescu, on the contrary, is due to his prosaic character, to his being merely a collector and transcriber, with a great love of accuracy and detail, which are the qualities of his profession, that of a practical printer. In his collection ('Legende saŭ Basmele Românilorŭ adunate din gura poporului,' Bucarest, 1882), the largest which has yet appeared, containing thirty-eight stories, he is careful to note by whom and when each tale was recited. Thus we learn that, of the stories in the translation before us, the second was told in 1868 by a soldier of the village of Bulbucata, in the district of Vlasca; the fourth was heard from his father, in Bucarest, between 1838 and 1844; the thirteenth was taken down in 1874 from the lips of Leonida Tănăsescu, of Bucarest.

The American translator, Miss Percival, has done her work so well that many of the tales seem translated directly from the Rumanian originals; but occasional slips, such as using *Herr* instead of *Mr.* to translate the Rumanian *Domnul*, and retaining the German word *Tellerchen* as the title of one of the stories, make one query whether she did not suppose German to be the language of the country. The adaptation and arrangement mentioned on the title-page consist in occasional attempts to please conventional religious feeling, such as the substitution of two angels for Christ and St. Peter in "Stan Bolovan," and in the omission of two tales, "Ivan with the Knapsack," a very characteristic story, but one in which St. Peter plays too important a part to be conventionalized; and "The Enchanted Pig," which we regret, for it has nothing disagreeable about it but the name, and is really only another and a very pathetic version of the familiar "Beauty and the Beast."

The substance of all these tales, even the incidents, are much the same as of those with which we are already familiar. There is only one, "The Voice of Death," whose like we have never happened to meet elsewhere. But, as we said at the start, there is a wealth of local color and allusion, and a completeness of poetic form, which mark them out from others and give them a higher place as literature. Who that has come down from the Carpathians to the broad valley of the Danube will not recognize the following picture? "When he had thus arrived nearly at the end of the world, where what is mixes with what is not, he saw in the distance, in the middle of a field which lay spread out as flat as a cake, a sheep-fold. By it stood seven shepherds, and in the shadow within lay a flock of sheep." Or this: "They would fain have gone to the end of the world to see the sky close by, or at least far enough to reach the spot where the earth grows marshy before it comes to an end." Or this: "How many days and nights he journeyed over this moor Heaven only knows; but one morning when he awoke he saw in the distance, as far off as if it were in the other world, a streak of light like the fire which shepherds build at the entrance of the fold."

One can scarcely read a page without meeting some phrase, usage, or incident recalling south-eastern Europe. Now it is the use of basil for sprinkling holy-water, now the belief of the need of some human sacrifice to keep a church belfry from falling down, now a mention of buffalo hide, now the three crosses made to the east and the three prostrations also to the east, when the old man comes to a forest as thick as a wall. The goddesses Friday and Sunday, introduced into some of the stories, are survivals of a mythology which has left its imprint on the whole Eastern Church. No tale is without pithy sentences and moral reflections to be matched only in the similar Russian peasant stories. "That is the way with emperors [they are always emperors, never kings]. No matter how much they wish to guard their wives, if they hear of war their hearts fairly leap from their bodies, their brains swell almost to bursting, their eyes grow dim, and, leaving wife and children in God's care, they dash like the wind to battle." "The road of the hungry is always a long one." "There is no spur more powerful for a man than to see his children starving." "Where there are three grown daughters in a house, beware of putting your head in."

These examples will suffice; but we cannot refrain from mentioning the characteristic introductions and conclusions to each tale, such as: "There happened once what happened once; but if it had not happened it would n't be told"; or "Once upon a time something happened whose like never occurred before—if it had not happened it would not be told—since the flea had one foot shod with ninety-nine pounds of iron and jumped into the skies to get us fairy tales, and the fly wrote on the wall, 'Let him be a liar who does n't believe them.'" As endings they have

> "Into the saddle then I'd sprung
> To tell this tale to old and young."

Or this, which is more in the Italian style, as shown by Professor Crane: "I was there, too; but as I am lame in one foot, I did not arrive until the wedding was over, and had great trouble in finding some clear broth, which I searched in vain for a crumb of meat and then sipped from a sieve, so you can imagine how much I had and how I spent the time." The original is in verse.

Apart from all scientific considerations, and from all mythological and ethnological interest, this latest book is one of the best collections since that of Grimm, or, to go further back to the earliest appearances of the fairy tale in European literature, since the delightful 'Pentamerone' of Giambattista Basile (published first at Naples in 1637), of which there is an excellent translation (worthy of reproduction) by John Edward Taylor, with illustrations by Cruikshank.

Descriptive Catalogue of the Government Publications of the United States, September 5, 1774—March 4, 1881. Compiled by order of Congress by Ben. Perley Poore. Washington: 1885. 4to, pp. 1,392.

The preface to this huge yet not unwieldy volume exposes clearly enough the mistakes made by Congress in ordering its compilation—neglecting the nucleus begun by the Boston Public Library, and failing to enlist the trained skill of the national corps of librarians in an enterprise of the most difficult kind. We shall not dwell on the fundamental shortcomings which had their root in legislative ignorance. The Catalogue proper ends on p. 1241. Its arrangement is strictly chronological, the first entry being an 'Abridgment of Laws in the American Plantations' published in London in 1704; the second, Sparks's 'Writings of Washington'; the third,

fourth, and fifth, the Works of Hamilton, Jefferson, and Adams'; the sixth, 'The Madison Papers'; the seventh, 'Post-office Statutes'; the eighth, 'Force's Archives'; and finally we reach the 'Journals of the Continental Congress' from 1774 on. The public documents of the first fifty years fill 170 pages; of the next fifty-seven, 1,071 pages. Each document is described in the briefest manner, three and four-line entries being most numerous. An enormous number of private "claims" make the personal feature of the index very striking; and probably, as the number of claimants, original and hereditary, is endless, this may be considered the most popular feature of the Catalogue. Of how much use the Catalogue will be to those who wish to use the information contained in the multitudinous reports on scientific and historical subjects, it is too early to say. Its serviceableness to them will, of course, depend upon the fulness of the index, which appears to omit a great deal. Thus, on page 1089 is chronicled, in the order of its date, a report on the Geology of the Henry Mountains, but we can find no reference to it in the index except as a mere number under "Geological and Geographical Surveys." On the same page is a study of Indian Languages, which is likewise unfindable in the index, except in the same manner under "J. W. Powell"; and this is true also of the reports on Locusts, on Palæontology, on the California Indians, on Chronometer rates, on Tables for finding latitude by altitudes of Polaris (though other reports on finding latitude are indexed), on Public Instruction in Europe, on Medical Education (though another report on the same subject is indexed), on Native Trees (though other reports on tree-culture are indexed, under Forestry, without a cross-reference from Trees), on the Navigation of the Caribbean Sea (a volume of 598 pages), etc. All these omissions we find in one column (one-half page), and the list illustrates the variety of topics treated in "Public Documents," as well as the imperfections of the index. The lack of any system of double entries, we must also observe, makes a typographical error sometimes fatal to research. Thus, under "Slavery," is entered the memorial of a Boston Emancipation League, said to be found on p. 84, where it will be sought in vain, and the entry is not repeated under "Boston." In fact, it may some day be thought worth while to make a new index by the coöperation of experts.

Since we appear to have misinterpreted the law under which this Catalogue was ordered to be printed, we will make amends by restating the matter somewhat fully. The first section of the Joint Resolution of February 9, 1885, which enacts the printing and distributing of the work, provides for the printing of 6,600 copies, 1,000 of which are to be bound in full leather so as to be uniform with the usual set of Congressional documents, and the remaining 5,600 to be bound in half-leather, these last resembling, in size and binding, the *Congressional Record*. The provisions as to distribution are as follows: 2 copies each to the Executive Mansion, Department of Agriculture, Smithsonian Institution, and Government Printing Office; 4 copies to the Senate Library; 10 copies each to the Post-office Department and Department of Justice; 12 copies to the Library of the House of Representatives; 20 copies each to the War and Navy Departments; 25 copies each to the Treasury and Interior Departments; 40 copies to the Department of State, mainly for distribution to the foreign legations; 50 copies for the use of the committee under whose auspices the work was compiled; 60 copies to the Library of Congress, 50 of these to be for foreign exchanges; 1,500 copies for the use of the Senate; 3,000 copies for the use of the House of Representatives; 1,000 copies for what are technically called the "Reserved" documents, but more generally known as the "Congressional" documents; 818 copies "to be delivered to the Secretary of the Interior for distribution to such libraries, not depositories of public documents, as shall be named for this purpose by each Senator, Representative, and Delegate in Congress." As some of the provisions regarding distribution contained in the first section duplicate sections of the Revised Statutes, the third section of the resolution enacts that all provisions of law under which any additional copies might be printed are, so far as they apply to this work, repealed. The second section provides that 500 copies be printed and half-bound in leather for sale at ten per centum advance on cost price. Of these about 400 are yet unsold, and copies may be had by sending a money-order for $1.90 (payable to Mr. Cadet Taylor, Chief Clerk) to the Public Printer, Washington, upon which the book will be sent to any post-office in the United States, by registered mail, without extra charge. When this edition of 500 copies is exhausted, Congress may order a second issue to be printed from the stereotype plates.

As regards the distribution of the work to libraries, instead of limiting the supply in this direction, the law provides more than three times the usual number of copies to be sent to libraries and other literary institutions. Out of the 1,000 copies which the law enacts shall form part of the regular sets of Congressional documents, one copy is delivered to each State and Territorial library, and to other institutions (libraries, colleges, literary and historical societies) designated as depositories according to the provisions of the Revised Statutes, one copy each, as follows: New York 30, Pennsylvania 24, Ohio 19, Illinois 17, Massachusetts and Missouri each 15, Indiana 14, Michigan, Tennessee, and Texas each 11, Georgia and Wisconsin each 10, Iowa, Kentucky, and Mississippi each 9, Alabama and New Jersey each 8, South Carolina and Virginia each 7, California, Kansas, Maine, and Minnesota each 6, Connecticut, Maryland, and North Carolina each 5, Arkansas, Louisiana, New Hampshire, Rhode Island, Vermont, and West Virginia each 4, Colorado, Delaware, Nebraska, and Oregon each 3, Florida 2, and Idaho, Montana, and Nevada each 1—or about 365 copies of the work in all. In addition to this, the 818 copies especially provided for libraries will be distributed by the Superintendent of Documents of the Department of the Interior to two additional libraries in each Congressional district, and to two at large in each State, as designated by Senators and Representatives. It is not unreasonable, moreover, to suppose, in view of the fact that members of Congress have at their unrestricted disposal the large number of 4,500 copies, that not a few of these also will find their way into libraries.

The joint resolution referred to above might be cited as an example of the careless way in which Congressional laws are framed and printed. The first section orders the distribution of two more copies of the work than the printer is authorized to print for the purpose of such distribution. And the direction, "forty copies for the Department of State; a copy to be sent to each legation of the United States abroad," causes confusion, because elsewhere throughout the section the various distinct items of distribution are separated by semicolons; but the intention here is that the foreign legation copies are to be furnished out of the forty sent to the Department of State, and this intention would have been properly expressed had a comma been used after the word "State."

Fishing. By H. Cholmondeley-Pennell; with Contributions from other Authors. [The Badminton Library.] Boston: Little, Brown & Co. 2 vols.

Hunting. By His Grace the Duke of Beaufort and Mowbray Morris; with Contributions by the Earls of Suffolk and Berkshire, Rev. E. W. L. Davies, Digby Collins, and Alfred E. T. Watson. [The Badminton Library.] Boston: Little, Brown & Co. 1885. 8vo, pp. 373.

These volumes are of the new Badminton Series of Sports and Pastimes (so named from the home of their editor, the Duke of Beaufort), which is to comprise books on hunting, racing, and other amusements of Anglo-Saxons. The Duke, a good representative of the hereditary English sportsman, has for the first two volumes under notice gathered his materials from the best attainable authorities, Mr. Cholmondeley-Pennell being assisted by articles from Mr. Francis, Major Traherne, William Senior, G. Christopher Davies, Mr. Marston, of the *Fishing Gazette*, and other less-known writers. The editorial part is limited to a few notes on salmon fishing and flies, good enough in their way, gathered from experience on the Canadian rivers in 1879 and '80, and the "Dedication to H. R. H. the Prince of Wales," in which his Grace seems so overpowered by the condescension of the noble personage in granting the privilege, that he gives loose rein to his loyal adulation, and easily makes out the Prince to be the admirable Crichton of the sporting world. Mr. Pennell (we will for convenience now and hereafter omit the long prefix) begins with a chapter on tackle and fishing gear, in which the old as well as new inventions in these articles are mentioned and criticised from the point of personal experience. Regarding salmon and trout hooks, Mr. Pennell says: "What promises to be the most important by far of these novelties (I use the word in its relative sense, for the idea is not new, but old) is the attaching of the fly to the casting line by means of a metal loop or eye." This loop or eye is slightly turned up at the head of the hook shank, and of course does away with the necessity of whipping the gut loop on the hook. The loops are nearly always the first part of a salmon fly to give out, and, unlike a tattered wing or chewed-up body, when frayed or broken cannot be repaired, and render the most beautiful fly utterly useless. Mr. Pennell prefers the hooks with the eye turned down toward the point rather than away from it. These are now being made after his patterns at Redditch, with the additional improvement of being rust-proof.

Casting lines, lines, rods, and reels in their turn receive intelligent and skilful treatment, some recent inventions in the last-named articles being commended; and on the subject of anglers' clothing there are some excellent ideas for ladies, who more and more are coming to the use of the rod. We quote the hints for dress given Mr. Pennell by "a lady of large practical experience":

"Short skirts of linsy woolsey made as simply as possible, Norfolk jacket made of all wool material, a comfortable, close-fitting toque which does not catch the wind—the costume to be of one color, say a nice heather mixture or whitish gray. Boots should be made of porpoise hide, with honest broad soles with plenty of room for the toes, and flat heels. They should lace, as men's boots do, and come well up the leg. Length of skirt an inch or so above the ankle. All wool undergarments should be worn, from stockings upwards."

The chapter on "Natural History of British Salmonidæ" gives the latest discoveries in that interesting department of ichthyology, and the "Proved Facts in the History of Salmon" (pp. 112 to 115) set forth in an admirably condensed form the present state of positive knowledge on the subject. Among these is stated the fact of

the irregular migration of these fish, which explains many apparent anomalies in their existence, and should, and undoubtedly will, greatly influence future fishery legislation. We consider this chapter of Mr. Pennell's to be the best offering of late years to the knowledge of the history and habits of the salmon, from the economic view as well as from that of the angler.

Following it is the paper of Major Traherne on "Salmon Fishing with the Fly," and no more able or experienced hand could have been chosen to treat this alluring topic. We know from other sources than Mr. Pennell that "a safer pilot through the shoals and quicksands of the art, or a more experienced and practical exponent of its mysteries, cannot be found within the three seas that girth Britain." Incidentally (for the true angler must be something of a naturalist), and before getting to the sport itself, Major Traherne supplements the previous chapter of Mr. Pennell. He disagrees with the commonly accepted theory that salmon do not feed in fresh water, believing that their stomachs being always empty when caught comes from the habit of ejecting their food when in trouble. The various reasons for this view we have not space to give, but to our mind they are ample to sustain it. We will not begin quoting from Major Traherne's charming dissertation, but simply advise every one who has ever cast a fly, or has it in his mind to do so, to read it, and also the chapter following, by Mr. Francis, on "Thames Trout Fishing." The Thames trout being a fish of huge growth, surpassing intelligence, and great rarity, the skill and patience required to catch him are only gained by years of experience. This volume ends with Mr. Andrews's article on "Trout and Salmon Culture," making with its companions a full and well-rounded treatise on salmon and trout, their history, habits, and the most scientific methods of propagating and taking them, nearly all of which is as well adapted to the wants of the American as the British angler.

The second volume, being devoted to "Pike and Other Coarse Fish," is less interesting to the reader in this country. Nearly half of it is occupied with Mr. Pennell's exhaustive chapters on the pike, which in England takes a much more prominent place in the angler's mind than here. Spinning for pike has, largely owing to Mr. Pennell's enthusiasm, assumed in Great Britain a scientific interest hardly second to fly fishing, and the author gives us a résumé of his various preceding books on the subject, with much new material, and many tales of personal adventure. Mr. Davies, the author of "Norfolk Broads and Rivers," contributes an article on the fishing thereof, and the Marquis of Exeter tapers off the volume with his notes on "Fish Acclimatization," especially that of black bass, which his pisciculturist, Mr. Silk, has been twice or more to this country to procure, and not always by commendable methods. The American black bass seems to be thriving well in the various British waters where he has been introduced, although our trout has thus far absolutely refused to make himself at home in the streams across the Atlantic.

Few Americans know or care much about the chase, except it may be from a literary point of view, and for the reason that it has a large place in the minds of our kindred over the sea. To these the Duke of Beaufort's account of the ways in which the British manage to extract pleasure from the labor of slowly killing several kinds of beasts will prove entertaining. The solemn manner in which this amusement is undertaken is well shown by the list of contributors who have shared in the preparation of this little book. With all this collaboration the work is only moderately well done. Thirty-five pages suffice to give a good outline of the history of the chase in England; but there is nothing about the art in other countries, though much light on English customs could be found elsewhere than in the British Isles. Virginia customs, for instance, especially in hunting the fox, show to this day a survival of some curious habits which have been extinguished by the modern and costly methods adopted in the mother country. The sections of the book which treat of the chase of the stag, the hare, the fox, and the otter, give about all that can be set forth concerning arts whose practice is everything. Only about one-quarter of the book is taken up by the description of that part of the art which is practised in the field. The remainder is devoted to the discussion of matters connected with the stable, the kennel, the duties of hunt servants, the training of horse and rider, and the description of the famous hunting shires of England. An appendix of forty pages contains a full list of hounds, their masters, huntsmen, whips, etc. Six pages are devoted to an alphabetical list of the approved names of dogs and bitches. There is also a tolerable bibliography, limited to English books, and a glossary of hunting terms which is not complete. The singular phrase "to take soil," which means, oddly enough, 'to take to water,' is not given. So, too, the term "stifled," as applied to a hound, which will not be clear to the non-sporting reader, is wanting in the glossary.

The chapters on the horse and the rider are the poorest parts of the book. The beginner will not find much in them that he can use, and the old hand will not profit by their discussion and treatment of difficult subjects. The style of the writers is not pleasing. There seem to be too many cooks for the broth: parts of the book are soberly and tersely written; others abound in weak rhapsody. The considerate reader will find use for this "Badminton" series of sporting books. They will give him a measure of that arduous play which is absorbing so much of the energy of the upper class in the richest and most cultivated state the world has ever known. This age of many things is above all an age of organized out-door sport. So far the systematic playing of the English peoples has been helpful to them, cruel though it may be; but it is a question whether the limits of profitable growth in this direction have not been reached.

We will say for the benefit of collectors that there is a limited English large-paper edition of the Badminton Series—beautiful in paper, print, and illustration.

The Land and the Book; or, Biblical Illustrations drawn from the Manners and Customs, the Scenes and Scenery, of the Holy Land. *Lebanon, Damascus, and Beyond Jordan.* By William M. Thomson, D.D. 147 illustrations and maps. Harper & Brothers.

A WRITER who combines a lively sense for the striking and picturesque in nature and uncultured life with great familiarity with the Bible, will easily delight his readers if he cultivates a plain style and chooses Eastern subjects for description. Doctor Thomson, who possesses that combination in an eminent degree, and has, moreover, spent his life in Bible lands, cannot fail to charm us with his easy talk and light sketches of things seen and learned in "the Land and the Book." This is his "last" volume under that title, and it is fresh, quickening to feeling and fancy, and redolent of simplicity and the fragrance of the field. There may be some flagging in the descriptive powers of the veteran missionary, but he is still wide-awake in observing the grand and the minute, and his wonted plainness and directness of diction, modelled on the Scriptures, in which the naïve so often borders on the sublime, and his inexhaustible stock of Biblical and other Oriental reminiscence, prevent his pages from declining to the level of descriptions devoid of tints and of poetry. Nothing is more artless than the following, but how attractive it is to every reader, and how full of meaning to him who remembers the words of the Psalms, the Song, Isaiah, etc., to which it alludes:

"Lebanon is . . . mentioned by David, Solomon, Isaiah, and other sacred poets and prophets, who refer to its most striking features and characteristics. They speak of the head, the countenance, the sides, the roots of Lebanon; and of the snow, and the streams that run amongst the valleys. They sing of the glory of Lebanon, and the smell of its forests—the cedar, the fir, the pine, and the box together; and of the birds that sing amongst the branches. To the ancient seer, poet, and prophet Lebanon was a goodly mountain, which they delighted to praise; and goodly is still its most appropriate title of distinction. The Arabs say that Lebanon bears winter on his head, spring on his shoulders, and autumn in his lap, while summer lies at his feet."

Or can there be a pleasanter way of presenting botanical information, garnished with Biblico-homiletical remarks, than in the following observations on the olive-tree?

"The olive-tree is of slow growth, and the husbandman must have long patience. Except under circumstances peculiarly favorable, it bears no berries until the seventh year, nor is the crop worth much until the tree is ten or fifteen years old; but then 'the labor of the olive' is very profitable, although it sometimes 'fails,' as implied in the prayer of Habakkuk, and it will continue to yield its fruit to extreme old age, like the excellent of the earth. So long as there is a mere fragment remaining, . . . for twenty generations the owners gather fruit from the faithful old patriarch. . . . Vineyards forsaken die out almost immediately, and mulberry orchards neglected run rapidly to ruin, but not so the olive. I saw the desolate hills of Jebel el A'alah, above Antioch, covered with such groves, although no one had paid attention to them for half a century.

"It is upon this tenacity of life in the olive that Job bases his affecting comparison in regard to the frailty of man: 'There is hope of a tree, if it be cut down, that it will sprout again, and that the tender branch thereof will not cease. . . .'

"That tree will . . . revive 'through the scent of water,' after the root has waxed old in the earth, and the stock, to all appearances, become entirely dead . . ."

The volume before us is less properly descriptive of "the Land" than its predecessors, which treated of Southern Palestine, and Central Palestine and Phœnicia. The contents of this embrace undated tours from Sidon to Beirut and through its surroundings; through Southern Lebanon and "the Cedars"; to Baalbek, Damascus, Kunawat, Bozrah, Dera, Jerash, Ajlun, Es-Salt, Amman, and Ayun Musa. There is less Biblical illustration, but much greater variety, and more matter of classical and modern interest. The illustrations—designed from photographs of living subjects, or composed from photographs taken by the author and by the British and American exploration societies—are uncommonly attractive and characteristic. Doctor Thomson's critical sense, as to Biblical matters, has not grown more acute than its former productions showed it to be, and his memory may occasionally play him a trick, as when he speaks of Beirut being mentioned "under its Greek name of Berytus, by Strabo," in "the second century of our era" (p. 45)—Strabo died in the early part of the first; but he continues to gather fresh information even from sources but very recently accessible, and now and then conflicting with the Scriptural authorities, like the cuneiform monumental inscriptions. A slight vein of sceptical humor, even, is discernible in his remarks, as when he says that "the progress of civilization, and the general spread of education in this country, have robbed the prophet of much of his prestige and patronage"—of course a Moslem prophet is meant; or, which is worse, that "Jacob vowed a vow at Bethel, as you remember, which reads very like one of those carefully

conditioned contracts in the drawing up of which his descendants have always been so celebrated." The "you" in the sentence reminds us of the frequent and rather strange use by the author of the same pronoun in application to himself or to an imaginary interlocutor—introduced abruptly and without quotation marks—who asks questions and is answered thus:

"Moses speaks of 'oil out of the flint'; and I had supposed that the tree delighted in hard, rocky soil; but this vast grove spreads over a soft and sandy plain.

"You were not mistaken—only misled by appearances. . . .

"St. Paul has an extended reference to grafting. . . . The olive, says the apostle—and so you say—is wild by nature. . . .

"True; but observe, . . . " etc.

The volume deserves a more extensive notice, but it is not long since we devoted a review to the preceding part of 'The Land and the Book' (No. 916 of the *Nation*), and to that we refer our readers for further characteristics of the now complete work.

BOOKS OF THE WEEK.

Abbot, F. E. Scientific Theism. Boston: Little, Brown & Co.
